Receipt
The samples were received on 12/28/2021 6:00 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 2.7º C, 2.9º C and 3.5º C.

Receipt Exceptions

The number of containers for the following samples did not match the information listed on the Chain-of-Custody (COC): EPSW001BG01_20211223 (570-80274-1) and EPSW001PV01_20211223 (570-80274-2). Received 24 containers, while the COC lists 27.

The number of containers for the following samples did not match the information listed on the Chain-of-Custody (COC): EPSW001B003_20211223 (570-80274-3). Received 23 containers, while the COC lists 23.

Received unpreserved 1L plastic instead on 1L plastic w/NaOH for CN: EPSW001PV01_20211223 (570-80274-2).

The laboratory did not receive 1L plastic container w/NaOH for EPA Cyanide analysis that was requested on the Chain-of-Custody on the following sample: EPSW001B003_20211223 (570-80274-3).

RAD
Method 900.0: Gross alpha beta batch 544905
The detection goal was not met for the following samples due to a reduction of the sample size attributed to high residual mass: EPSW001BG01_20211223 (570-80274-1) and EPSW001PV01_20211223 (570-80274-2). Analytical results are reported with the detection limit achieved.

Method 900.0: Gross alpha beta batch 544905
Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

Method 900.0: Gross alpha beta batch 546013
The detection goal was not met for the following samples due to a reduction of the sample size attributed to high residual mass: EPSW001BG01_20211223 (570-80274-1), EPSW001PV01_20211223 (570-80274-2), (570-80422-S-1-D) and (570-80422-S-1-I DU). The GFPC long monthly backgrounds (ICB) were counted for 800 minutes, but due to current software limitations with the Protean instruments the long monthly backgrounds are calculated at 1000 minutes. This discrepancy has been manually updated, and data is correct, but the raw data printouts still show the incorrect time of 1000 minutes. The ICB raw data includes the correct count time of 800 minutes and counts.

Methods 904.0, 9320: Radium 228 batch 544914
The detection goal was not met for the following sample(s). Sample was prepped at a reduced volume due to the presence of matrix interferences: EPSW001BG01_20211223 (570-80274-1). Analytical results are reported with the detection limit achieved.

Methods 904.0, 9320: Radium 228 batch 544914
Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

The GFPC long monthly backgrounds (ICB) were counted for 800 minutes, but due to current software limitations with the Protean instruments the long monthly backgrounds are calculated at 1000 minutes. This discrepancy has been manually updated, and data is correct, but the raw data printouts still show the incorrect time of 1000 minutes. The ICB raw data includes the correct count time of 800 minutes and counts.

Method 624.1: Internal standard (ISTD) response for TBA-d9 for the following samples in analytical batch 570-205379 was outside acceptance criteria: EPBLLC_20211230 (570-80422-1) and (CCVIS 570-205379/6). This ISTD does not correspond to any of the requested target compounds reported from this analytical batch; therefore, the data have been reported.

Method 624.1: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-205379.The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

Method 624.1: The following volatiles sample was diluted due to foaming at the time of purging during the original sample analysis: EPBLLC_20211230 (570-80422-1). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Receipt
The samples were received on 12/30/2021 3:50 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 3.2º C and 3.5º C.

Dioxin
Method 1613B: EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV). The 13C-1,2,3,4-TCDD associated with the following samples run on instrument 11D2 exceeded this criteria: (CCV 320-559680/2) and (MB 320-556933/1-A). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Dioxin Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Lab Admin
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Subcontract Work
Method EPA 1631E LL Mercury: This method was subcontracted to Eurofins Frontier Global Sciences LLC. The subcontract laboratory certification is different from that of the facility issuing the final report.

SAMPLE RECEIPT

Samples were received at Eurofins Frontier Global Sciences (EFGS) on 04-Jan-22 10:45. The samples were received intact, on-ice within a sealed cooler at

Cooler	Temp C°
Default Cooler	0.5
New Cooler	0.4

SAMPLE PREPARATION AND ANALYSIS

Samples were prepared and analyzed for total mercury by flow injection atomic fluorescence spectrometry (FI-AFS) in accordance with EPA 1631E.

ANALYTICAL AND QUALITY CONTROL ISSUES

Method blanks were prepared for every preparation to assess possible blank contribution from the sample preparation procedure. The method blanks were carried through the entire analytical procedure. All blanks fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

Liquid spikes, certified reference material (CRM) or a quality control samples (QCS) were prepared for every preparation as a measure of accuracy. All liquid spikes, CRMs and/or QCS samples fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

As an additional measure of the accuracy of the methods used and to check for matrix interference, matrix spikes (MS) and matrix spike duplicates (MSD) were digested and analyzed. All of the matrix spike recoveries fell within the established acceptance criteria with the exception of any items flagged and described in the notes and definitions section of the report.

A reasonable measure of the precision of the analytical methods is the relative percent difference (RPD) between a matrix spike recovery and a matrix spike duplicate recovery and between laboratory control sample recovery and laboratory control sample duplicate recoveries. All of the relative percent differences fell within established acceptance criteria with the exception of any items flagged and described in the notes and definitions section of the report.

Receipt
The samples were received on 12/30/2021 3:50 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 3.2º C and 3.5º C.

RAD
Method 900.0: Gross alpha beta batch 546013
The matrix spike (MS) recoveries for gross alpha were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits. (570-80422-S-1-G MS)

Method 900.0: Gross alpha beta batch 546013
The detection goal was not met for the following samples due to a reduction of the sample size attributed to high residual mass: EPBLLC_20211230 (570-80422-1) and (570-80422-S-1-I DU). Analytical results are reported with the detection limit achieved.

Method 900.0: Gross alpha beta batch 546013
Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

EPBLLC_20211230 (570-80422-1), (LCS 160-546013/2-A), (LCSB 160-546013/3-A), (MB 160-546013/1-A), (570-80422-S-1-I DU), (570-80422-S-1-G MS) and (570-80422-S-1-H MSBT)

Method 900.0: Gross alpha beta batch 547126
The detection goal was not met for the following sample due to a reduction of the sample size attributed to high residual mass: EPBLLC_20211230 (570-80422-1). Analytical results are reported with the detection limit achieved.

Method 900.0: Gross Alpha Beta prep batch 160-547126:

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. EPBLLC_20211230 (570-80422-1), (LCS 160-547126/2-A), (LCSB 160-547126/3-A), (MB 160-547126/1-A), (570-80548-R-1-O), (570-80548-R-1-U DU), (570-80548-R-1-S MS) and (570-80548-R-1-T MSBT)

The GFPC long monthly backgrounds (ICB) were counted for 800 minutes, but due to current software limitations with the Protean instruments the long monthly backgrounds are calculated at 1000 minutes. This discrepancy has been manually updated, and data is correct, but the raw data printouts still show the incorrect time of 1000 minutes. The ICB raw data includes the correct count time of 800 minutes and counts.

Method 903.0: Radium 226 Batch 160-545836:

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

EPBLLC_20211230 (570-80422-1), (LCS 160-545836/1-A), (LCSD 160-545836/2-A) and (MB 160-545836/24-A)

Method 903.0: Radium 226 Batch 160-545836:

The detection goal was not met for the following sample(s). Sample was prepped at a reduced volume due to the presence of matrix interferences: EPBLLC_20211230 (570-80422-1). Analytical results are reported with the detection limit achieved.

Job ID: 570-80422-3 (Continued)

Laboratory: Eurofins Calscience (Continued)

Method 904.0: Radium 228 batch 545838
The detection goal was not met for the following sample(s). Sample was prepped at a reduced volume due to the presence of matrix interferences: EPBLLC_20211230 (570-80422-1). Analytical results are reported with the detection limit achieved.

Method 904.0: Radium 228 batch 545838
Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

EPBLLC_20211230 (570-80422-1), (LCS 160-545838/1-A), (LCSD 160-545838/2-A) and (MB 160-545838/24-A)

Method 905: Strontium 90 batch 546021
Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

The GFPC long monthly backgrounds (ICB) were counted for 800 minutes, but due to current software limitations with the Protean instruments the long monthly backgrounds are calculated at 1000 minutes. This discrepancy has been manually updated, and data is correct, but the raw data printouts still show the incorrect time of 1000 minutes. The ICB raw data includes the correct count time of 800 minutes and counts.

EPBLLC_20211230 (570-80422-1), (LCS 160-546021/1-A), (LCSD 160-546021/2-A) and (MB 160-546021/18-A)

Method 906.0: Tritium in liquid batch 160-544885
Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative.

Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.
EPBLLC_20211230 (570-80422-1), (LCS 160-544885/2-A), (MB 160-544885/1-A), (570-80272-X-1-A), (570-80272-X-1-B DU), (570-80274-V-3-A) and (570-80274-V-3-B MS)

Method Evaporation: Gross Alpha/Beta preparation batch 160-545628 and 160-546013

The following samples had a final mass above the 100 mg limit: EPBLLC_20211230 (570-80422-1), (570-80422-S-1-A DU), (570-80422-S-1-A MS) and (570-80422-S-1-A MSBT). A dilution was performed and is reflected in the initial amount used.

Method Evaporation: Gross Alpha/Beta preparation batch 160-546014

The following samples had a final mall above the 100 mg limit: EPBLLC_20211230 (570-80422-1). A dilution was performed and is reflected in the initial amount used.

Method Evaporation: Gross Alpha/Beta preparation batch 160-547126

The following samples had a final mass above the 100 mg limit: EPBLLC_20211230 (570-80422-1). A dilution was performed and is reflected in the initial amount used.

Method LSC_Dist_Susp: Tritium Prep Batch 544885:

The following samples had unclear matrices: EPBLLC_20211230 (570-80422-1). The samples were orange-tan in color and cloudy.

Method PrecSep_0: Radium-228 Prep Batch 160-545838

The following samples were prepared at a reduced aliquot due to Matrix: EPBLLC_20211230 (570-80422-1). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead of a sample duplicate (DUP) to demonstrate batch precision.

No additional comments.

Receipt
The sample was received on 1/3/2022 4:48 PM. Unless otherwise noted below, the sample arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 4.4º C.

GC/MS VOA
Method 624.1: Internal standard (ISTD) response for TBA-d9 for the following samples in analytical batch 570-205379 was outside acceptance criteria: EPBBC_20211231 (570-80531-1) and (CCVIS 570-205379/6). This ISTD does not correspond to any of the requested target compounds reported from this analytical batch; therefore, the data have been reported.

Method 624.1: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-205379.The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

HPLC/IC
Method 218.6: The following sample was received outside of holding time: EPBBC_20211231 (570-80531-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method 200.8: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for preparation batch 440-664037 and 440-664109 and analytical batch 440-664141 were outside control limits for Chromium and Iron. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) was within acceptance limits.

Method FILTRATION: The following samples requested dissolved metals and were not filtered in the field: EPBBC_20211231 (570-80531-1). These samples were filtered and preserved past the 24 hrs from receipt in the laboratory due to samples received with insufficient time to filter within the HT.

01/07/21 @ 19:54 hours
2.5 mL HNO3
HNO3 Lot # 0000280251

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
Method 625: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 570-205520. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch. 625.1 Sim

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifier	Qualifier Description
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL
MB	Analyte present in the method blank
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.

Receipt
The sample was received on 1/3/2022 4:48 PM. Unless otherwise noted below, the sample arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 4.4º C.

Dioxin
Method 1613B: EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV). The 13C-1,2,3,4-TCDD associated with the following samples run on instrument 11D2 exceeded this criteria: (CCV 320-559680/2) and (MB 320-556933/1-A). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Dioxin Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Lab Admin
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Subcontract Work
Method EPA 1631E LL Mercury: This method was subcontracted to Eurofins Frontier Global Sciences LLC. The subcontract laboratory certification is different from that of the facility issuing the final report.

SAMPLE RECEIPT

Samples were received at Eurofins Frontier Global Sciences (EFGS) on 05-Jan-22 11:24. The samples were received intact, on-ice within a sealed cooler at

Cooler	Temp C°
Default Cooler	-0.8

SAMPLE PREPARATION AND ANALYSIS

Samples were prepared and analyzed for total mercury by flow injection atomic fluorescence spectrometry (FI-AFS) in accordance with EPA 1631E.

ANALYTICAL AND QUALITY CONTROL ISSUES

Method blanks were prepared for every preparation to assess possible blank contribution from the sample preparation procedure. The method blanks were carried through the entire analytical procedure. All blanks fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

Liquid spikes, certified reference material (CRM) or a quality control samples (QCS) were prepared for every preparation as a measure of accuracy. All liquid spikes, CRMs and/or QCS samples fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

As an additional measure of the accuracy of the methods used and to check for matrix interference, matrix spikes (MS) and matrix spike duplicates (MSD) were digested and analyzed. All of the matrix spike recoveries fell within the established acceptance criteria with the exception of any items flagged and described in the notes and definitions section of the report.

A reasonable measure of the precision of the analytical methods is the relative percent difference (RPD) between a matrix spike recovery and a matrix spike duplicate recovery and between laboratory control sample recovery and laboratory control sample duplicate recoveries. All of the relative percent differences fell within established acceptance criteria with the exception of any items flagged and described in the notes and definitions section of the report.

RAD
Method 900.0: Gross alpha beta batch 546013
The matrix spike (MS) recoveries for gross alpha were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits. (570-80422-S-1-G MS)

Method 900.0: Gross alpha beta batch 546013
The detection goal was not met for the following samples due to a reduction of the sample size attributed to high residual mass: EPBBC_20211231 (570-80531-1), (570-80422-S-1-D) and (570-80422-S-1-I DU). Analytical results are reported with the detection limit achieved.

Method 900.0: Gross alpha beta batch 546013
Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

EPBBC_20211231 (570-80531-1), (LCS 160-546013/2-A), (LCSB 160-546013/3-A), (MB 160-546013/1-A), (570-80422-S-1-D), (570-80422-S-1-I DU), (570-80422-S-1-G MS) and (570-80422-S-1-H MSBT)

Method 900.0: Gross alpha beta batch 547126
The detection goal was not met for the following sample due to a reduction of the sample size attributed to high residual mass: EPBBC_20211231 (570-80531-1). Analytical results are reported with the detection limit achieved.

Method 900.0: Gross Alpha Beta prep batch 160-547126:

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. EPBBC_20211231 (570-80531-1), (LCS 160-547126/2-A), (LCSB 160-547126/3-A), (MB 160-547126/1-A), (570-80548-R-1-O), (570-80548-R-1-U DU), (570-80548-R-1-S MS) and (570-80548-R-1-T MSBT)

The GFPC long monthly backgrounds (ICB) were counted for 800 minutes, but due to current software limitations with the Protean instruments the long monthly backgrounds are calculated at 1000 minutes. This discrepancy has been manually updated, and data is correct, but the raw data printouts still show the incorrect time of 1000 minutes. The ICB raw data includes the correct count time of 800 minutes and counts.

Method 903.0: Radium 226 Batch 160-545836:

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

EPBBC_20211231 (570-80531-1), (LCS 160-545836/1-A), (LCSD 160-545836/2-A) and (MB 160-545836/24-A)

Method 904.0: Radium 228 batch 545838
Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time

Method 905: Strontium 90 batch 546021
Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

The GFPC long monthly backgrounds (ICB) were counted for 800 minutes, but due to current software limitations with the Protean instruments the long monthly backgrounds are calculated at 1000 minutes. Method 906.0: Tritium in Liquid batch 160-545059
Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative.

Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

Method LSC_Dist_Susp: Tritium Prep Batch 545059:

The following sample had an unclear matrix: EPBBC_20211231 (570-80531-1). The sample was yellow in color with traces of cloudiness and some particles in it.

Method PrecSep_0: Radium-228 Prep Batch 160-545838

The following samples were prepared at a reduced aliquot due to Matrix: EPBBC_20211231 (570-80531-1). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead of a sample duplicate (DUP) to demonstrate batch precision.

Method PrecSep-21: Radium-226 Prep Batch 160-545836

The following samples were prepared at a reduced aliquot due to Matrix: EPBBC_20211231 (570-80531-1). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead of a sample duplicate (DUP) to demonstrate batch precision.

Method PrecSep-7: Strontium-90 Prep Batch 160-546021

The following samples were prepared at a reduced aliquot due to Matrix: EPBBC_20211231 (570-80531-1). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead of a sample duplicate (DUP) to demonstrate batch precision.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Receipt
The samples were received on 3/28/2022 5:50 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 2.5º C and 2.8º C.

Receipt Exceptions

The number of containers for the following samples did not match the information listed on the Chain-of-Custody (COC): EPSW001BG01_20220328 (570-89945-1). Received 20 containers, while the COC lists 27.

GC/MS VOA
Method 624.1: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-225803. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method 625.1 SIM: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for preparation batch 570-223177 and analytical batch 570-224431 recovered outside control limits for the following analytes: Bis(2-ethylhexyl) phthalate. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 625.1 SIM: The continuing calibration verification (CCV) associated with batch 570-224431 recovered above the upper control limit for Bis(2-ethylhexyl) phthalate. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: EPSW001BG01_20220328 (570-89945-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

HPLC/IC
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method 200.8: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 440-670461 and analytical batch 440-670531 were outside control limits for Antimony. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 200.8: The following sample was diluted due to the nature of the sample matrix: EPSW001BG01_20220328 (570-89945-1). Elevated reporting limits (RLs) are provided.

Method FILTRATION: The following samples requested dissolved metals and were not filtered in the field: EPSW001BG01_20220328 (570-89945-1). These samples were filtered and preserved upon receipt to the laboratory.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

preparation batch 570-223177. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch. Method 625.1 Sim

Receipt
The samples were received on 3/28/2022 5:50 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 2.5º C and 2.8º C.

Receipt Exceptions

The number of containers for the following samples did not match the information listed on the Chain-of-Custody (COC): EPSW001BG01_20220328 (570-89945-1). Received 20 containers, while the COC lists 27.

Method 1613B: EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV). The 13C-1,2,3,4-TCDD and 13C-1,2,3,7,8,9-HxCDD associated with the following samples run on instrument 12D5 exceeded this criteria: EPSW001BG01_20220328 (570-89945-1), (CCV 320-578339/2), (LCS 320-577112/2-A), (LCSD 320-577112/3-A) and (MB 320-577112/1-A). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

Receipt
The samples were received on 3/28/2022 5:50 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 2.5º C and 2.8º C.

Receipt Exceptions

The number of containers for the following samples did not match the information listed on the Chain-of-Custody (COC): EPSW001BG01_20220328 (570-89945-1). Received 20 containers, while the COC lists 27.

RAD
Method 900.0: Gross Alpha Beta Batch 160-561057:

The gross alpha laboratory control sample (LCS) associated with the following samples recovered at 128%: EPSW001BG01_20220328 (570-89945-1), (LCS 160-561057/2-A), (160-45136-A-1-C), (160-45136-A-1-F DU), (160-45136-A-1-D MS) and (160-45136-A-1-E MSBT). The limits in our LIMS system at 75-125% reflect the requirements of a regulatory agency that represents a large amount of our work. However, the samples associated with this LCS are not from this agency and are, therefore, held to our in-house statistical limits of 68-130% per method requirements. The LCS is within criteria and no further action is required.

Method 900.0: Gross Alpha Beta batch 160-561057

The detection goal was not met for the following sample due to a reduction of the sample size attributed to high residual mass: EPSW001BG01_20220328 (570-89945-1). Analytical results are reported with the detection limit achieved.

Method 900.0: Gross Alpha Beta Batch 160-561057:

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

EPSW001BG01_20220328 (570-89945-1), (LCS 160-561057/2-A), (LCSB 160-561057/3-A), (MB 160-561057/1-A), (160-45136-A-1-C), (160-45136-A-1-F DU), (160-45136-A-1-D MS) and (160-45136-A-1-E MSBT)

Method 900.0: Gross Alpha and Gross Beta batch 561268
The gross alpha laboratory control sample recovery is outside the upper QC limit indicating a potential positive bias for that analyte. This analyte was not observed above the MDC/RL in the associated samples; therefore the sample data is not adversely affected by this excursion. The data have been reported with this narrative.

(LCS 160-561268/2-A)

Method 900.0: Gross Alpha and Gross Beta batch 561268
Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

Method 901.1: Gamma Prep Batch 160-558289

Job ID: 570-89945-3 (Continued)

Laboratory: Eurofins Calscience (Continued)

Many isotopes requested for analysis do not have any gamma emissions, or the gamma emissions they do have are very poor. Often, such analytes are reported by gamma spectrometry assuming secular equilibrium with a longer-lived parent. The client should ensure that such inference is acceptable for their sample based upon process knowledge. The following assumptions were made for this report:

Receipt
The sample was received on 3/28/2022 5:50 PM. Unless otherwise noted below, the sample arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.4º C.

Receipt Exceptions

The laboratory received 250 ml plastic with HNO3 instead of 250 ml plastic unpreserved container for Dissolved Metals analysis on the following sample: EPSW002IE01_20220328 (570-89949-1).

The laboratory split off some volume from one of the 1 Liter amber bottles received for Dioxins/Furans for Dissolved Metals analyses post receipt at the lab.

HPLC/IC
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method Filtration: The following samples requested dissolved metals and were not filtered in the field: EPSW002IE01_20220328 (570-89949-1). These samples were filtered and preserved upon receipt to the laboratory.

Method 245.1: The following sample(s) was received with less than 2 days remaining on the holding time or less than one shift (8 hours) remaining on a test with a holding time of 48 hours or less. As such, the laboratory had insufficient time remaining to perform the analysis within holding time: EPSW002IE01_20220328 (570-89949-1).

Method FILTRATION: The following samples requested dissolved metals and were not filtered in the field: EPSW002IE01_20220328 (570-89949-1). These samples were filtered and preserved upon receipt to the laboratory.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Receipt
The sample was received on 3/28/2022 5:50 PM. Unless otherwise noted below, the sample arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.4º C.

Receipt Exceptions

The laboratory received 250 ml plastic with HNO3 instead of 250 ml plastic unpreserved container for Dissolved Metals analysis on the following sample: EPSW002IE01_20220328 (570-89949-1).

The laboratory split off some volume from one of the 1 Liter amber bottles received for Dioxins/Furans for Dissolved Metals analyses post receipt at the lab.

Dioxin
Method 1613B: EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV). The 13C-1,2,3,4-TCDD and 13C-1,2,3,7,8,9-HxCDD associated with the following samples run on instrument 12D5 exceeded this criteria: EPSW002IE01_20220328 (570-89949-1), (CCV 320-578339/2), (LCS 320-577112/2-A), (LCSD 320-577112/3-A) and (MB 320-577112/1-A). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

RAD
Method 900.0: Gross Alpha Beta Batch 160-561057:

The gross alpha laboratory control sample (LCS) associated with the following samples recovered at 128%: EPSW002IE01_20220328 (570-89949-1), (LCS 160-561057/2-A), (160-45136-A-1-C), (160-45136-A-1-F DU), (160-45136-A-1-D MS) and (160-45136-A-1-E MSBT). The limits in our LIMS system at 75-125% reflect the requirements of a regulatory agency that represents a large amount of our work. However, the samples associated with this LCS are not from this agency and are, therefore, held to our in-house statistical limits of 68-130% per method requirements. The LCS is within criteria and no further action is required.

Method 900.0: Gross Alpha Beta Batch 160-561057:

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

EPSW002IE01_20220328 (570-89949-1), (LCS 160-561057/2-A), (LCSB 160-561057/3-A), (MB 160-561057/1-A), (160-45136-A-1-C), (160-45136-A-1-F DU), (160-45136-A-1-D MS) and (160-45136-A-1-E MSBT)

Method 900.0: Gross Alpha and Gross Beta batch 561268
The gross alpha laboratory control sample recovery is outside the upper QC limit indicating a potential positive bias for that analyte. This analyte was not observed above the MDC/RL in the associated samples; therefore the sample data is not adversely affected by this excursion. The data have been reported with this narrative.

(LCS 160-561268/2-A)

Method 900.0: Gross Alpha and Gross Beta batch 561268
Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

Method 901.1: Gamma Prep Batch 160-558289

Many isotopes requested for analysis do not have any gamma emissions, or the gamma emissions they do have are very poor. Often, such analytes are reported by gamma spectrometry assuming secular equilibrium with a longer-lived parent. The client should ensure that such inference is acceptable for their sample based upon process knowledge. The following assumptions were made for this report:

Receipt
The samples were received on 3/28/2022 5:50 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 2.1º C and 2.4º C.

Receipt Exceptions

The laboratory received 250 ml plastic with HNO3 instead of 250 ml plastic unpreserve container for Dissolve metals analysis on the following sample: ILBMP0004_20220328 (570-89952-1), ILBMP0005_20220328 (570-89952-2) and ILBMP0008_20220328 (570-89952-3). The client was contacted, and the lab was instructed to <EXPLANATION_REQUIRED>.

Metals
Method Filtration: The following samples requested dissolved metals and were not filtered in the field: ILBMP0004_20220328 (570-89952-1), ILBMP0005_20220328 (570-89952-2), ILBMP0008_20220328 (570-89952-3) and LXBMP0010_20220328 (570-89952-4). These samples were filtered and preserved upon receipt to the laboratory.

Method 245.1: The following sample(s) was received with less than 2 days remaining on the holding time or less than one shift (8 hours) remaining on a test with a holding time of 48 hours or less. As such, the laboratory had insufficient time remaining to perform the analysis within holding time: ILBMP0004_20220328 (570-89952-1), ILBMP0005_20220328 (570-89952-2), ILBMP0008_20220328 (570-89952-3) and LXBMP0010_20220328 (570-89952-4).

Method FILTRATION: The following samples requested dissolved metals and were not filtered in the field: ILBMP0004_20220328 (570-89952-1), ILBMP0005_20220328 (570-89952-2), ILBMP0008_20220328 (570-89952-3) and LXBMP0010_20220328 (570-89952-4). Receipt
The samples were received on 3/28/2022 5:50 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 2.1º C and 2.4º C.

Receipt Exceptions

The laboratory received 250 ml plastic with HNO3 instead of 250 ml plastic unpreserve container for Dissolve metals analysis on the following sample: ILBMP0004_20220328 (570-89952-1), ILBMP0005_20220328 (570-89952-2) and ILBMP0008_20220328 (570-89952-3). The client was contacted, and the lab was instructed to <EXPLANATION_REQUIRED>.

Method 1613B: EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV). The 13C-1,2,3,4-TCDD and 13C-1,2,3,7,8,9-HxCDD associated with the following samples run on instrument 12D5 exceeded this criteria: ILBMP0004_20220328 (570-89952-1), ILBMP0005_20220328 (570-89952-2), ILBMP0008_20220328 (570-89952-3), LXBMP0010_20220328 (570-89952-4), (CCV 320-578339/2), (LCS 320-577112/2-A), (LCSD 320-577112/3-A) and (MB 320-577112/1-A). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

Method 1613B: EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV041822). The 13C-1,2,3,4-TCDD associated with the following samples run on instrument 11D2 exceeded this criteria: ILBMP0004_20220328 (570-89952-1), ILBMP0005_20220328 (570-89952-2), ILBMP0008_20220328 (570-89952-3), LXBMP0010_20220328 (570-89952-4), (CCV 320-580944/2), (MB 320-577112/1-A) and (WDM 320-580944/1). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

CASE NARRATIVE

Client: Jacobs Engineering Group, Inc.

Project: NASA SSFL CJ042 Stormwater

Report Number: 570-78855-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) resulting from a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are an unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes within the calibration range of the instrument or that reduces the interferences thereby enabling the quantification of target analytes.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT
The samples were received on 12/14/2021 at 8:05 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 3.8ºC and 4.0ºC.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2 degrees Celsius of the required temperature or method specified range. For samples with a specified temperature of 4 degrees Celsius, samples with a temperature ranging from just above freezing temperature of water to 6 degrees Celsius shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

Dioxins and Furans (HRGC/HRMS)
Samples A2BMP0006S012 (570-78855-1), A2BMP0007S020 (570-78855-2), A2BMP0012S009 (570-78855-3), EVBMP0001S018 (570-78855-4) and EVBMP0003S031 (570-78855-5) were analyzed for Dioxins and Furans in accordance with EPA SW-846 Method 8290. The samples were prepared on 12/21/2021 and analyzed on 12/28/2021.

Several analytes were detected in method blank MB 320-552716/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DISSOLVED METALS (ICPMS)

Product Number:	**100033-1-50**
Lot Number:	**2107432-50**
Matrix:	2% HNO3
Density:	1.014 g/mL ± 0.002 g/mL @ 22.0°C ± 0.3°C

Certified Value:

Element	µg/mL	SRM ID
Hg	1000 ± 6	3133

The Certified value is based on gravimetric and volumetric preparation, and verified against NIST SRM 3100 series when available via inductively coupled plasma optical emission spectrometry (ICP-OES) and/or inductively coupled plasma mass spectrometry (ICP-MS) using an internal laboratory-developed method. The uncertainty in the certified value is calculated for a 95% confidence interval and coverage factor k is about 2.
* Refer to Traceability Information, Section 4

Uncertified Values:

Trace Metal Impurity Scan: The data reported are based upon a scan of this specific lot via ICP-OES/ICP-MS analysis. The values are reported in µg/L.

The USEPA & HF scientific recommend that cuvettes used for instrument calibration or sample measurement be indexed. Indexing the cuvette will achieve the greatest accuracy, and account for normal scratches and aberrations in cuvette glass when calibrating.
Standards and standard kits purchased from HF scientific are supplied with indexing rings.

The following steps allow repeatable indexing of calibration standards.

THIS PROCEDURE REPLACES PREVIOUS INDEXING INSTRUCTIONS:

1. With the instrument in AUTO or normal reading mode insert the standard.
2. Slowly rotate the standard, inside the optical well, one complete revolution (360°). While rotating the standard slowly, observe the measured turbidity and locate the position of the cuvette having the lowest reading.
3. With the calibration standard positioned at the location having the lowest turbidity reading, install the Indexing Ring over the cap on the standard so that the pointer of the **INDEXING RING FACES DIRECTLY FORWARD, TOWARD THE OPERATOR.**
4. Repeat this procedure for all standards in the kit.

When using the standards in the future, **ALWAYS INSERT THE STANDARD SO THAT THE POINTER OF THE INDEXING RING FACES FORWARD.** Slowly rotate the standard back and forth about 5° to find the lowest point. The standard is now indexed and ready for use. Follow the calibration instructions in the owner's manual that accompanied the instrument.

Note: *ProCal* Standard values above 1000 NTU/FNU should be gently agitated prior to use in order to remix any settled particles. The latest version of owner's manuals may be downloaded from HF scientific's website: www.hfscientific.com.

Turbidity Calibration Standards

CERTIFICATE OF COMPLIANCE

Calibration Set# **39957** **Kit Lot# 210292**

TEST PERFORMED: An HF laboratory turbidimeter was used to measure the standards listed below. This instrument was calibrated on standards that are traceable to the Stock Primary Standard Formazin Suspension as specified in the 22nd Edition of Standard Methods, Section 2130 B, part 3b and EN-ISO 7027:1999(E) Section 6.2

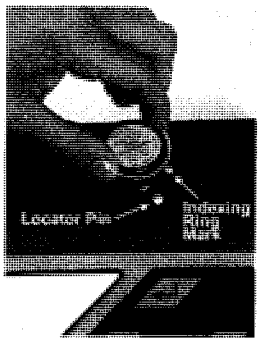
HF scientific *ProCal* turbidity standards are produced with HF Scientific's styrene divinylbenzene co-polymer microspheres approved as Primary Calibration Standards in compliance with USEPA Method 180.1.** Also Certified as Alternative Use Secondary Standards Equivalent to Freshly Prepared Formazin Suspensions Ref EN-ISO 7027: 1999(E)Section 6.2.4 Water Quality - Determination of Turbidity.



**Standard Methods for the Examination of Water and Wastewater, 22nd Edition 2012 Section 2130 Turbidity
**EPA Guidance Manual for Compliance with the Interim Enhanced Surface Treatment Rule: Turbidity Provisions. EPA 815-R-99-010 April 1999 Section 3.4.5 Calibration Standards

The USEPA & HF scientific recommend that cuvettes used for instrument calibration or sample measurement be indexed. Indexing the cuvette will achieve the greatest accuracy, and account for normal scratches and aberrations in cuvette glass when calibrating.
Standards and standard kits purchased from HF scientific are supplied with indexing rings.

The following steps allow repeatable indexing of calibration standards.

THIS PROCEDURE REPLACES PREVIOUS INDEXING INSTRUCTIONS:

1. With the instrument in AUTO or normal reading mode insert the standard.
2. Slowly rotate the standard, inside the optical well, one complete revolution (360°). While rotating the standard slowly, observe the measured turbidity and locate the position of the cuvette having the lowest reading.
3. With the calibration standard positioned at the location having the lowest turbidity reading, install the Indexing Ring over the cap on the standard so that the pointer of the **INDEXING RING FACES DIRECTLY FORWARD, TOWARD THE OPERATOR.**
4. Repeat this procedure for all standards in the kit.

When using the standards in the future, **ALWAYS INSERT THE STANDARD SO THAT THE POINTER OF THE INDEXING RING FACES FORWARD.** Slowly rotate the standard back and forth about 5° to find the lowest point. The standard is now indexed and ready for use. Follow the calibration instructions in the owner's manual that accompanied the instrument.

Note: *ProCal* Standard values above 1000 NTU/FNU should be gently agitated prior to use in order to remix any settled particles. The latest version of owner's manuals may be downloaded from HF scientific's website: www.hfscientific.com.

CERTIFICATE OF ANALYSIS

Single-Element Aqueous CRM

Product #: 4400-10PPM331-SS

Mercury (Hg) – 10 µg/mL

Lot #: 10120615-2

Matrix: 2% HNO_3

Element	Certified Concentration & Uncertainty
Hg	**10.01 ± 0.05 µg/mL**

Intended Use: This solution is intended for use as a second source certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured, processed, and/or certified under a quality management system that is registered/accredited to **ISO 17034**, **ISO/IEC 17025** and **ISO 9001**. This CRM was prepared to a nominal concentration of 10 µg/mL by gravimetric methods using a single-element concentrate diluted with filtered (0.22 µm), 18 M-ohm deionized water and stabilized with the appropriate high-purity acid as indicated in the listed matrix. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentration and uncertainty were determined using the "High Performance ICP-OES" protocol developed by NIST, and both the certified concentration and uncertainty values are traceable to **NIST SRM 3133**. The uncertainty associated with the certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Instructions for Use: We recommend that the solution be thoroughly mixed by repeated shaking or swirling of the bottle immediately prior to use. To achieve the highest accuracy, the analyst should: (1) use only pre-cleaned containers and transferware, (2) not pipette directly from the CRM's original container, (3) never pour used product back into the original container, (4) make dilutions using calibrated balances or certified class A volumetric flasks and pipettes, (5) use a minimum sub-sample size of 500 µL, and (6) dilute with the same matrix as the original CRM or other chemically suitable matrix. The solution should be kept tightly capped and stored under normal laboratory conditions. Do not freeze, heat, or immerse the bottle or its contents, and avoid exposure to direct sunlight or moisture.

Period of Validity: CPI International ensures the accuracy of this solution for **18 months** from the certification date shown below, provided the instructions for use are followed. During the period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution.

- Expiration Date has been established through real time stability studies
- Ampoules are overfilled to ensure a minimum 1.2 mL volume. We advise laboratories to quantitatively transfer desired volumes of this standard using established good laboratory practices to dilute to the desired concentration

Component	Solution Purity	Certified Concentration
Octachlorodibenzo-p-dioxin-$^{13}C_{12}$	> 99.9%	10.00 ± 0.05 µg/mL

- Uncertainty of the concentration is expressed as an expanded uncertainty in accordance with ISO 17025 and Guide 34 at the approximate 95% confidence interval using a coverage factor of k = 2 and has been calculated by statistical analysis of our production system and incorporates uncertainty of the purity factor, material density, and balance and weighing technique.
- This standard is prepared gravimetrically and mass results are reported on the conventional basis for weighing in air. Concentration is calculated based on: the actual measured mass, Purity Factor of the analyte(s), measured mass of the solution, and the density of the pure diluent at 20 °C.
- Concentration is corrected for chromatographic purity, residual water, residual solvents and residual inorganics

Solution Standard Verification and Homogeneity

Standard Solution	Lot Number	Verified Concentration (µg/mL) Actual Results	Verified Concentration (µg/mL) Acceptance Criteria	%RSD - Homogeneity Actual Results	%RSD - Homogeneity Acceptance Criteria

- Concentration is verified through multiple analyses and is calculated as the average of multiple analyses compared to an independently prepared calibration solution.
- Homogeneity of the New Lot is ensured through rigorous production process controls statistically analyzed to evaluate risk and verified by analysis. The % RSD of samples pulled from across the lot demonstrate homogeneity of the New Lot.
- The % RSD of the Previous Lot represents variability of the analysis performed at the time of release.

Traceability

- Gravimetrically prepared using qualified balances calibrated semi-annually by Mettler Toledo using NIST traceable weights. Calibration verification performed weekly and prior to each use utilizing NIST traceable weights. Each balance has been assigned a minimum weighing by Mettler Toledo taking into consideration the balance and installed environmental conditions to ensure weighing complies with USP tolerances of no more than 0.10% relative error.
- Concentration is verified against an independently prepared 4-point calibration curve gravimetrically prepared using balances calibrated to NIST.
- In addition, each neat material utilized has been identified and thoroughly characterized through the use of multiple analytical techniques. Spectral data is provided on subsequent pages of the COA.

Cerilliant certifies that this standard meets the specifications stated in this certificate and warrants this product to meet the stated acceptance criteria through the expiration/retest date when stored unopened as recommended. Product should be used shortly after opening to avoid concentration changes due to evaporation. Warranty does not apply to ampoules stored after opening.

Catalog Number: EF-985
Solution Lot: ER02241603
Expiration Date: April 2026
Solvent: n-Nonane
Volume per Ampule: Not less than 1.2 mL
Storage: Store at room temperature. Do not store cold.
Intended Use: For R&D/analytical purposes only. Not suitable for human or animal consumption.
Safety: **Danger. See Safety Data Sheet.**

- Ampules are overfilled to ensure a minimum 1.2 mL volume. We advise laboratories to quantitatively transfer desired volumes of this standard using established good laboratory practices to dilute to the desired concentration.

Component	Solution Purity	Certified Concentration
1,2,3,6,7,8-Hexachlorodibenzofuran-$^{13}C_{12}$	99.6%	50.00 ± 0.23 µg/mL

- Uncertainty of the concentration is expressed as an expanded uncertainty in accordance with ISO 17025 and Guide 34 at the approximate 95% confidence interval using a coverage factor of k = 2 and has been calculated by statistical analysis of our production system and incorporates uncertainty of the purity factor, material density, and balance and weighing technique.
- This standard is prepared gravimetrically and mass results are reported on the conventional basis for weighing in air. Concentration is calculated based on: the actual measured mass; Purity Factor of the analyte(s); measured mass of the solution; and the density of the pure diluent at 20 °C.
- Concentration is corrected for chromatographic purity, residual water, residual solvents and residual inorganics.

Solution Standard Verification and Homogeneity

Standard Solution	Lot Number	Verified Concentration (µg/mL) Actual Results	Verified Concentration (µg/mL) Acceptance Criteria	%RSD - Homogeneity Actual Results	%RSD - Homogeneity Acceptance Criteria
New Lot	ER02241603	50.09	± 5%	0.4	≤ 3%
Previous Lot	ER053107-03	50.81	± 5%	0.3	≤ 3%

- Concentration is verified through multiple analyses and is calculated as the average of multiple analyses compared to an independently prepared calibration solution.
- Homogeneity of the New Lot is ensured through rigorous production process controls statistically analyzed to evaluate risk and verified by analysis. The % RSD of samples pulled from across the lot demonstrate homogeneity of the New Lot.
- The % RSD of the Previous Lot represents variability of the analysis performed at the time of release.

Traceability

- Gravimetrically prepared using qualified balances calibrated semi-annually by Mettler Toledo using NIST traceable weights. Calibration verification performed weekly and prior to each use utilizing NIST traceable weights. Each balance has been assigned a minimum weighing by Mettler Toledo taking into consideration the balance and installed environmental conditions to ensure weighing complies with USP tolerances of no more than 0.10% relative error.
- Concentration is verified against an independently prepared 4-point calibration curve gravimetrically prepared using balances calibrated to NIST.
- In addition, each neat material utilized has been identified and thoroughly characterized through the use of multiple analytical techniques. Spectral data is provided on subsequent pages of the COA.

Cerilliant certifies that this standard meets the specifications stated in this certificate and warrants this product to meet the stated acceptance criteria through the expiration/retest date when stored unopened as recommended. Product should be used shortly after opening to avoid concentration changes due to evaporation. Warranty does not apply to ampoules stored after opening.

Expiration Date:	October 2026
Solvent:	n-Nonane
Volume per Ampule:	Not less than 1.2 mL
Storage:	Store at room temperature. Do not store cold.
Intended Use:	For R&D/analytical purposes only. Not suitable for human or animal consumption.
Safety:	**Danger. See Safety Data Sheet.**

- Expiration Date has been established through real time stability studies.
- Ampoules are overfilled to ensure a minimum 1.2 mL volume. We advise laboratories to quantitatively transfer desired volumes of this standard using established good laboratory practices to dilute to the desired concentration.

Component	Solution Purity	Certified Concentration
1,2,3,4,6,7,8-Heptachlorodibenzo-p-dioxin-$^{13}C_{12}$	99.4%	49.99 ± 0.23 µg/mL

- Uncertainty of the concentration is expressed as an expanded uncertainty in accordance with ISO 17025 and Guide 34 at the approximate 95% confidence interval using a coverage factor of k = 2 and has been calculated by statistical analysis of our production system and incorporates uncertainty of the purity factor, material density, and balance and weighing technique.
- This standard is prepared gravimetrically and mass results are reported on the conventional basis for weighing in air. Concentration is calculated based on: the actual measured mass; Purity Factor of the analyte(s); measured mass of the solution; and the density of the pure diluent at 20 °C.
- Concentration is corrected for chromatographic purity, residual water, residual solvents and residual inorganics.

Solution Standard Verification and Homogeneity

Standard Solution	Lot Number	Verified Concentration (µg/mL) Actual Results	Verified Concentration (µg/mL) Acceptance Criteria	%RSD - Homogeneity Actual Results	%RSD - Homogeneity Acceptance Criteria
New Lot	ER09271601	51.51	± 5%	0.2	≤ 3%
Previous Lot	ER111010-01	52.04	± 5%	0.2	≤ 3%

- Concentration is verified through multiple analyses and is calculated as the average of multiple analyses compared to an independently prepared calibration solution.
- Homogeneity of the New Lot is ensured through rigorous production process controls statistically analyzed to evaluate risk and verified by analysis. The % RSD of samples pulled from across the lot demonstrate homogeneity of the New Lot.
- The % RSD of the Previous Lot represents variability of the analysis performed at the time of release.

Traceability

- Gravimetrically prepared using qualified balances calibrated semi-annually by Mettler Toledo using NIST traceable weights. Calibration verification performed weekly and prior to each use utilizing NIST traceable weights. Each balance has been assigned a minimum weighing by Mettler Toledo taking into consideration the balance and installed environmental conditions to ensure weighing complies with USP tolerances of no more than 0.10% relative error.
- Concentration is verified against an independently prepared 4-point calibration curve gravimetrically prepared using balances calibrated to NIST.
- In addition, each neat material utilized has been identified and thoroughly characterized through the use of multiple analytical techniques. Spectral data is provided on subsequent pages of the COA.

Cerilliant certifies that this standard meets the specifications stated in this certificate and warrants this product to meet the stated acceptance criteria through the expiration/retest date when stored unopened as recommended. Product should be used shortly after opening to avoid concentration changes due to evaporation. Warranty does not apply to ampoules stored after opening.

- Expiration Date has been established through real time stability studies.
- Ampules are overfilled to ensure a minimum 1.2 mL volume. We advise laboratories to quantitatively transfer desired volumes of this standard using established good laboratory practices to dilute to the desired concentration.

Component	Solution Purity	Certified Concentration
2,3,7,8-Tetrachlorodibenzo-p-dioxin-$^{13}C_{12}$	99.4%	50.00 ± 0.23 µg/mL

- Uncertainty of the concentration is expressed as an expanded uncertainty in accordance with ISO 17025 and Guide 34 at the approximate 95% confidence interval using a coverage factor of k = 2 and has been calculated by statistical analysis of our production system and incorporates uncertainty of the purity factor, material density, and balance and weighing technique.
- This standard is prepared gravimetrically and mass results are reported on the conventional basis for weighing in air. Concentration is calculated based on: the actual measured mass; Purity Factor of the analyte(s); measured mass of the solution; and the density of the pure diluent at 20 °C.
- Concentration is corrected for chromatographic purity, residual water, residual solvents and residual inorganics.

Component	Solution Purity	Certified Concentration
1,2,3,4-Tetrachlorodibenzo-p-dioxin-$^{13}C_{12}$	99.7%	50.00 ± 0.23 µg/mL

- Uncertainty of the concentration is expressed as an expanded uncertainty in accordance with ISO 17025 and Guide 34 at the approximate 95% confidence interval using a coverage factor of k = 2 and has been calculated by statistical analysis of our production system and incorporates uncertainty of the purity factor, material density, and balance and weighing technique.

- Concentration is corrected for chromatographic purity, residual water, residual solvents and residual inorganics.

Solution Standard Verification and Homogeneity

Standard Solution	Lot Number	Verified Concentration (µg/mL) Actual Results	Verified Concentration (µg/mL) Acceptance Criteria	%RSD - Homogeneity Actual Results	%RSD - Homogeneity Acceptance Criteria
New Lot	ER11081602	51.01	± 10%	0.1	≤ 3%

Calibration verification performed weekly and prior to each use utilizing NIST traceable weights. Each balance has been assigned a minimum weighing by Mettler Toledo taking into consideration the balance and installed environmental conditions to ensure weighing complies with USP tolerances of no more than 0.10% relative error.
- Concentration is verified against an independently prepared 4-point calibration curve gravimetrically prepared using balances calibrated to NIST.
- In addition, each neat material utilized has been identified and thoroughly characterized through the use of multiple analytical techniques. Spectral data is provided on subsequent pages of the COA.

Cerilliant certifies that this standard meets the specifications stated in this certificate and warrants this product to meet the stated acceptance criteria through the expiration/retest date when stored unopened as recommended. Product should be used shortly after opening to avoid concentration changes due to evaporation. Warranty does not apply to ampoules stored after opening.

INTENDED USE:

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compounds it contains.

HANDLING:

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

SYNTHESIS / CHARACTERIZATION:

Our products are synthesized using single-product unambiguous routes whenever possible. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

HOMOGENEITY:

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be <5% RSD. New solution lots of existing products, as well as mixtures and calibration solutions, are compared to older lots in a similar manner. This further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

UNCERTAINTY:

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, $u_c(y)$, of a value y and the uncertainty of the independent parameters x_1, x_2,...x_n on which it depends is:

$$u_c(y(x_1, x_2, ...x_n)) = \sqrt{\sum_{i=1}^{n} u(y, x_i)^2}$$

where x is expressed as a relative standard uncertainty of the individual parameter.

The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of ±5% (calculated with a coverage factor of 2 and a level of confidence of 95%) is stated on the Certificate of Analysis for all of our products.

TRACEABILITY:

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an external ISO/IEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISO/IEC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISO/IEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

EXPIRY DATE / PERIOD OF VALIDITY:

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

LIMITED WARRANTY:

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

QUALITY MANAGEMENT:

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO 17034 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

- Uncertainty of the concentration is expressed as an expanded uncertainty in accordance with ISO 17025 and ISO 17034 at the approximate 95% confidence interval using a coverage factor of k = 2 and has been calculated by statistical analysis of our production system and incorporates uncertainty of the purity factor, material density, and balance and weighing technique.
- Stock solution concentration is corrected for chromatographic purity, residual water, residual solvents and residual inorganics.

Cerilliant certifies that this standard meets the specifications stated in this certificate and warrants this product to meet the stated acceptance criteria through the expiration/retest date when stored unopened as recommended. Product should be used shortly after opening to avoid concentration changes due to evaporation. Warranty does not apply to ampoules stored after opening.

Traceability

- This standard has been gravimetrically prepared using balances that have been fully qualified and calibrated to ISO 17025 requirements. All calibrations utilize NIST traceable weights which are calibrated externally by a qualified ISO 17025 accredited calibration laboratory to NIST standards. Qualification of each balance includes the assignment of a minimum weighing by a qualified and ISO 17025 accredited calibration vendor taking into consideration the balance and installed environmental conditions to ensure compliance with USP tolerances of NMT 0.10% relative error.
- Concentration is verified against an independently prepared calibration solution gravimetrically prepared using balances calibrated to NIST.

- Concentration is verified through multiple analyses and is calculated as the average of multiple analyses compared to an independently prepared calibration curve.
- Homogeneity is ensured through rigorous production process controls statistically analyzed to evaluate risk and verified by analysis. The %RSD of samples pulled from across the lot demonstrate homogeneity.
- Product is compared to prior lot and meets acceptance criteria of ± 10%.
