Revision
The report being provided is a revision of the original report sent on 2/7/2023. The report (revision 2) is being revised due to: The EPA 314.0 (Perchlorate) results were updated to correct a reporting error with the final results..

Report revision history
Revision 1 - 3/1/2023 - Reason - The EPA 314.0 (Perchlorate) results were updated to correct a reporting error with the final results..

Receipt
The samples were received on 1/11/2023 7:10 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 1.8º C, 1.9º C and 2.1º C.

GC/MS VOA
Method 624.1: The following volatiles sample was diluted due to foaming at the time of purging during the original sample analysis: EPBLLC_011023 (570-123671-1). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method 625.1 SIM: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for preparation batch 570-296163 and analytical batch 570-298493 recovered outside control limits for the following analytes: Benzidine. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 625.1 SIM: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 570-296163 and analytical batch 570-298493 recovered outside control limits for the following analytes: Benzidine.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

HPLC/IC
Method 300.0: The following samples were received outside of holding time: EPBMC_010923 (570-123671-2) and EPBBC_010923 (570-123671-3).

Method 300.0: Dilutions were performed for the following samples due to sample matrix properties: EPBBC_010923 (570-123671-3) and EPBMC_011023 (570-123671-4).

Method 218.6: The following samples were received and analyzed outside of holding time: EPBLLC_011023 (570-123671-1), EPBMC_010923 (570-123671-2), EPBBC_010923 (570-123671-3) and EPBMC_011023 (570-123671-4).

Method 218.6: The following sample were received, filtered and analyzed outside of holding time: EPBLLC_011023 (570-123671-1), EPBMC_010923 (570-123671-2), EPBBC_010923 (570-123671-3) and EPBMC_011023 (570-123671-4).

Method 314.0: The native sample, matrix spike, and matrix spike duplicate (MS/MSD) associated with analytical batch 570-296367 were performed at the same dilution. Due to the additional level of analyte present in the spiked samples, the concentration of Perchlorate in the MS/MSD was above the instrument calibration range. The data have been reported and qualified.

Method 314.0: Due to the high concentration of Perchlorate, the matrix spike / matrix spike duplicate (MS/MSD) for analytical batch 570-296367 could not be evaluated for accuracy and precision. The associated laboratory control sample (LCS) met acceptance criteria.

Method 314.0: Reanalysis of the following sample was performed outside of the analytical holding time due to client/PM request: EPBLLC_011023 (570-123671-1).

Laboratory: Eurofins Calscience (Continued)

Method 314.0: Sample was re-analyzed out of hold for confirmation on 03/23/2023. The peak was determined to be a non-perchlorate detection at the perchlorate retention time. This original result is being reported due to client/PM request.

Qualifiers

Dioxin

Qualifier	Qualifier Description
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL
LQ	LCS/LCSD recovery above method control limits
MB	Analyte present in the method blank
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.

Revision
The report being provided is a revision of the original report sent on 2/2/2023. The report (revision 1) is being revised due to: The sample IDs were updated to match the COC for sample #2 and #3. Revised PDF and EDD files were issued..

Receipt
The samples were received on 1/11/2023 7:10 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 1.8º C, 1.9º C and 2.1º C.

Dioxin
Method 1613B: The laboratory control sample (LCS) for preparation batch 320-647614 and analytical batch 320-649121 recovered outside control limits for 1,2,3,7,8,9-HxCDD. This analyte was biased high in the LCS and not detected in the associated samples; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Dioxin Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Revision
The report being provided is a revision of the original report sent on 2/16/2023. The report (revision 1) is being revised due to: The sample IDs were updated to match the COC for sample #2 and #3. Revised PDF and EDD files were issued..

Receipt
The samples were received on 1/11/2023 7:10 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 1.8º C, 1.9º C and 2.1º C.

Receipt Exceptions

The reference method requires samples to be preserved to a pH of <2 SU. The following samples were received with insufficient preservation at a pH of >2 SU: EPBLLC_011023 (570-123671-1), EPBMC_010923 (570-123671-2), EPBBC_010923 (570-123671-3) and EPBMC_011023 (570-123671-4). 570-123671-T-1, T-2, T-3, and T-4. The samples were preserved to the appropriate pH in the laboratory.

RAD
Methods 900.0, 9310: Gross Alpha Beta prep batch 160-598184:

The detection goal was not met for the following sample(s). The samples and batch QC were prepped at full volume. Matrix interferences are suspected because the method blank achieved the detection goal demonstrating acceptable sample preparation and instrument performance: EPBMC_010923 (570-123671-2) . Analytical results are reported with the detection limit achieved.

Methods 900.0, 9310: Gross Alpha Prep batch 160-598184:

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. EPBMC_010923 (570-123671-2), (LCS 160-598184/2-A), (LCSB 160-598184/3-A), (MB 160-598184/1-A), (570-123671-T-2-M DU), (570-123671-T-2-K MS) and (570-123671-T-2-L MSBT)

Method 900.0: Gross Alpha and Gross Beta batch 598080
The detection goal was not met for the sample duplicate. However the purpose of the DUP is to demonstrate batch precision. The precision was within control limits demonstrating no adverse effect from the discrepancy.

(570-123671-U-3-R DU)

Method 900.0: Gross Alpha and Gross Beta batch 598080
The detection goal was not met for the following samples due to a reduction of the sample size attributed to high residual mass: EPBLLC_011023 (570-123671-1), EPBBC_010923 (570-123671-3) and EPBMC_011023 (570-123671-4). Analytical results are reported with the detection limit achieved.

Method 900.0: Gross Alpha and Gross Beta batch 598080
Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

Method 901.1: Gamma Prep Batch 160-597241
Many isotopes requested for analysis do not have any gamma emissions, or the gamma emissions they do have are very poor. Often, such analytes are reported by gamma spectrometry assuming secular equilibrium with a longer-lived parent. The client should ensure that such inference is acceptable for their sample based upon process knowledge. The following assumptions were made for this report:

Inferred from	Reported to Analyte
Th-234	Pa-234
Th-234	U-238
Pb-210	Po-210
Pb-210	Bi-210

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative.

Method 904.0: Radium-228 batch 597175
The LCS recovered at (126%). The limits in our LIMS system at 75-125 reflect the requirements of a regulatory agency that represents a large amount of our work. However the samples associated with this LCS are not from this agency and are therefore held to our in-house statistical limits of (62-148%) per method requirements. The LCS passes, no further action is required

No additional comments.

Receipt
The samples were received on 1/12/2023 5:55 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.9º C and 2.3º C.

Metals
Method 200.8: The method blank for preparation batch 570-296325 and analytical batch 570-296449 contained Copper and Lead above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method Filtration: The following samples were not filtered within 15 minutes of sample collection as required by the method: LXBMP0010_20230110 (570-123900-1) and LXBMP0012_20230110 (570-123900-2). The sample(s) was filtered prior to analysis at the laboratory, and the results have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method SM 2540D: The sample duplicate (DUP) precision for analytical batch 570-296115 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory control sample duplicate (LCS/LCSD) precision was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

No additional comments.

Receipt
The samples were received on 1/12/2023 5:55 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.9º C and 2.3º C.

Dioxin
Method 1613B: EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV). The 13C-1,2,3,4-TCDD associated with the following samples run on instrument 11D2 exceeded this criteria: LXBMP0010_20230110 (570-123900-1), LXBMP0012_20230110 (570-123900-2), (CCV 320-651543/2) and (MB 320-649091/1-A). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Dioxin Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Receipt
The samples were received on 1/12/2023 5:55 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 1.5º C, 1.7º C and 2.1º C.

GC/MS VOA
Method 624.1: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-295749. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

Method 624.1: The following volatiles samples were diluted due to foaming at the time of purging during the original sample analysis: BGBMP0003_20230110 (570-123901-1) and LXBMP0011_20230110 (570-123901-2). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method 625.1 SIM: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for preparation batch 570-296163 and analytical batch 570-298493 recovered outside control limits for the following analytes: Benzidine. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 625.1 SIM: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 570-296163 and analytical batch 570-298493 recovered outside control limits for the following analytes: Benzidine.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

HPLC/IC
Method 218.6: The following samples were received and analyzed outside of holding time: BGBMP0003_20230110 (570-123901-1) and LXBMP0011_20230110 (570-123901-2).

Method 218.6: The following samples were received, prepared and analyzed outside of holding time: BGBMP0003_20230110 (570-123901-1) and LXBMP0011_20230110 (570-123901-2).

Method 300.0: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 570-295613 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 300.0: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for Fluoride for analytical batch 570-295613 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 300.0: The following sample was received outside of holding time: LXBMP0011_20230110 (570-123901-2).

Method 300.0: The following sample was received outside of holding time: BGBMP0003_20230110 (570-123901-1).

Method 314.0: The native sample, matrix spike, and matrix spike duplicate (MS/MSD) associated with analytical batch 570-296367 were performed at the same dilution. Due to the additional level of analyte present in the spiked samples, the concentration of Perchlorate in the MS/MSD was above the instrument calibration range. The data have been reported and qualified.

Method 314.0: Due to the high concentration of Perchlorate, the matrix spike / matrix spike duplicate (MS/MSD) for analytical batch 570-296367 could not be evaluated for accuracy and precision. The associated laboratory control sample (LCS) met acceptance criteria.

Qualifiers

Dioxin

Qualifier	Qualifier Description
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL
MB	Analyte present in the method blank
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.

Receipt
The samples were received on 1/12/2023 5:55 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 1.5º C, 1.7º C and 2.1º C.

Dioxin
Method 1613B: EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV). The 13C-1,2,3,4-TCDD associated with the following samples run on instrument 11D2 exceeded this criteria: BGBMP0003_20230110 (570-123901-1), LXBMP0011_20230110 (570-123901-2), (CCV 320-651543/2) and (MB 320-649091/1-A). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Dioxin Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Method 901.1: Gamma Prep Batch 160-597762
Many isotopes requested for analysis do not have any gamma emissions, or the gamma emissions they do have are very poor. Often, such analytes are reported by gamma spectrometry assuming secular equilibrium with a longer-lived parent. The client should ensure that such inference is acceptable for their sample based upon process knowledge. The following assumptions were made for this report:

No additional comments.

Receipt
The samples were received on 1/12/2023 5:55 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 1.8º C, 1.9º C and 2.1º C.

HPLC/IC
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method 200.7 Rev 4.4: The matrix spike / matrix spike duplicate (MS/MSD) recoveries of Iron for preparation batch 570-296322 and analytical batch 570-296650 were outside control limits for one or more analytes, see QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 200.8: The method blank for preparation batch 570-296325 and analytical batch 570-296466 contained Copper and Lead above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method Filtration: The following samples were not filtered within 15 minutes of sample collection as required by the method: EPSW001IE01_20230110 (570-123902-1) and A1BPSW0001_20230110 (570-123902-2). The sample(s) was filtered prior to analysis at the laboratory, and the results have been reported.

Method Filtration: The following samples were not filtered within 15 minutes of sample collection as required by the method: EPSW001IE01_20230110 (570-123902-1) and A1BPSW0001_20230110 (570-123902-2). The sample(s) was filtered prior to analysis at the laboratory, and the results have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method SM 2540D: The sample duplicate (DUP) precision for analytical batch 570-295730 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory control sample duplicate (LCS/LCSD) precision was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Receipt
The samples were received on 1/12/2023 5:55 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 1.8º C, 1.9º C and 2.1º C.

Receipt Exceptions

The reference method requires samples to have a pH of 2. The following samples were received with a pH of 6: <Affected Samples>. The samples were adjusted to the appropriate pH in the laboratory.

Method 900.0: Gross Alpha Beta prep batch 160-598084:

The detection goal was not met for the following sample due to a reduction of the sample size attributed to high residual mass: EPSW001IE01_20230110 (570-123902-1). Analytical results are reported with the detection limit achieved.

Method 900.0: Gross Alpha Beta prep batch 160-598084:

Method 901.1: Gamma Prep Batch 160-597762
Many isotopes requested for analysis do not have any gamma emissions, or the gamma emissions they do have are very poor. Receipt
The samples were received on 1/17/2023 6:25 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 1.8º C, 1.9º C and 2.1º C.

GC/MS VOA
Method 624.1: The following volatiles samples were diluted due to foaming at the time of purging during the original sample analysis: EPBLLC_011523 (570-124252-1), EPBMC_011523 (570-124252-2) and EPBBC_011523 (570-124252-3). Elevated reporting limits (RLs) are provided.

Method 624.1: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-296662. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

HPLC/IC
Method 218.6: The following samples were received and analyzed outside of holding time: EPBLLC_011523 (570-124252-1) and EPBMC_011523 (570-124252-2).

Method 218.6: The following samples were received,filtered and analyzed outside of holding time: EPBLLC_011523 (570-124252-1), EPBMC_011523 (570-124252-2) and EPBBC_011523 (570-124252-3).

Method 300.0: The following samples were received outside of holding time: EPBLLC_011523 (570-124252-1), EPBMC_011523 (570-124252-2) and EPBBC_011523 (570-124252-3).

Method 314.0: The native sample, matrix spike, and matrix spike duplicate (MS/MSD) associated with analytical batch 570-297043 were performed at the same dilution. Due to the additional level of analyte present in the spiked samples, the concentration of Perchlorate in the MS/MSD was above the instrument calibration range. The data have been reported and qualified.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method 200.8: The method blank for preparation batch 570-297278 and analytical batch 570-297371 contained Iron above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method 200.8: <EXPLANATION_REQUIRED>

EPBMC_011523 (570-124252-2)

Method Filtration: The following samples were not filtered within 15 minutes of sample collection as required by the method: EPBLLC_011523 (570-124252-1), EPBMC_011523 (570-124252-2) and EPBBC_011523 (570-124252-3). The sample(s) was filtered prior to analysis at the laboratory, and the results have been reported.

Receipt
The samples were received on 1/17/2023 6:25 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 1.8º C, 1.9º C and 2.1º C.

Dioxin
Method 1613B: EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV). The 13C-1,2,3,4-TCDD associated with the following samples run on instrument 11D2 exceeded this criteria: EPBMC_011523 (570-124252-2), EPBBC_011523 (570-124252-3), (CCV 320-651969/2) and (MB 320-651189/1-A). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

Receipt
The samples were received on 1/17/2023 6:25 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 1.8º C, 1.9º C and 2.1º C.

Receipt Exceptions

The reference method requires samples to have a pH of 2. The following samples were received with a pH of 6. The samples were adjusted to the appropriate pH in the laboratory.

Method 904.0: Radium 228 batch 597622
The LCS recovered at (126%). The limits in our LIMS system at 75-125 reflect the requirements of a regulatory agency that represents a large amount of our work. However the samples associated with this LCS are not from this agency and are therefore held to our in-house statistical limits of (62-148%) per method requirements. The LCS passes, no further action is required

(LCS 160-597622/2-A)

Method 904.0: Radium 228 batch 597622
The detection goal was not met for the following sample(s). Samples are prepped at a reduced volume due to the presence of matrix interferences: EPBLLC_011523 (570-124252-1), EPBMC_011523 (570-124252-2), EPBBC_011523 (570-124252-3), (160-48612-B-1-B) and (160-48612-D-1-B DU). Analytical results are reported with the detection limit achieved.

Method 904.0: Radium 228 batch 597622
The lower control limit (40%) for the following sample: EPBLLC_011523 (570-124252-1). There was physical evidence of matrix interference apparent during the initial preparation of the sample. The QC samples associated with the batch have acceptable carrier recovery indicating the presence of matrix interference.

Comments
No additional comments.

Receipt
The samples were received on 1/17/2023 6:23 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 1.7º C, 1.9º C and 2.3º C.

Metals
Method 200.8: The method blank for preparation batch 570-296798 and analytical batch 570-297030 contained Lead above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method Filtration: The following samples were not filtered within 15 minutes of sample collection as required by the method: LXBMP0010_20230114 (570-124259-1) and LXBMP0012_20230114 (570-124259-2). The sample(s) was filtered prior to analysis at the laboratory, and the results have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Receipt
The samples were received on 1/17/2023 6:23 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 1.7º C, 1.9º C and 2.3º C.

Dioxin
Method 1613B: EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV). The 13C-1,2,3,4-TCDD associated with the following samples run on instrument 11D2 exceeded this criteria: LXBMP0010_20230114 (570-124259-1), LXBMP0012_20230114 (570-124259-2), (CCV 320-651969/2) and (MB 320-651189/1-A). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Dioxin Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Receipt
The samples were received on 1/17/2023 6:25 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.3º C and 2.4º C.

Receipt Exceptions

The following sample was received outside of holding time for NO3,NO2 & Cr VI: LXBMP0011_20230114 (570-124260-1).

A trip blank was submitted for analysis with these samples; however, it was not listed on the Chain of Custody (COC).

The clients office was contacted with the above sample receipt anomalies. The laboratory was provided written direction on how to proceed, please refer to the COC section of the report for further details.

GC/MS VOA
Method 624.1: The following volatiles sample was diluted due to foaming at the time of purging during the original sample analysis: LXBMP0011_20230114 (570-124260-1). Elevated reporting limits (RLs) are provided.

Method 624.1: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-296662. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

HPLC/IC
Method 218.6: The following sample was received and analyzed outside of holding time: LXBMP0011_20230114 (570-124260-1).

Method 218.6: The following samples were received,filtered and analyzed outside of holding time: LXBMP0011_20230114 (570-124260-1) and (570-124252-D-1-A).

Method 300.0: The following sample was received outside of holding time: LXBMP0011_20230114 (570-124260-1).

Method 314.0: The native sample, matrix spike, and matrix spike duplicate (MS/MSD) associated with analytical batch 570-297043 were performed at the same dilution. Due to the additional level of analyte present in the spiked samples, the concentration of Perchlorate in the MS/MSD was above the instrument calibration range. The data have been reported and qualified.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method 200.8: The method blank for preparation batch 570-296798 and analytical batch 570-297048 contained Lead above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method Filtration: The following sample was not filtered within 15 minutes of sample collection as required by the method: LXBMP0011_20230114 (570-124260-1). The sample(s) was filtered prior to analysis at the laboratory, and the results have been reported.

No additional comments.

Receipt
The samples were received on 1/17/2023 6:25 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.3º C and 2.4º C.

Dioxin
Method 1613B: EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV). The 13C-1,2,3,4-TCDD associated with the following samples run on instrument 11D2 exceeded this criteria: LXBMP0011_20230114 (570-124260-1), (CCV 320-651969/2) and (MB 320-651189/1-A). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Dioxin Prep
Method 1613B: Elevated reporting limits are provided for the following samples due to insufficient sample provided for preparation: LXBMP0011_20230114 (570-124260-1).

Nominal volume required by method is 1L.
preparation batch 320-651189

Method: 1613B_Sox_Sep_P
Matrix: Water

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Receipt
The samples were received on 1/17/2023 6:25 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.3º C and 2.4º C.

Receipt Exceptions

The reference method requires samples to have a pH of 2. The following samples were received with a pH of 6. The samples were adjusted to the appropriate pH in the laboratory.

Job#: 570-124260 -1
Job#: 570-124252 -1.2.3
Job#: 570-124263 -1,2
Job#: 570-124262 -1

The following sample was received outside of holding time for NO3,NO2 & Cr VI: LXBMP0011_20230114 (570-124260-1).

A trip blank was submitted for analysis with these samples; however, it was not listed on the Chain of Custody (COC).

The clients office was contacted with the above sample receipt anomalies. The laboratory was provided written direction on how to proceed, please refer to the COC section of the report for further details.

Method 901.1: Gamma Prep Batch 160-597949
Many isotopes requested for analysis do not have any gamma emissions, or the gamma emissions they do have are very poor. Often, such analytes are reported by gamma spectrometry assuming secular equilibrium with a longer-lived parent. The client should ensure that such inference is acceptable for their sample based upon process knowledge. The following assumptions were made for this report:

Method 904.0: Radium 228 batch 597622
The LCS recovered at (126%). The limits in our LIMS system at 75-125 reflect the requirements of a regulatory agency that represents a large amount of our work. However the samples associated with this LCS are not from this agency and are therefore held to our in-house statistical limits of (62-148%) per method requirements. The LCS passes, no further action is required

Method 904.0: Radium 228 batch 597622
The detection goal was not met for the following sample(s). Samples are prepped at a reduced volume due to the presence of matrix interferences: LXBMP0011_20230114 (570-124260-1), (160-48612-B-1-B) and (160-48612-D-1-B DU). Analytical results are reported with the detection limit achieved.

MB	Analyte present in the method blank
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.

Narrative

Job Narrative
570-124262-2

Receipt
The sample was received on 1/17/2023 6:25 PM. Unless otherwise noted below, the sample arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.9°C

Receipt Exceptions
The reference method requires samples to have a pH of 2. The following samples were received with a pH of 6. The samples were adjusted to the appropriate pH in the laboratory.

Job#: 570-124260 -1
Job#: 570-124252 -1.2.3
Job#: 570-124263 -1,2
Job#: 570-124262 -1

The following sample was received outside of holding time for NO3,NO2 & Cr VI: BGBMP0003_20230114 (570-124262-1).

Dioxin
Method 1613B: Elevated reporting limits are provided for the following samples due to insufficient sample provided for preparation: BGBMP0003_20230114 (570-124262-1).Nominal volume required by method is 1L.preparation batch 320-651189 Method: 1613B_Sox_Sep_PMatrix: Water

Method 1613B: EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV). The 13C-1,2,3,4-TCDD associated with the following samples run on instrument 11D2 exceeded this criteria: BGBMP0003_20230114 (570-124262-1), (CCV 320-651969/2) and (MB 320-651189/1-A). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Receipt
The sample was received on 1/17/2023 6:25 PM. Unless otherwise noted below, the sample arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 1.9º C.

Receipt Exceptions

The reference method requires samples to have a pH of 2. The following samples were received with a pH of 6. The samples were adjusted to the appropriate pH in the laboratory.

Revision
The report being provided is a revision of the original report sent on 1/23/2023. The report (revision 1) is being revised due to: The metals reporting was adjusted to report all elements by EPA 200.8..

Receipt
The samples were received on 1/17/2023 6:25 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.2º C and 2.1º C.

HPLC/IC
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method 200.8: The method blank for preparation batch 570-296798 and analytical batch 570-297030 contained Lead above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method 200.8: The method blank for preparation batch 570-297278 and analytical batch 570-297371 contained Iron above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method 200.8: The method blank for preparation batch 570-297278 and analytical batch 570-297373 contained Iron above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method 200.8: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for preparation batch 570-297319 and analytical batch 570-297473 were outside control limits for Iron and Manganese. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory sample control duplicate (LCS/LCSD) precision was within acceptance limits.

Method Filtration: The following samples were not filtered within 15 minutes of sample collection as required by the method: EPSW001IE01_20230114 (570-124263-1) and A1BPSW0001_20230114 (570-124263-2). The sample(s) was filtered prior to analysis at the laboratory, and the results have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.
