Receipt
The samples were received on 11/8/2022 4:20 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 7 coolers at receipt time were 1.7º C, 2.2º C, 2.6º C, 3.1º C, 3.3º C, 3.7º C and 3.7º C.

Receipt Exceptions

The laboratory received 250 ml plastic with HNO3 instead of 250 ml unpreserved plastic container for dissolved metals analysis on the following sample: B1BMP009_20221108 (570-116265-1), B1BMP010_20221108 (570-116265-2), B1BMP011_20221108 (570-116265-3), ILBMP004_20221108 (570-116265-4), ILBMP005_20221108 (570-116265-5), ILBMP008_20221108 (570-116265-6), LPBMP0002_20221108 (570-116265-7), LPBMP0003_20221108 (570-116265-8), LPBMP0004_20221108 (570-116265-9), LPBMP0002_DUP_20221108 (570-116265-10) and EPSW001IE01_20221108 (570-116265-11).

Aliquot was taken from 1L Amber glass container for dissolved metals.

The following sample: #9F for job# 570-116265 has a cracked lid, which could not be replaced. Container lid was taped up to prevent leakage or volume loss. There was no leakage or volume lost. LPBMP0004_20221108 (570-116265-9)

HPLC/IC
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method 200.7 Rev 4.4: The method blank for preparation batch 570-280630 and analytical batch 570-280926 contained Manganese above the method detection limit. This target analyte concentration was less than the reporting limit (RL) or greater than 10X the value found in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

Method 200.8: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 570-279970 and analytical batch 570-280249 were outside control limits for Cadmium, Copper and Lead. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method Filtration: The following samples were not filtered within 15 minutes of sample collection as required by the method: B1BMP009_20221108 (570-116265-1), B1BMP010_20221108 (570-116265-2), B1BMP011_20221108 (570-116265-3), ILBMP004_20221108 (570-116265-4), ILBMP005_20221108 (570-116265-5), ILBMP008_20221108 (570-116265-6), LPBMP0002_20221108 (570-116265-7), LPBMP0003_20221108 (570-116265-8), LPBMP0004_20221108 (570-116265-9), LPBMP0002_DUP_20221108 (570-116265-10) and EPSW001IE01_20221108 (570-116265-11). The sample(s) was filtered prior to analysis at the laboratory, and the results have been reported.

Method D4464: The sample duplicate precision for the following sample associated with analytical batch 570-283613 was flagged as being outside control limits due to a L.I.M.S. limitation: (570-116458-A-2) and (570-116458-A-2 DU). The mean grain size for the sample and sample duplicate were within RPD acceptance criteria. Method D4464.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Receipt
The samples were received on 11/8/2022 4:20 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 7 coolers at receipt time were 1.7º C, 2.2º C, 2.6º C, 3.1º C, 3.3º C, 3.7º C and 3.7º C.

Receipt Exceptions
The laboratory received 250 ml plastic with HNO3 instead of 25 ml unpreserved plastic container for dissolved metals analysis on the following sample: B1BMP009_20221108 (570-116265-1), B1BMP010_20221108 (570-116265-2), B1BMP011_20221108 (570-116265-3), ILBMP0004_20221108 (570-116265-4), ILBMP0005_20221108 (570-116265-5), ILBMP0008_20221108 (570-116265-6), LPBMP0002_20221108 (570-116265-7), LPBMP0003_20221108 (570-116265-8), LPBMP0004_20221108 (570-116265-9), LPBMP0002_DUP_20221108 (570-116265-10) and EPSW001IE01_20221108 (570-116265-11). The client was contacted, and the lab was instructed to <EXPLANATION_REQUIRED>.
Alequot was taken from 1L Amber glass container.

The following sample: #9F for job# 570-116265 has a cracked lid, which could not be replaced. Container lid was taped up to prevent leakage or volume loss. There was no leakage or volume was lost. LPBMP0004_20221108 (570-116265-9)

Method 1613B: EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV). The 13C-1,2,3,4-TCDD associated with the following samples run on instrument DFS 1 exceeded this criteria: B1BMP009_20221108 (570-116265-1), B1BMP010_20221108 (570-116265-2), B1BMP011_20221108 (570-116265-3), ILBMP0004_20221108 (570-116265-4), ILBMP0005_20221108 (570-116265-5), ILBMP0008_20221108 (570-116265-6), LPBMP0002_20221108 (570-116265-7), (CCV 320-636198/1), (LCS 320-635089/2-A), (LCSD 320-635089/3-A) and (MB 320-635089/1-A). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

Receipt
The samples were received on 11/8/2022 4:20 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 7 coolers at receipt time were 1.7º C, 2.2º C, 2.6º C, 3.1º C, 3.3º C, 3.7º C and 3.7º C.

RAD
Methods 900.0, 9310: Gross Alpha and Gross Beta batch 592268
The detection goal was not met for the following samples due to a reduction of the sample size attributed to high residual mass: (680-225093-L-2-A) and (680-225093-L-2-D DU). Analytical results are reported with the detection limit achieved.

Methods 900.0, 9310: Gross Alpha and Gross Beta batch 592268
Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date
EPSW001IE01_20221108 (570-116265-11), (LCS 160-592268/2-A), (MB 160-592268/1-A), (680-225093-L-2-A), (680-225093-L-2-D DU) and (680-225093-L-2-B MS)

Method 901.1: Gamma Prep Batch 160-590201
Many isotopes requested for analysis do not have any gamma emissions, or the gamma emissions they do have are very poor. Often, such analytes are reported by gamma spectrometry assuming secular equilibrium with a longer-lived parent. The client should ensure that such inference is acceptable for their sample based upon process knowledge. The following assumptions were made for this report:

Inferred from	Reported to Analyte
Th-234	Pa-234
Th-234	U-238
Pb-210	Po-210
Pb-210	Bi-210

Revision
The report being provided is a revision of the original report sent on 12/24/2022. The report (revision 1) is being revised due to: The metals reporting was adjusted to report all elements by EPA 200.8..

Receipt
The samples were received on 12/12/2022 5:10 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 3.1º C and 3.9º C.

HPLC/IC
Method 300.0: The native sample, matrix spike, and matrix spike duplicate (MS/MSD) associated with analytical batch 570-291037 were performed at the same dilution. Due to the additional level of analyte present in the spiked samples, the concentration of Sulfate in the MS/MSD was above the instrument calibration range. The data have been reported and qualified.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method 200.8: The method blank for preparation batch 570-289608 and analytical batch 570-289839 contained Iron above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method 200.8: The method blank for preparation batch 570-289608 and analytical batch 570-289839 contained Iron above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method 200.8: The method blank for preparation batch 570-289012 and analytical batch 570-289311 contained Iron above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method Filtration: The following sample was not filtered within 15 minutes of sample collection as required by the method: EPSW001IE01_20221211 (570-120461-1). The sample(s) was filtered prior to analysis at the laboratory, and the results have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Receipt
The samples were received on 12/12/2022 5:10 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 3.1º C and 3.9º C.

Receipt Exceptions

The reference method requires samples to be preserved to a pH of <2 SU. The following sample was received with insufficient preservation at a pH of >2 SU: EPSW001IE01_20221211 (570-120461-1). 570-120461-K-1. The sample was preserved to the appropriate pH in the laboratory.

Dioxin
Method 1613B: The continuing calibration verification (CCV) associated with batch 320-648563 recovered above the upper control limit for 2,3,7,8-TCDF. The samples associated with this CCV had no detection over the reporting limit (RL) for the affected analyte and samples with any estimated detections below the reporting limit were analyzed on a second column for confirmation; therefore, the data have been reported.

Method 1613B: EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV). The 13C-1,2,3,4-TCDD associated with the following samples run on instrument 11D2 exceeded this criteria: EPSW001IE01_20221211 (570-120461-1), (CCV 320-648980/2) and (MB 320-644230/1-A). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

Method 1613B: The continuing calibration verification (CCV) associated with batch 320-648980 recovered above the upper control limit for the surrogate 37Cl4-2,3,7,8-TCDD. The surrogate is not used in the quantitation of any target analytes but used to monitor the efficiency of any cleanup steps done during the extraction process. The samples associated with this CCV were within limits for the surrogate; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Dioxin Prep
Method 1613B: Elevated reporting limits are provided for the following sample due to insufficient sample provided for preparation: EPSW001IE01_20221211 (570-120461-1). Nominal volume is 1L.

preparation batch 320-644230
Method: 1613B_Sox_Sep_P
Matrix: Water

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Receipt
The samples were received on 12/12/2022 5:10 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 3.1º C and 3.9º C.

Receipt Exceptions

The reference method requires samples to be preserved to a pH of <2 SU. The following sample was received with insufficient preservation at a pH of >2 SU: EPSW001IE01_20221211 (570-120461-1). 570-120461-K-1. The sample was preserved to the appropriate pH in the laboratory.

RAD
Methods 900.0, 9310: Gross alpha/beta prep batch 160-595066:

The duplicate associated with the following samples failed precision for gross beta. The gross alpha precision passed. There is a potential matrix interference present. (680-227905-E-2-A) and (680-227905-E-2-D DU)

Method 901.1: Gamma prep batch 160-594076:

Many isotopes requested for analysis do not have any gamma emissions, or the gamma emissions they do have are very poor. Often, such analytes are reported by gamma spectrometry assuming secular equilibrium with a longer-lived parent. The client should ensure that such inference is acceptable for their sample based upon process knowledge. The following assumptions were made for this report:

Inferred from	Reported to Analyte
Th-234	Pa-234
Th-234	U-238
Pb-210	Po-210
Pb-210	Bi-210

Bi-214	Ra-226

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative.

Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

Receipt
The samples were received on 12/12/2022 5:10 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.8º C and 2.1º C.

Receipt Exceptions

The laboratory received 250 ml plastic with HNO3 instead of 250 ml unpreserved plastic container for dissolved metals analysis on the following sample: A1BMP0002_20221211 (570-120466-1), A1BMP0003_20221211 (570-120466-2) and ILBMP0002_20221211 (570-120466-3). Aiquot was taken from 1L Amber glass container.

The laboratory received 1 L unpreserved Amber instead of 250 ml unpreserved clear glass 1631 Mercury container for dissolved Mercury analysis on the following sample: A1BMP0002_20221211 (570-120466-1), A1BMP0003_20221211 (570-120466-2) and ILBMP0002_20221211 (570-120466-3). Aliquott was taken from 1L Amber glass container.

The clients office was contacted with the above sample receipt anomalies. The laboratory was provided written direction on how to proceed, please refer to the COC section of the report for further details.

Katherine and/or Mark –

The lab had the following receipt items for the subject job: 570-120466

570-120466 –

A. The laboratory received 250 ml plastic with HNO3 instead of 250 ml unpreserved plastic container for dissolved metals analysis on the following samples:

A1BMP0002_20221211 (570-120466-1),
A1BMP0003_20221211 (570-120466-2),
ILBMP0002_20221211 (570-120466-3).

The laboratory used one of the 1 Liter ambers to pour off an aliquot for Dissolved Metals into 1 x 250ml poly unpreserved container

B. The laboratory received 1 L unpreserved Amber instead of 250 ml unpreserved clear glass 1631 Mercury container for dissolved Mercury analysis on the following samples:

A1BMP0002_20221211 (570-120466-1),
A1BMP0003_20221211 (570-120466-2),
ILBMP0002_20221211 (570-120466-3).

The laboratory used the 1 Liter ambers to pour off an aliquot for Dissolved Mercury into 1 x 250ml amber unpreserved container

Please confirm the above actions taken are acceptable and the lab is to proceed with testing.

Receipt
The samples were received on 12/12/2022 5:10 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.8º C and 2.1º C.

Receipt Exceptions

The laboratory received 250 ml plastic with HNO3 instead of 250 ml unpreserved plastic container for dissolved metals analysis on the following sample: A1BMP0002_20221211 (570-120466-1), A1BMP0003_20221211 (570-120466-2) and ILBMP0002_20221211 (570-120466-3). Aiquot was taken from 1L Amber glass container.

The laboratory received 1 L unpreserved Amber instead of 250 ml unpreserved clear glass 1631 Mercury container for dissolved Mercury analysis on the following sample: A1BMP0002_20221211 (570-120466-1), A1BMP0003_20221211 (570-120466-2) and ILBMP0002_20221211 (570-120466-3). Aliquott was taken from 1L Amber glass container.

The clients office was contacted with the above sample receipt anomalies. The laboratory was provided written direction on how to proceed, please refer to the COC section of the report for further details.

Metals
Method 1631E: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 580-413631 were outside control limits for one or more analytes, see QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Katherine and/or Mark –

The lab had the following receipt items for the subject job: 570-120466

570-120466 –

A. The laboratory received 250 ml plastic with HNO3 instead of 250 ml unpreserved plastic container for dissolved metals analysis on the following samples:

A1BMP0002_20221211 (570-120466-1),
A1BMP0003_20221211 (570-120466-2),
ILBMP0002_20221211 (570-120466-3).

The laboratory used one of the 1 Liter ambers to pour off an aliquot for Dissolved Metals into 1 x 250ml poly unpreserved container

B. The laboratory received 1 L unpreserved Amber instead of 250 ml unpreserved clear glass 1631 Mercury container for dissolved Mercury analysis on the following samples:

A1BMP0002_20221211 (570-120466-1),
A1BMP0003_20221211 (570-120466-2),
ILBMP0002_20221211 (570-120466-3).

The laboratory used the 1 Liter ambers to pour off an aliquot for Dissolved Mercury into 1 x 250ml amber unpreserved container

Please confirm the above actions taken are acceptable and the lab is to proceed with testing.

Receipt
The samples were received on 12/12/2022 5:10 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.8º C and 2.1º C.

Receipt Exceptions

The laboratory received 250 ml plastic with HNO3 instead of 250 ml unpreserved plastic container for dissolved metals analysis on the following sample: A1BMP0002_20221211 (570-120466-1), A1BMP0003_20221211 (570-120466-2) and ILBMP0002_20221211 (570-120466-3). Aiquot was taken from 1L Amber glass container.

The laboratory received 1 L unpreserved Amber instead of 250 ml unpreserved clear glass 1631 Mercury container for dissolved Mercury analysis on the following sample: A1BMP0002_20221211 (570-120466-1), A1BMP0003_20221211 (570-120466-2) and ILBMP0002_20221211 (570-120466-3). Aliquott was taken from 1L Amber glass container.

The clients office was contacted with the above sample receipt anomalies. The laboratory was provided written direction on how to proceed, please refer to the COC section of the report for further details.

Dioxin
Method 1613B: The continuing calibration verification (CCV) associated with batch 320-648563 recovered above the upper control limit for 2,3,7,8-TCDF. The samples associated with this CCV had no detection over the reporting limit (RL) for the affected analyte and samples with any estimated detections below the reporting limit were analyzed on a second column for confirmation; therefore, the data have been reported.

Method 1613B: EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV). The 13C-1,2,3,4-TCDD associated with the following samples run on instrument 11D2 exceeded this criteria: EPNDSW04_20221211-02 (570-120466-5), (CCV 320-648980/2) and (MB 320-644230/1-A). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

Method 1613B: The continuing calibration verification (CCV) associated with batch 320-648980 recovered above the upper control limit for the surrogate 37Cl4-2,3,7,8-TCDD. The surrogate is not used in the quantitation of any target analytes but used to monitor the efficiency of any cleanup steps done during the extraction process. The samples associated with this CCV were within limits for the surrogate; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Dioxin Prep
Method 1613B: Elevated reporting limits are provided for the following samples due to insufficient sample provided for preparation: A1BMP0003_20221211 (570-120466-2), ILBMP0002_20221211 (570-120466-3) and EPNDSW04_20221211-02 (570-120466-5). Nominal volume is 1L.

Katherine and/or Mark –

The lab had the following receipt items for the subject job: 570-120466

570-120466 –

A. The laboratory received 250 ml plastic with HNO3 instead of 250 ml unpreserved plastic container for dissolved metals analysis on the following samples:

A1BMP0002_20221211 (570-120466-1),
A1BMP0003_20221211 (570-120466-2),
ILBMP0002_20221211 (570-120466-3).

The laboratory used one of the 1 Liter ambers to pour off an aliquot for Dissolved Metals into 1 x 250ml poly unpreserved container

B. The laboratory received 1 L unpreserved Amber instead of 250 ml unpreserved clear glass 1631 Mercury container for dissolved Mercury analysis on the following samples:

A1BMP0002_20221211 (570-120466-1),
A1BMP0003_20221211 (570-120466-2),
ILBMP0002_20221211 (570-120466-3).

The laboratory used the 1 Liter ambers to pour off an aliquot for Dissolved Mercury into 1 x 250ml amber unpreserved container

Please confirm the above actions taken are acceptable and the lab is to proceed with testing.

Note: Since laboratory accreditations are subject to change, Eurofins Calscience places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Calscience laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Calscience attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Calscience.

Receipt
The samples were received on 12/12/2022 5:10 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.8º C and 3.1º C.

Receipt Exceptions

The reference method requires samples to be preserved to a pH of <2 SU. The following sample was received with insufficient preservation at a pH of >2 SU: BGBMP0003_20221211 (570-120471-1). 570-120471-U-1. The sample was preserved to the appropriate pH in the laboratory.

The laboratory received 500 ml unpreserved plastic instead of 500 ml plastic W/NaOH container for CN analysis on the following sample: BGBMP0003_20221211 (570-120471-1). CN container was preserved at the lab..

The laboratory received 1 L unpreserved Amber instead of 250 ml unpreserved clear glass 1631 Mercury container for dissolved Mercury analysis on the following sample: BGBMP0003_20221211 (570-120471-1). Aliquott was taken from 1L Amber glass container.

The clients office was contacted with the above sample receipt anomalies. The laboratory was provided written direction on how to proceed, please refer to the COC section of the report for further details.

GC/MS VOA
Method 624.1: The following volatiles sample was diluted due to foaming at the time of purging during the original sample analysis: BGBMP0003_20221211 (570-120471-1). Elevated reporting limits (RLs) are provided.

Method 624.1: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-290331. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

HPLC/IC
Method 218.6: The following sample was received and analyzed outside of holding time: BGBMP0003_20221211 (570-120471-1).

Method 218.6: The following sample was received, filtered and analyzed outside of holding time: BGBMP0003_20221211 (570-120471-1).

Method 300.0: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 570-288811 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 300.0: The following sample was analyzed outside of analytical holding time due to the exceeded lab capacity as a result of the storm water event: BGBMP0003_20221211 (570-120471-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method 200.8: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 570-289608 and analytical batch 570-289839 were outside control limits for Aluminum. Sample matrix interference is suspected because the associated laboratory control

sample (LCS) recovery was within acceptance limits.

Method 200.8: The method blank for preparation batch 570-289608 and analytical batch 570-289839 contained Iron above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method Filtration: The following sample was not filtered within 15 minutes of sample collection as required by the method: BGBMP0003_20221211 (570-120471-1). The sample(s) was filtered prior to analysis at the laboratory, and the results have been reported.

Method Filtration: The following sample was not filtered within 15 minutes of sample collection as required by the method: BGBMP0003_20221211 (570-120471-1). The sample(s) was filtered prior to analysis at the laboratory, and the results have been reported.

Method Filtration: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 570-290587.

Method 200.7 Rev 4.4: The method blank for preparation batch 570-290587 and analytical batch 570-291076 contained Boron above the method detection limit. This target analyte concentration was less than the reporting limit (RL) or greater than 10X the value found in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
Method 625: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 570-289215. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch. Method 625.1 Sim

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Katherine and/or Mark –

The lab had the following receipt items for the subject job: 570-120471

570-120471 –

A. The laboratory received 500 ml unpreserved plastic instead of 500 ml plastic W/NaOH container for CN analysis on the following sample:
BGBMP0003_20221211 (570-120471-1).

The laboratory preserved the sample container with NaOH upon receipt at the lab.

B. The laboratory received 1 L unpreserved Amber instead of 250 ml unpreserved clear glass 1631 Mercury container for dissolved Mercury analysis on the following sample:
BGBMP0003_20221211 (570-120471-1).

The laboratory used the 1 Liter ambers to pour off an aliquot for Dissolved Mercury into 1 x 250ml amber unpreserved container

Please confirm the above actions taken are acceptable and the lab is to proceed with testing.

Virendra Patel

CAUTION: External Email

Thank you Katherine.

The BMP field teams need to revisit COC procedures as well please for the following:
-- We have receiving insufficient volume and/or incorrect containers/preservatives.
-- We would also request the teams use darker pens and write more diligently, sample IDs are hard to make out when they are hand writing them in.

I understand the field teams have a lot to manage already out in the field – Containers and preservatives may seem minor, but this can have an impact on your analytical program. We will do all we can to help mitigate any project failures.

Virendra Patel

Virendra,

I'll go over sample receipt proofing with our staff. The NPDES Permit sampling is reviewed to the analyte/RL, but we haven't been as diligent about our training with these BMP samples. As for Uranium, the NPDES permit sampling reports "Uranium" and we want to match that for these samples.

Total Uranium
Dissolved Uranium

Thanks for checking,
Katherine

Katherine –

Good Morning. For the attached COC – Uranium reporting, what analytes are required?

For both Dissolved/Total – are we to include the full list for each fraction or a subset list for Uranium reporting?
Uranium-232
Uranium-234
Uranium-235/236
Uranium-238
Total Uranium
Dissolved Uranium

We sent out the attached SRC documents post receipt – I just noticed the limits document had the target analyte lists varying between Total/Dissolved Uranium? We didn't receive any comments on this? Someone on the Haley distribution is reviewing the SRC documents post receipt, correct? If not, going forward, may we please ensure a review is made to ensure have the analytical program correct.

Please confirm on the analyte list required, so I can move forward with report finalization/reporting on J116265 later today. In advance, thank you.

Receipt
The samples were received on 12/12/2022 5:10 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.8º C and 3.1º C.

Receipt Exceptions

The reference method requires samples to be preserved to a pH of <2 SU. The following sample was received with insufficient preservation at a pH of >2 SU: BGBMP0003_20221211 (570-120471-1). 570-120471-U-1. The sample was preserved to the appropriate pH in the laboratory.

The laboratory received 500 ml unpreserved plastic instead of 500 ml plastic W/NaOH container for CN analysis on the following sample: BGBMP0003_20221211 (570-120471-1). CN container was preserved at the lab..

The laboratory received 1 L unpreserved Amber instead of 250 ml unpreserved clear glass 1631 Mercury container for dissolved Mercury analysis on the following sample: BGBMP0003_20221211 (570-120471-1). Aliquott was taken from 1L Amber glass container.

The clients office was contacted with the above sample receipt anomalies. The laboratory was provided written direction on how to proceed, please refer to the COC section of the report for further details.

Metals
Method 1631E: The matrix spike duplicate (MSD) recoveries for analytical batch 580-413631 were outside control limits for one or more analytes, see QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 1631E: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 580-413631 were outside control limits for one or more analytes, see QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Katherine and/or Mark –

The lab had the following receipt items for the subject job: 570-120471

570-120471 –

A. The laboratory received 500 ml unpreserved plastic instead of 500 ml plastic W/NaOH container for CN analysis on the following sample:
BGBMP0003_20221211 (570-120471-1).

The laboratory preserved the sample container with NaOH upon receipt at the lab.

B. The laboratory received 1 L unpreserved Amber instead of 250 ml unpreserved clear glass 1631 Mercury container for dissolved Mercury analysis on the following sample:
BGBMP0003_20221211 (570-120471-1).

The laboratory used the 1 Liter ambers to pour off an aliquot for Dissolved Mercury into 1 x 250ml amber unpreserved container

Please confirm the above actions taken are acceptable and the lab is to proceed with testing.

CAUTION: External Email

Thank you Katherine.

The BMP field teams need to revisit COC procedures as well please for the following:
-- We have receiving insufficient volume and/or incorrect containers/preservatives.
-- We would also request the teams use darker pens and write more diligently, sample IDs are hard to make out when they are hand writing them in.

I understand the field teams have a lot to manage already out in the field – Containers and preservatives may seem minor, but this can have an impact on your analytical program. We will do all we can to help mitigate any project failures.

Virendra Patel

Virendra,

I'll go over sample receipt proofing with our staff. The NPDES Permit sampling is reviewed to the analyte/RL, but we haven't been as diligent about our training with these BMP samples. As for Uranium, the NPDES permit sampling reports "Uranium" and we want to match that for these samples.

Total Uranium
Dissolved Uranium

Thanks for checking,
Katherine

Katherine –

Good Morning. For the attached COC – Uranium reporting, what analytes are required?

For both Dissolved/Total – are we to include the full list for each fraction or a subset list for Uranium reporting?
Uranium-232
Uranium-234
Uranium-235/236
Uranium-238
Total Uranium
Dissolved Uranium

We sent out the attached SRC documents post receipt – I just noticed the limits document had the target analyte lists varying between Total/Dissolved Uranium? We didn't receive any comments on this? Someone on the Haley distribution is reviewing the SRC documents post receipt, correct? If not, going forward, may we please ensure a review is made to ensure have the analytical program correct.

Please confirm on the analyte list required, so I can move forward with report finalization/reporting on J116265 later today. In advance, thank you.

q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.

Receipt
The samples were received on 12/12/2022 5:10 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.8º C and 3.1º C.

Dioxin
Method 1613B: The continuing calibration verification (CCV) associated with batch 320-648563 recovered above the upper control limit for 2,3,7,8-TCDF. The samples associated with this CCV had no detection over the reporting limit (RL) for the affected analyte and samples with any estimated detections below the reporting limit were analyzed on a second column for confirmation; therefore, the data have been reported.

Method 1613B: EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV). The 13C-1,2,3,4-TCDD associated with the following samples run on instrument 11D2 exceeded this criteria: BGBMP0003_20221211 (570-120471-1), (CCV 320-648980/2) and (MB 320-644230/1-A). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

Method 1613B: The continuing calibration verification (CCV) associated with batch 320-648980 recovered above the upper control limit for the surrogate 37Cl4-2,3,7,8-TCDD. The surrogate is not used in the quantitation of any target analytes but used to monitor the efficiency of any cleanup steps done during the extraction process. The samples associated with this CCV were within limits for the surrogate; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Katherine and/or Mark –

The lab had the following receipt items for the subject job: 570-120471

570-120471 –

A. The laboratory received 500 ml unpreserved plastic instead of 500 ml plastic W/NaOH container for CN analysis on the following sample:
BGBMP0003_20221211 (570-120471-1).

The laboratory preserved the sample container with NaOH upon receipt at the lab.

B. The laboratory received 1 L unpreserved Amber instead of 250 ml unpreserved clear glass 1631 Mercury container for dissolved Mercury analysis on the following sample:
BGBMP0003_20221211 (570-120471-1).

The laboratory used the 1 Liter ambers to pour off an aliquot for Dissolved Mercury into 1 x 250ml amber unpreserved container

Please confirm the above actions taken are acceptable and the lab is to proceed with testing.

CAUTION: External Email

Thank you Katherine.

The BMP field teams need to revisit COC procedures as well please for the following:
-- We have receiving insufficient volume and/or incorrect containers/preservatives.
-- We would also request the teams use darker pens and write more diligently, sample IDs are hard to make out when they are hand writing them in.

I understand the field teams have a lot to manage already out in the field – Containers and preservatives may seem minor, but this can have an impact on your analytical program. We will do all we can to help mitigate any project failures.

Virendra Patel

Virendra,

I'll go over sample receipt proofing with our staff. The NPDES Permit sampling is reviewed to the analyte/RL, but we haven't been as diligent about our training with these BMP samples. As for Uranium, the NPDES permit sampling reports "Uranium" and we want to match that for these samples.

Total Uranium
Dissolved Uranium

Thanks for checking,
Katherine

Katherine –

Good Morning. For the attached COC – Uranium reporting, what analytes are required?

For both Dissolved/Total – are we to include the full list for each fraction or a subset list for Uranium reporting?
Uranium-232
Uranium-234
Uranium-235/236
Uranium-238
Total Uranium
Dissolved Uranium

We sent out the attached SRC documents post receipt – I just noticed the limits document had the target analyte lists varying between Total/Dissolved Uranium? We didn't receive any comments on this? Someone on the Haley distribution is reviewing the SRC documents post receipt, correct? If not, going forward, may we please ensure a review is made to ensure have the analytical program correct.

Please confirm on the analyte list required, so I can move forward with report finalization/reporting on J116265 later today. In advance, thank you.

Receipt
The samples were received on 12/12/2022 5:10 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.8º C and 3.1º C.

Receipt Exceptions

The reference method requires samples to be preserved to a pH of <2 SU. The following sample was received with insufficient preservation at a pH of >2 SU: BGBMP0003_20221211 (570-120471-1). 570-120471-U-1. The sample was preserved to the appropriate pH in the laboratory.

The laboratory received 500 ml unpreserved plastic instead of 500 ml plastic W/NaOH container for CN analysis on the following sample: BGBMP0003_20221211 (570-120471-1). CN container was preserved at the lab..

The laboratory received 1 L unpreserved Amber instead of 250 ml unpreserved clear glass 1631 Mercury container for dissolved Mercury analysis on the following sample: BGBMP0003_20221211 (570-120471-1). Aliquott was taken from 1L Amber glass container.

The clients office was contacted with the above sample receipt anomalies. The laboratory was provided written direction on how to proceed, please refer to the COC section of the report for further details.

Methods 900.0, 9310: Gross alpha/beta prep batch 160-595066:

Method 901.1: Gamma prep batch 160-594076:

Many isotopes requested for analysis do not have any gamma emissions, or the gamma emissions they do have are very poor. Often, such analytes are reported by gamma spectrometry assuming secular equilibrium with a longer-lived parent. The client should ensure that such inference is acceptable for their sample based upon process knowledge. The following assumptions were made for this report:

The Ra-228 laboratory control sample duplicate (LCSD) associated with the following samples recovered at 140%: (LCSD 160-594370/5-A). The limits in our LIMS system at 75-125% reflect the requirements of a regulatory agency that represents a large amount of our work. However the samples associated with this LCSD are not from this agency and are therefore held to our in-house statistical limits of 62-148% per method requirements. The LCSD is within criteria and no further action is required.

Katherine and/or Mark –

The lab had the following receipt items for the subject job: 570-120471

570-120471 –

A. The laboratory received 500 ml unpreserved plastic instead of 500 ml plastic W/NaOH container for CN analysis on the following sample:
BGBMP0003_20221211 (570-120471-1).

The laboratory preserved the sample container with NaOH upon receipt at the lab.

B. The laboratory received 1 L unpreserved Amber instead of 250 ml unpreserved clear glass 1631 Mercury container for dissolved Mercury analysis on the following sample:
BGBMP0003_20221211 (570-120471-1).

The laboratory used the 1 Liter ambers to pour off an aliquot for Dissolved Mercury into 1 x 250ml amber unpreserved container

Please confirm the above actions taken are acceptable and the lab is to proceed with testing.

Thank you Katherine.

The BMP field teams need to revisit COC procedures as well please for the following:
-- We have receiving insufficient volume and/or incorrect containers/preservatives.
-- We would also request the teams use darker pens and write more diligently, sample IDs are hard to make out when they are hand writing them in.

I understand the field teams have a lot to manage already out in the field – Containers and preservatives may seem minor, but this can have an impact on your analytical program. We will do all we can to help mitigate any project failures.

Virendra Patel

Virendra,

I'll go over sample receipt proofing with our staff. The NPDES Permit sampling is reviewed to the analyte/RL, but we haven't been as diligent about our training with these BMP samples. As for Uranium, the NPDES permit sampling reports "Uranium" and we want to match that for these samples.

Total Uranium
Dissolved Uranium

Thanks for checking,
Katherine

Katherine –

Good Morning. For the attached COC – Uranium reporting, what analytes are required?

For both Dissolved/Total – are we to include the full list for each fraction or a subset list for Uranium reporting?
Uranium-232
Uranium-234
Uranium-235/236
Uranium-238
Total Uranium
Dissolved Uranium

We sent out the attached SRC documents post receipt – I just noticed the limits document had the target analyte lists varying between Total/Dissolved Uranium? We didn't receive any comments on this? Someone on the Haley distribution is reviewing the SRC documents post receipt, correct? If not, going forward, may we please ensure a review is made to ensure have the analytical program correct.

Please confirm on the analyte list required, so I can move forward with report finalization/reporting on J116265 later today. In advance, thank you.

Receipt
The samples were received on 1/4/2023 5:25 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 1.9º C, 2.1º C, 2.3º C and 2.8º C.

Dioxin
Method 1613B: The continuing calibration verification (CCV) associated with batch 320-650252 recovered above the upper control limit for isotope dilution analyte (IDA) 13C-1,2,3,4,7,8-HxCDD. The samples associated with this CCV are in control for this IDA. The associated laboratory control spike and laboratory control spike duplicate are in control for the native analyte 1,2,3,4,7,8-HxCDD; therefore, the data have been reported. The associated samples are impacted: ILBMP0004_20230103 (570-122524-1), ILBMP0005_20230103 (570-122524-2), ILBMP0008_20230103 (570-122524-3), LPBMP0002_20230103 (570-122524-4), LPBMP0003_20230103 (570-122524-5), LBBMP0004_20230103 (570-122524-6), (CCV 320-650252/1), (LCS 320-646600/2-A) and (LCSD 320-646600/3-A).

Method 1613B: The continuing calibration verification (CCV) associated with batch 320-650893 recovered above the upper control limit for isotope dilution analyte (IDA) 13C-1,2,3,4,7,8,9-HpCDF. The samples associated with this CCV are in control for this IDA and are non-detect above the reporting limit (RL) for the native analyte 1,2,3,4,7,8,9-HpCDF; therefore, the data have been reported. The associated samples are impacted: ILBMP0005_20230103 (570-122524-2) and (CCV 320-650893/18).

Method 1613B: EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV). The 13C-1,2,3,4-TCDD associated with the following samples run on instrument 11D2 exceeded this criteria: ILBMP0004_20230103 (570-122524-1), ILBMP0005_20230103 (570-122524-2) and (CCV 320-652285/2). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

No additional comments.

Revision
The report being provided is a revision of the original report sent on 1/18/2023. The report (revision 1) is being revised due to: The metals reporting was adjusted to report all elements by EPA 200.8..

Receipt
The samples were received on 1/5/2023 4:00 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 1.8º C, 1.9º C, 2.8º C and 2.9º C.

Receipt Exceptions

The reference method requires samples to be preserved to a pH of <2 SU. The following sample was received with insufficient preservation at a pH of >2 SU: EPBBC_20230105 (570-122687-1). 570-122687-U-1. The sample was preserved to the appropriate pH in the laboratory.

GC/MS VOA
Method 624.1: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-294434. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

HPLC/IC
Method 300.0: The native sample, matrix spike, and matrix spike duplicate (MS/MSD) associated with analytical batch 570-294045 were performed at the same dilution. Due to the additional level of analyte present in the spiked samples, the concentration of Sulfate in the MS/MSD was above the instrument calibration range. The data have been reported and qualified.

Method 300.0: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for Fluoride and Sulfate for analytical batch 570-294045 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method 200.8: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 570-294064 and analytical batch 570-294216 were outside control limits for Barium and Antimony. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 200.8: The method blank for preparation batch 570-294131 and analytical batch 570-294380 contained Iron and Selenium above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method 200.8: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 570-294064 and analytical batch 570-294216 were outside control limits for Zinc. Sample matrix interference is suspected because the associated laboratory control

sample (LCS) recovery was within acceptance limits.

Method 200.8: The continuing calibration verification (CCV) associated with batch 570-294197 recovered above the upper control limit for Aluminum. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: (CCV 570-294197/13) and (MB 570-294131/1-A).

Method Filtration: The following sample was not filtered within 15 minutes of sample collection as required by the method: EPBBC_20230105 (570-122687-1). The sample(s) was filtered prior to analysis at the laboratory, and the results have been reported.

Method Filtration: The following samples were not filtered within 15 minutes of sample collection as required by the method: EPBBC_20230105 (570-122687-1), (570-122687-G-1 MS) and (570-122687-G-1 MSD). The sample(s) was filtered prior to analysis at the laboratory, and the results have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
Method 625: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 570-295105. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch. Method 625.1 Sim

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Receipt
The samples were received on 1/5/2023 4:00 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 1.8º C, 1.9º C, 2.8º C and 2.9º C.

Dioxin
Method 1613B: EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV012923). The 13C-1,2,3,4-TCDD associated with the following samples run on instrument 11D2 exceeded this criteria: EPBBC_20230105 (570-122687-1), (CCV 320-650284/1) and (MB 320-645751/1-A). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Dioxin Prep
Method 1613B: Elevated reporting limits are provided for the following sample due to insufficient sample provided for preparation: EPBBC_20230105 (570-122687-1).

Nominal volume required by method is 1 L.
preparation batch 320-645751

Method: 1613B_Sox_Sep_P
Matrix: Water

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Receipt
The samples were received on 1/5/2023 4:00 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 1.8º C, 1.9º C, 2.8º C and 2.9º C.

Receipt Exceptions

The reference method requires samples to be preserved to a pH of <2 SU. The following sample was received with insufficient preservation at a pH of >2 SU: EPBBC_20230105 (570-122687-1). 570-122687-U-1. The sample was preserved to the appropriate pH in the laboratory.

RAD
Methods 900.0, 9310: Gross Alpha Beta prep batch 160-597138:

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. EPBBC_20230105 (570-122687-1), (LCS 160-597138/2-A), (LCSB 160-597138/3-A), (MB 160-597138/1-A), (570-122390-BC-2-B), (570-122390-BC-2-E DU), (570-122390-BC-2-C MS) and (570-122390-BC-2-D MSBT)

Method 900.0: Gross Alpha Beta prep batch 160-597281:

The matrix spike (MS) recoveries for gross alpha were outside control limits for one or more analytes, see QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits. (570-123038-A-2-E MS)

Method 900.0: Gross Alpha Beta prep batch 160-597281:

The detection goal was not met for the following sample due to a reduction of the sample size attributed to high residual mass: EPBBC_20230105 (570-122687-1). Analytical results are reported with the detection limit achieved.

Many isotopes requested for analysis do not have any gamma emissions, or the gamma emissions they do have are very poor. Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

Methods 904.0, 9320: Radium-228 prep batch 160-596471:

The Ra-228 laboratory control sample (LCS) associated with the following samples recovered at 128%: (LCS 160-596471/2-A). The limits in our LIMS system at (75-125%) reflect the requirements of a regulatory agency that represents a large amount of our work. However the samples associated with this LCS are not from this agency and are therefore held to our in-house statistical limits of (62-148%) per method requirements. The LCS is within criteria and no further action is required.

Method 904.0: Radium-228 prep batch 160-596471:

The following sample(s) did not meet the requested limit (RL) due to the reduced sample volume attributed to the presence of matrix interference. During preparation the analyst visually noted matrix effects. The data have been reported with this narrative.

No additional comments.

Receipt
The samples were received on 1/6/2023 6:15 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.7º C and 2.1º C.

Metals
Method 200.8: The method blank for preparation batch 570-295281 and analytical batch 570-295467 contained Copper and Lead above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method Filtration: The following samples were not filtered within 15 minutes of sample collection as required by the method: A1BMP0002_20230104 (570-122995-1), A1BMP0003_20230104 (570-122995-2), B1BMP0009_20230104 (570-122995-3), B1BMP0010_20230104 (570-122995-4), B1BMP0011_20230104 (570-122995-5), ILBMP0002_20230104 (570-122995-6) and EPNDSW04_20230104 (570-122995-7). The sample(s) was filtered prior to analysis at the laboratory, and the results have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method SM 2540D: The sample duplicate (DUP) precision for analytical batch 570-294850 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory control sample duplicate (LCS/LCSD) precision was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Receipt
The samples were received on 1/6/2023 6:15 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.7º C and 2.1º C.

Dioxin
Method 1613B: EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV). The 13C-1,2,3,4-TCDD associated with the following samples run on instrument 11D2 exceeded this criteria: A1BMP0002_20230104 (570-122995-1), A1BMP0003_20230104 (570-122995-2), B1BMP0009_20230104 (570-122995-3), B1BMP0010_20230104 (570-122995-4), B1BMP0011_20230104 (570-122995-5), ILBMP0002_20230104 (570-122995-6) and (CCV 320-651279/2). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

Receipt
The samples were received on 1/6/2023 6:15 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.7º C and 2.1º C.

Organic Prep
Method D4464: The sample duplicate precision for the following sample associated with analytical batch 570-300043 was flagged as being outside control limits due to a L.I.M.S. limitation: (570-123303-A-1) and (570-123303-A-1 DU). The mean grain size for the sample and sample duplicate were within RPD acceptance criteria. Method D4464.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Revision
The report being provided is a revision of the original report sent on 1/18/2023. The report (revision 1) is being revised due to: The metals reporting was adjusted to report all elements by EPA 200.8..

Receipt
The samples were received on 1/6/2023 6:15 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.9º C and 2.1º C.

HPLC/IC
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method 200.8: The method blank for preparation batch 570-295045 and analytical batch 570-295171 contained Manganese above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method 200.8: The method blank for preparation batch 570-295156 and analytical batch 570-295404 contained Iron above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method Filtration: The following samples were not filtered within 15 minutes of sample collection as required by the method: EPSW001IE01_20230104 (570-122999-1) and A1BPSW0001_20230104 (570-122999-2). The sample(s) was filtered prior to analysis at the laboratory, and the results have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

Dioxin

Qualifier	Qualifier Description
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL
MB	Analyte present in the method blank
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.

Receipt
The samples were received on 1/6/2023 6:15 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.9º C and 2.1º C.

Receipt Exceptions

The reference method requires samples to be preserved to a pH of <2 SU. The following samples were received with insufficient preservation at a pH of >2 SU: EPSW001IE01_20230104 (570-122999-1) and A1BPSW0001_20230104 (570-122999-2). 570-122999-J-1 and K-2. The samples were preserved to the appropriate pH in the laboratory.

Dioxin
Method 1613B: EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV). The 13C-1,2,3,4-TCDD associated with the following samples run on instrument 11D2 exceeded this criteria: EPSW001IE01_20230104 (570-122999-1), A1BPSW0001_20230104 (570-122999-2) and (CCV 320-652595/2). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Dioxin Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Receipt
The samples were received on 1/6/2023 6:15 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.9º C and 2.1º C.

Receipt Exceptions

The reference method requires samples to be preserved to a pH of <2 SU. The following samples were received with insufficient preservation at a pH of >2 SU: EPSW001IE01_20230104 (570-122999-1) and A1BPSW0001_20230104 (570-122999-2). 570-122999-J-1 and K-2. The samples were preserved to the appropriate pH in the laboratory.

RAD
Method 900.0: Gross Alpha Gross Beta batch 596518
The detection goal was not met for the following sample due to a reduction of the sample size attributed to high residual mass: EPSW001IE01_20230104 (570-122999-1). Analytical results are reported with the detection limit achieved.

Method 900.0: Gross Alpha Gross Beta batch 596518
Although the sample was prepped at full volume the detection goal was not met for the sample duplicate. However the purpose of the DUP is to demonstrate batch precision. The precision was within control limits demonstrating no adverse effect from the discrepancy.

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

Method 900.0: Gross Alpha Beta prep batch 160-597281:

The matrix spike (MS) recoveries for gross alpha were outside control limits for one or more analytes, see QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits. (570-123038-A-2-E MS)

Method 901.1: Gamma Prep Batch 160-596761
Many isotopes requested for analysis do not have any gamma emissions, or the gamma emissions they do have are very poor. Often, such analytes are reported by gamma spectrometry assuming secular equilibrium with a longer-lived parent. The client should ensure that such inference is acceptable for their sample based upon process knowledge. The following assumptions were made for this report:

Revision
The report being provided is a revision of the original report sent on 1/18/2023. The report (revision 1) is being revised due to: The metals reporting was adjusted to report all elements by EPA 200.8..

Receipt
The sample was received on 1/6/2023 6:15 PM. Unless otherwise noted below, the sample arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 1.8º C.

GC/MS VOA
Method 624.1: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-294711. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

HPLC/IC
Method 218.6: The following sample was received and analyzed outside of holding time: BGBMP0003_20230104 (570-123009-1).

Method 218.6: The following sample was received, filtered and analyzed outside of holding time: BGBMP0003_20230104 (570-123009-1).

Method 300.0: Due to the high concentration of Fluoride, the matrix spike / matrix spike duplicate (MS/MSD) for analytical batch 570-294668 could not be evaluated for accuracy and precision. The associated laboratory control sample (LCS) met acceptance criteria.

Method 300.0: Dilutions were performed for the following samples due to sample matrix properties: BGBMP0003_20230104 (570-123009-1).

Method 300.0: The following sample was received outside of holding time: BGBMP0003_20230104 (570-123009-1).

Method 300.0: Dilutions were performed for the following samples due to sample matrix properties: BGBMP0003_20230104 (570-123009-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method 200.8: The method blank for preparation batch 570-295281 and analytical batch 570-295467 contained Copper and Lead above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method 200.8: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 570-295281 and analytical batch 570-295467 were outside control limits for Manganese and Iron. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 200.8: The method blank for preparation batch 570-295281 and analytical batch 570-295467 contained Boron above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
Method 625: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 570-295105. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch. Method 625.1 Sim

Qualifier	Qualifier Description
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL
MB	Analyte present in the method blank
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.

No additional comments.

Receipt
The sample was received on 1/6/2023 6:15 PM. Unless otherwise noted below, the sample arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 1.8º C.

Dioxin
Method 1613B: EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV). The 13C-1,2,3,4-TCDD associated with the following samples run on instrument 11D2 exceeded this criteria: BGBMP0003_20230104 (570-123009-1), (CCV 320-651542/2) and (MB 320-646691/1-A). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Dioxin Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Method D4464: The sample duplicate precision for the following sample associated with analytical batch 570-300043 was flagged as being outside control limits due to a L.I.M.S. limitation: (570-123303-A-1) and (570-123303-A-1 DU). The mean grain size for the sample and sample duplicate were within RPD acceptance criteria. Method D4464.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Receipt
The sample was received on 1/6/2023 6:15 PM. Unless otherwise noted below, the sample arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 1.8º C.

Receipt Exceptions

The reference method requires samples to be preserved to a pH of <2 SU. The following sample was received with insufficient preservation at a pH of >2 SU: BGBMP0003_20230104 (570-123009-1). 570-123009-T-1. The sample was preserved to the appropriate pH in the laboratory.

Methods 904.0, 9320: Radium-228 prep batch 160-596471:

The Ra-228 laboratory control sample (LCS) associated with the following samples recovered at 128%: (LCS 160-596471/2-A). The limits in our LIMS system at (75-125%) reflect the requirements of a regulatory agency that represents a large amount of our work. However the samples associated with this LCS are not from this agency and are therefore held to our in-house statistical limits of (62-148%) per method requirements. The LCS is within criteria and no further action is required.

Method 904.0: Radium-228 prep batch 160-596471:
