Executive Summary

Stormwater discharges from the Santa Susana Field Laboratory (SSFL) are currently regulated by the Los Angeles Regional Water Quality Control Board (LARWQCB) under the *National Pollutant Discharge Elimination System (NPDES) Permit No. CA0001309 for the Boeing Company, SSFL, Canoga Park, CA, Order No. R4-2015-0033* ("2015 Permit") (LARWQCB, 2015). The 2015 Permit requires the Surface Water Expert Panel (SWEP) to conduct annual evaluations of the previous year's Permit limit exceedances and Best Management Practice (BMP) performance, provide new BMP recommendations as needed, and to submit a one-time workplan to outline this process. The *Site-Wide Stormwater Work Plan and 2014/15 Annual Report* ("2015 Work Plan") (Santa Susana Surface Water Expert Panel and Geosyntec Consultants, 2015a) was intended to satisfy the work plan requirement. In addition, in August 2022, the LARWQCB adopted a Memorandum of Understanding[1] (MOU) as a part of a comprehensive framework that establishes specific cleanup protocols and timelines for Boeing, and involves an agreement between Boeing and the Department of Toxic Substances Control (DTSC). The MOU outlines additional responsibilities for the Surface Water Expert Panel including modeling post-cleanup stormwater quality at SSFL outfalls that Boeing areas drain to, establishing background stormwater concentration thresholds, and designing a post-cleanup stormwater monitoring plan within Boeing areas of SSFL.

This 2021/22 Annual Report summarizes the data collected, evaluations performed, and the SWEP's findings and recommendations for the 2021/22 reporting year (June 1, 2021 to May 30, 2022), and follows the 2015 Work Plan. This report summarizes observed rainfall data, stormwater discharges and sampling at the SSFL outfalls, permit limit and benchmark exceedances, potential causes of exceedances, assessment of BMP performance, and recommendations for BMP and monitoring improvements.

A total of 18.2 inches of rainfall was measured in the 2021/22 reporting year, which is above the long-term average annual rainfall at SSFL of 16.8 inches[2]. Total prior year rainfall (2020/21) was 4.5 inches, marking the lowest rainfall year recorded in a combined 56-year period between 1959 and 2022 and the only year without any measurable stormwater discharges at the NPDES outfalls. A total of eight qualifying rain events occurred in 2021/22, where a "rain event" is defined by the Permit as greater than 0.1 inches of rainfall in 24 hours, preceded by at least 72 hours of dry weather. Of the eight rain events, three produced discharge at one or more NPDES outfalls, including Outfalls 001, 002, 008, 009, 011, and 018. No sampleable discharge (and thus no opportunities for Permit Limit or Benchmark exceedances) occurred at Outfalls 003, 004, 005, 006, 007, 010, 019, or 020.

[1] MEMORANDUM OF UNDERSTANDING ESTABLISHING THE PROCESSES, METHODOLOGIES, AND STANDARDS FOR ASSESSING STORMWATER DISCHARGES AND APPLICABLE REQUIREMENTS FOLLOWING THE BOEING COMPANY SOIL CLEANUP AT THE SANTA SUSANA FIELD LABORATORY SITE

[2] Data from the Simi Hills – Rocketdyne Lab gauge (Ventura County Watershed Protection District site 249) were used to determine annual rainfall from 1958/59 through 1977/78 and from 1984/85 through 2000/01. Rainfall data from 2001/02 through 2021/22 were recorded at the Area 4 gauge, which was relocated to Area 1 on January 1, 2013), resulting in a combined period of record of 56 years.

In the 2021/22 reporting year, the following exceedances were observed and are discussed in more detail in Section 2.2.1:

- Outfall 001: On December 26, 2021, benchmark limits were exceeded for iron (result of 7.1 ug/L compared to benchmark of 0.3 ug/L), manganese (result of 110 ug/L compared to benchmark of 50 ug/L), and TCDD TEQ (no DNQ) (result of 2.9E-08 ug/L compared to benchmark of 2.8E-08).
- Outfall 002: On December 26, 2021, the benchmark limit was exceeded for iron (result of 2.5 ug/L compared to benchmark of 0.3 ug/L).
- Outfall 009: On December 15, 2021, the effluent limit was exceeded for copper (result of 15 ug/L compared to limit of 13 ug/L). On December 26, 2021, the effluent limit was exceeded for chronic toxicity[3] (result of 57.52% compared to limit of 50%).
- Outfall 011: On December 30, 2021, effluent limits were exceeded for iron (result of 5.1 ug/L compared to limit of 0.3 ug/L), manganese (result of 100 ug/L compared to limit of 50 ug/L), and TCDD TEQ (no DNQ) (result of 3.9E-08 compared to limit of 2.8E-08).
- Outfall 018: On December 28, 2021, the effluent limit was exceeded for BOD[4] (result of 66 mg/L compared to limit of 50 ug/L). On January 5, 2022, the effluent limit was exceeded for iron (result of 0.5 ug/L compared to limit of 0.3 ug/L).

Based on multiple lines of evidence, the 2021/22 exceedances are believed to be from natural background soils and non-industrial sources (e.g., soils near treated wood poles), with the exception of copper at Outfall 009 and BOD at Outfall 018 which are both believed to be due to lab error. Additionally, TCDD TEQ (no DNQ) exceedances at Outfalls 001 and 011 could also have contributions from impacted soils based on concentrations measured in RCRA Feasibility Investigation (RFI) surface soils. However, on average, the majority of RFI surface soils in these watersheds have TCDD TEQ (no DNQ) concentrations similar to background soils, with just the highest percentile concentrations exceeding those of background datasets, on par with concentrations observed in soils near poles. Where impacted soils could not be ruled out as a source, new BMPs or improvements/repairs are proposed.

Other key findings include the following, which are discussed in more detail in Section 4:

- The passive distributed treatment controls in the Outfall 009 watershed continue to perform well despite many years of operation. Constituent loads are being reduced, both because concentrations are being reduced, and because runoff volumes are being reduced by phased upstream pavement and building removal accompanied by revegetation and stormwater runoff volume reduction in BMPs.
- The two active stormwater treatment systems (SWTSs) are performing well, as evidenced by compliance results at Outfalls 011 and 018 as well as reductions in concentration observed between untreated influent and treated outfall discharge samples. Notably, no analytes were detected above California Primary Maximum Contaminant Levels (MCLs) in the untreated influent samples, which experience extended pond storage.
- Boeing and NASA continue to implement SWEP BMP and monitoring recommendations site-wide.

[3] Sample analysis was conducted outside of required hold time, introducing uncertainty into the result.
[4] Sample analysis was conducted outside of required hold time, introducing uncertainty into the result.

- Exceedances measured in 2021/22, none of which exceeded primary drinking water standards (also referred to as MCLs), do not change prior stormwater Human Health Risk Assessment (HHRA) conclusions that there are not elevated human health risks from exposure to SSFL stormwater discharge through the exposure pathways that were evaluated. Furthermore, since drinking ingestion of stormwater was not originally evaluated as an exposure pathway in the HHRA, an additional evaluation was performed this year to assess human health risks through drinking water (despite this not being a known use of SSFL stormwater at or near the NPDES outfalls). This evaluation demonstrates that SSFL stormwater discharges during the 2021/22 year are not found to represent an elevated risk to human health through drinking.

Recommendations are discussed in Section 5 and include the following:

- The SWEP continues to recommend accelerated source removal, including the proposed Imminent and Substantial Endangerment (ISE) measures at the Former Shooting Range and Area 1 Burn Pit.
- To address benchmark and Permit limit exceedances at Outfalls 001 and 011, the SWEP recommends evaluation for new culvert modifications (i.e., stormwater media filters) where drainages crosse the gravel road downstream of the west side of the Area I Burn Pits; an upland stormwater treatment control measure (e.g., sedimentation basin) that could be useful during future site cleanup around the Area I Burn Pit; and repairs to the R-1 pond berm (to enable increased stormwater storage and treatment).
- To address Permit limit exceedances at Outfall 009, the SWEP recommends the continued observation and as-needed repairs of all distributed treatment BMPs in this watershed.
- The SWEP recommends improvements to the stormwater monitoring program, including QA/QC protocols for analysis of compliance samples collected by Boeing and refinements to the locations and frequency of non-compliance/voluntary samples collected by Boeing and NASA, to continue to refine the dataset supporting source identification and BMP performance assessment. These recommendations will be implemented in the 2022/23 reporting year.

The SWEP will continue to oversee the follow-through on these recommendations into the 2022/23 season. The SWEP will also continue to work on activities required by the recent MOU, which include modeling and planning monitoring of post-cleanup stormwater quality.

The SWEP looks forward to engaging with the public at the next public meeting on November 17, 2022 where these results and recommendations will also be presented.

1 Introduction

The Santa Susana Field Laboratory (SSFL) occupies approximately 2,850 acres located at the top of Woolsey Canyon Road in the Simi Hills of Ventura County, California. During wet weather, SSFL has the potential to discharge stormwater runoff impacted by constituents from the facility. As such, stormwater discharges from SSFL are currently regulated by the Los Angeles Regional Water Quality Control Board (LARWQCB) under the *National Pollutant Discharge Elimination System (NPDES) Permit No. CA0001309 for the Boeing Company, SSFL, Canoga Park, CA, Order No. R4-2015-0033* ("2015 Permit") (LARWQCB, 2015). The 2015 Permit[5] became effective on April 1, 2015, and states the following:

> *"The Discharger has agreed to maintain the Surface Water Expert Panel. With input from the Surface Water Expert Panel, the Discharger shall submit annual reports that describe the previous year's monitoring results, evaluation of existing BMP performance, and submit a workplan that includes recommendations for modified and/or new storm water controls and monitoring that will address exceedances from any Outfall addressed by this Permit. The Discharger shall also support the Surface Water Expert Panel in organizing periodic public interaction events and encouraging public communication involvement. The first annual report shall be due within 6 months of the effective date of this Permit [October 1, 2015]."*

The *Site-Wide Stormwater Work Plan and 2014/15 Annual Report* ("2015 Work Plan") (Santa Susana Surface Water Expert Panel and Geosyntec Consultants, 2015a) was intended to satisfy the work plan requirement specified in the 2015 Permit. As the 2021/22 Annual Report, this document summarizes results and findings of the 2021/22 reporting year (June 1, 2021 to May 30, 2022) and is presented in adherence to commitments outlined in the 2015 Work Plan. Tentative Waste Discharge Requirements and National Pollutant Discharge Elimination System Permit were released for public comment on December 8, 2021 and scheduled to be heard at the February 10, 2022 LARWQCB meeting. LARWQCB decided to postpone the public hearing for its continued deliberation on this matter to a future date. The existing 2015 Work Plan and Permit will remain effective until superseded by a newly adopted Permit.

On August 11, 2022 the LARWQCB held a public meeting and adopted a resolution to approve the proposed Memorandum of Understanding[6] (MOU) with some revisions in response to public comment. The MOU is part of a comprehensive framework that establishes specific cleanup protocols and timelines for Boeing, and also involves an agreement between Boeing and the Department of Toxic Substances Control (DTSC). The MOU outlines additional responsibilities for the Surface Water Expert Panel including modeling stormwater quality at SSFL outfalls that Boeing cleanup areas drain to, establishing background stormwater concentration thresholds, and designing a post-cleanup stormwater monitoring plan within Boeing areas of SSFL.

---

[5] Most recently the Site was regulated under the *National Pollutant Discharge Elimination System (NPDES) Permit No. CA0001309 for the Boeing Company, SSFL, Canoga Park, CA, Order No. R4-2010-0090* ("2010 Permit") from 2010 to April 1, 2015. The site has been regulated under individual NPDES permits since 1998.

[6] MEMORANDUM OF UNDERSTANDING ESTABLISHING THE PROCESSES, METHODOLOGIES, AND STANDARDS FOR ASSESSING STORMWATER DISCHARGES AND APPLICABLE REQUIREMENTS FOLLOWING THE BOEING COMPANY SOIL CLEANUP AT THE SANTA SUSANA FIELD LABORATORY SITE

1.1 Background

The SSFL site (the "Site") is jointly owned by the Boeing Company (Boeing) and the federal government. The National Aeronautics and Space Administration (NASA) administers the portion of the property owned by the federal government. As shown in Figure 1, the site is divided into four administrative areas (Areas I, II, III, and IV), with undeveloped land area surrounding the Site to the north and south. Administrative Areas I and III are operated by Boeing, who owns the majority of Area I and all of Area III. The federal government owns a 40-acre portion of Area I and the entirety of Area II, both administered by NASA. While Area IV land is Boeing-owned, the Department of Energy (DOE) is responsible for its cleanup. Boeing no longer serves as a DOE contractor; however, Boeing and preceding contractors performed work at the DOE Energy Technology Engineering Center (ETEC) site in Area IV prior to the 1998 Department of Energy remediation contract with Boeing. The DOE owns specific facilities located within an approximately 90-acre portion of Area IV. Industrial operations at the Site have ceased, and current activities include environmental monitoring and sampling, demolition, remediation, and ongoing remedial planning. Undeveloped land and open space at the Site provide wildlife habitat and natural area.

Stormwater discharges[7] from the Site are typically captured and treated at or upstream of outfalls up to a design storm size. Outfalls 011 and 018 have had advanced stormwater conveyance and treatment systems (SWTSs) since 2012 to capitalize on the natural storage provided by existing ponds, while Outfalls 008 and 009 use distributed source controls with natural treatment systems in lieu of the outfall-based treatment approach due to their topography. Outfalls 001 and 002 present exceptions, as stormwater discharges from these outfalls are comprised of runoff from undeveloped areas comingled with stormwater discharges from Outfalls 011 and 018, respectively. Interim Source Removal Action (ISRA) and Best Management Practices (BMP) programs were implemented at Outfalls 008 and 009 beginning in 2009, with LARWQCB oversight and participation to facilitate 2010 Permit compliance through a dual approach focused on remediation of surface soils to thresholds defined for NPDES constituents of concern (COCs) and implementation of distributed treatment controls for stormwater runoff from prioritized subareas. The 2010 BMP Plan (MWH et al., 2010) was developed under the oversight of the Surface Water Expert Panel ("SWEP" or "Expert Panel") for the Outfall 008 and 009 Watersheds. The 2015 Work Plan subsequently replaced the 2010 BMP Plan as an overall strategy for improving site-wide stormwater discharge compliance with NPDES permit requirements and continuing critical public outreach and engagement efforts regarding stormwater subjects.

The Surface Water Expert Panel consists of Dr. Robert Pitt, University of Alabama, emeritus; Dr. Robert Gearheart, California State Polytechnic University, Humboldt; Dr. Michael Stenstrom, University of California, Los Angeles; Dr. Michael Josselyn, WRA Environmental Consultants; and Mr. Jonathan Jones, Wright Water Engineers. The Expert Panel continues to oversee stormwater planning and design work at SSFL, providing key input on monitoring and source removal activities, as well as a variety of NPDES Permit compliance topics. The Expert Panel oversees scientific studies related to SSFL stormwater quality and BMP design considerations, reviewed the stormwater Human Health Risk Assessment (HHRA), and engages with the public regarding stormwater activities at SSFL. The original Surface Water

[7] Treated groundwater discharges are also covered in the 2015 Permit, however, the 2015 Work Plan scope is limited to stormwater discharges.

Expert Panel objective to improve stormwater at NPDES Outfalls 008 and 009 was expanded in the 2015 Work Plan to include all NPDES Outfalls, as required by the 2015 Permit. As in recent years, the Surface Water Expert Panel reviewed the 2021/22 Quarterly Discharge Monitoring Reports (DMRs) and federal government construction SWPPPs, providing input and technical perspective.

1.2 Site Overview

Outfalls regulated under the 2015 NPDES Permit are listed in Table 1 and depicted in Figure 1. The NPDES Permit states that 60% of the annual stormwater discharge from SSFL exits the property via two southerly discharge points (Outfalls 001 and 002) to Bell Creek, a tributary to the Los Angeles River. Upstream Outfalls 011 and 018 contribute discharge to Outfalls 001 and 002, respectively. Per the 2015 Permit, injection of treated groundwater is acceptable at Outfall 019, though the discharge of surface water is not planned nor permitted at Outfalls 019 or 020. With the exception of naturally occurring seeps and springs where groundwater is known to comingle with stormwater and could potentially contribute constituents of concern (COCs) to stormwater discharges at the NPDES Outfalls, groundwater considerations are not included in the scope of the Expert Panel. A separate Groundwater Expert Panel at SSFL actively oversees Boeing-related groundwater matters, including groundwater treatment and assessment of naturally occurring seeps and springs.

Stormwater runoff from northern areas of the Site (Outfalls 003 through 007 and 010) is transferred to Silvernale Pond for treatment prior to discharge at Outfall 018. Runoff in excess of the storage and transfer system capacity is treated by flow-through media filters and discharges at Outfalls 003 through 007 and at Outfall 010, which discharge to the Calleguas Creek watershed. Stormwater conveyance and treatment systems (SWTSs) have been in place at Outfalls 011 and 018 since 2012. The SWTSs provide advanced stormwater treatment using ActiFlo coagulation and filtration systems, with stormwater ponds upstream for flow equalization and pretreatment by sedimentation. The SWTS at Outfall 011 has experienced lapses in operation throughout its lifetime, most recently due to damage from the Woolsey Fire, however, it was operational in 2021/22. Stormwater runoff from the Outfall 008 and 009 Watersheds is not captured and treated by a central SWTS[8], given the location, size, and terrain of these watersheds, coupled with the inability to store large volumes of stormwater in them practically. As described in the 2010 BMP Plan, due to topographical constraints, distributed stormwater treatment and an iterative, adaptive management-based approach are applied within both the Outfall 008 and 009 Watersheds. Stormwater runoff that discharges at Outfall 009 naturally flows to Arroyo Simi and subsequently to Calleguas Creek. Stormwater runoff from Happy Valley at Outfall 008 flows via Dayton Canyon Creek to Chatsworth Creek, which flows south to join Bell Creek southwest of the intersection of Shoup Avenue and Sherman Way. Bell Creek then continues southeast toward its confluence with the Los Angeles River.

Table 1. NPDES Outfall Descriptions

NPDES Outfall[1]	Description
001	Downstream of Outfall 011; discharges to Bell Creek
002	Downstream of Outfall 018; discharges to Bell Creek
003	Runoff transferred to Silvernale for treatment prior to discharge at Outfall 018[2]

[8] An exception to this is where a portion of runoff from the Helipad in Area II of the Outfall 009 Watershed is captured and piped to Silvernale Pond for treatment by the Outfall 018 SWTS.

NPDES Outfall[1]	Description
004	Runoff transferred to Silvernale for treatment prior to discharge at Outfall 018[2]
005	Runoff transferred to Silvernale for treatment prior to discharge at Outfall 018[2]
006	Runoff transferred to Silvernale for treatment prior to discharge at Outfall 018[2]
007	Runoff transferred to Silvernale for treatment prior to discharge at Outfall 018[2]
008	Stormwater from Happy Valley; discharges to Dayton Creek
009	Stormwater from Northern Drainage; discharges to Arroyo Simi
010	Runoff transferred to Silvernale for treatment prior to discharge at Outfall 018[2]
011	Stormwater and perimeter pond treated by SWTS; discharges to Outfall 001
018	Stormwater and R-2 pond, treated by SWTS; discharges to Outfall 002
019	Injection of treated groundwater (GET System); no surface discharge
020	Not planned for use; injection of treated groundwater (GET System); no surface discharge

[1]Outfalls 012 through 017 are not included in the 2015 Permit

[2]Stormwater runoff in excess of storage and transfer capacities is treated by media filters at individual outfalls before discharging to tributaries of Calleguas Creek.

1.3 Existing Stormwater Treatment

BMPs have been implemented throughout the Site to treat stormwater prior to discharge, and extensive erosion and sediment control BMPs, revegetation, stabilization of repaved roads, and other soil stabilization activities have also been implemented across the Site. Impervious surfaces such as building roofs and parking lots have been removed and disconnected by reintroducing vegetation and open space between them, effectively restoring the areas to natural conditions. Figure 2 presents the major structural treatment control BMPs implemented at the Site but does not include Site-wide erosion and sediment control BMPs, unpaved road control measures, building demolitions, and paved areas converted by soil scarification and revegetation. Major structural BMPs are summarized in the *ISRA Performance Monitoring and BMP Monitoring for the Outfalls 008 and 009 Watersheds, 2014/2015 Rainy Season* ("2015 Annual Report for Outfalls 008 and 009") (MWH *et al.*, 2015), the 2015 BMP Plan (Haley & Aldrich, 2015), and subsequent Annual Reports. Major structural BMPs include the following, listed by implementation date:

- 2009: Outfall 009 Culvert Modifications (CMs)
- 2010: Outfall 008 ISRA Excavations
- 2011: Outfall 009 Helipad Berms and Pumps
- 2011: Outfall 011 Stormwater Conveyance and Treatment System (SWTS)
- 2011: Outfall 018 Stormwater Conveyance and Treatment System (SWTS)
- 2012: Outfall 009 B-1 Sedimentation Basin and Media Filter
- 2012: Outfall 009 Northern Drainage Restoration Measures
- 2012: Outfall 009 CM-9 Additional Improvements
- 2013: Outfall 009 Lower Parking Lot Sedimentation Basin and Biofilter

[9] The power supply connection to the ELV treatment BMP was damaged in the Woolsey Fire rendering it inoperable for the 2018/19 season. A generator was installed in September 2019, and the BMP was operational again beginning in 2019/20.

- 2022: R-1 Pond Berm Repair

Stormwater from Outfall 011 is pumped to the R-1 Pond for settling and evaporation. The pond also serves as added storage to reduce stormwater discharges. When the runoff exceeds the storage capacity of the pond, stormwater is treated using an advanced SWTS. Treated stormwater is discharged at Outfall 011 and then flows through a natural channel to Outfall 001. Following the November 2018 Woolsey Fire, conveyance pipelines to the Outfall 011 SWTS were damaged and stormwater runoff at Outfall 011 was instead treated only by a flow-through media filter for the 2018/19 water year. The Outfall 011 SWTS was repaired in late 2019 and operational again prior to the first 2019/20 storm event. During the most recent 2021/22 season, a berm on the R-1 Pond was compromised during the peak 24-hr rain event on 1/1/2022, causing the pond to discharge before reaching its capacity under typical operations resulting in stormwater discharge at Outfall 011 that was partially treated by the media filter at the outfall. The berm underwent repair in October 2022, to restore the pond volume to its full capacity.

Stormwater runoff up to the outfall-specific design volumes at Outfalls 003, 004, 005, 006, 007, 009[10], and 010 is pumped to Silvernale Pond before being treated by the Outfall 018 SWTS alongside stormwater runoff from the local Outfall 018 Watershed. The Outfall 018 SWTS has been shown to be highly effective at reducing both the magnitude and frequency of Permit Limit exceedances (Santa Susana Surface Water Expert Panel and Geosyntec Consultants, 2019).

Distributed BMPs in the Outfall 009 Watershed, including widespread revegetation, erosion and sediment controls, and natural treatment BMPs, have also been shown to be effective at reducing COC concentrations in stormwater. Statistical evaluations of observed influent versus effluent concentrations at BMPs are included in Appendix D; they indicate significant reductions of COC loads in subareas treated by the structural BMPs, with the largest influent-to-effluent reductions achieved for higher influent concentrations. Northern Drainage inspections are performed annually to identify if stabilization efforts are recommended within the Northern Drainage channel, the primary stormwater conveyance in the Outfall 009 Watershed.

Limited runoff has discharged at Outfall 008 since the 2012 completion of ISRA activities that included identification, evaluation, remediation or stabilization, and restoration of areas containing soils contaminated with COCs. Installation of new erosion and sediment controls, revegetation, and unpaved road stabilization also took place in 2012. From 2013 to 2018, a total of just four discharges occurred at Outfall 008, each sampled and analyzed for between 60 and 200 parameters. Three individual parameter results were of concentrations above 2015 Permit Limits, fewer than historic exceedance rates would predict, highlighting pollutant reduction benefits achieved by the ISRA soil removal activities, revegetation and restoration, and implementation of erosion controls targeting sediment-bound COCs. Of the 9 samples collected and analyzed in 2018/19, 11 individual parameter results indicated concentrations above 2015 Permit Limits. Observed increases in runoff volumes and concentrations above Permit Limits in 2018/19 likely resulted from the combination of above average rainfall and decrease in vegetative cover causing increased stormwater flows and turbidity following the

[10] Stormwater runoff from a small area within the Outfall 009 watershed, the helipad area, is pumped to the storage pond for treatment prior to being discharged from Outfall 018, while stormwater runoff from the remaining, vast majority of the watershed flows to Outfall 009.

Woolsey Fire. No monitoring results were above 2015 Permit Limits out of the 5 samples collected and analyzed in 2019/20, and far below-average rainfall was recorded in 2020/21 such that no outfalls discharged that year. In the single discharge event in 2021/22, no results were measured above Permit Limits.

Sample results collected at distributed structural BMPs have indicated effective BMP performance and further confirmed the water quality improvements achieved by the iterative and adaptive management-based approach that has been employed in these watersheds.

1.4 Permit History

Figure 3 provides a 25-year overview of past SSFL stormwater Permits, Expert Panel involvement, and counts of individual sample results above the 2015 Permit Limits and Benchmarks[11] at regulated Outfalls. The result counts above the 2015 Permit Limits and Benchmarks are not necessarily true exceedances due to some limits being based on annual averages and results prior to 2015 were not subject to the 2015 Permit, however, this provides a static reference point to evaluate conditions over time. Annual frequencies of Permit Limit and Benchmark exceedances are a function of Permit changes, annual rainfall, and implemented treatment control BMPs and stormwater discharge prevention strategies, as well as the natural variability of stormwater quality. Notable milestones presented in Figure 3 include:

- **1998 NPDES Permit:** NPDES Permit No. CA0001309 was issued to regulate wastewater and stormwater discharged from SSFL.
- **2004 NPDES Permit:** The 2004 Permit included new California Toxics Rule (CTR)-based effluent limits and added 11 new compliance monitoring locations. The number of Benchmark and Permit Limits exceedances increased in response to the additional regulatory requirements.

[11] While the discharge of stormwater runoff with constituents in excess of the effluent limitation is prohibited at most outfalls, benchmarks are provided for Outfalls 001 and 002. Benchmarks are defined in the 2015 Permit as "a water quality based effluent limit or a performance based limit that is used to evaluate the performance of best management practices (BMPs) with regard to the removal of pollutants present in the discharge. In this Order, the benchmarks are established based on water quality based effluent limitations. Exceedance of a benchmark triggers an evaluation of the BMPs implemented at the site. The evaluation may determine that the BMPs require augmentation, upgrading, or replacement. If so, the Discharger must develop a plan to implement the required upgrades and report to the Regional Water Board within 60 days of the reported exceedance. The Discharger shall continue monitoring as directed in the Monitoring and Reporting Program during plan development and implementation."

- **2005 Topanga wildfire**: Approximately 97% of SSFL burned, resulting in an increased number of Permit Limit exceedances compared to other reporting years with similar rainfall.
- **2006 NPDES Permit:** The 2004 Permit was revised to include the waste load allocations (WLAs) specified by applicable TMDLs of downstream waterbodies.
- **2007 Cease and Desist Order (CDO):** In the CDO, the RWQCB required the "assembly of a panel to review site conditions, modeled flow, contaminants of concern, and evaluate the BMPs capable of providing treatment to meet the final effluent limits." The CDO also required BMP planning, performance evaluation, and reporting requirements.
- **2010 NPDES Permit:** No major changes to the Permit. The Expert Panel continued to make data-informed recommendations for BMPs in the Outfall 008 and 009 Watersheds, which were then implemented at the Site as described in Section 1.3.
- In **2011**, following the construction of the Outfall 018 SWTS, stormwater from Outfalls 003 through 007 and Outfall 010 was retained in storage tanks and then transferred to Silvernale Pond before being treated by the SWTS, reducing the number of discharges and exceedance occurrences site-wide.
- **2015 NPDES Permit:** Permit expanded the Expert Panel's charge to all regulated SSFL Outfalls. In response, the Panel continues to review Permit Limits and Benchmark exceedances at all Outfalls, making data-driven BMP recommendations on a site-wide basis. Between 2015-2018 the number of Permit Limits and Benchmark exceedances fell even compared to other years with similar rainfall totals.
- **2018 Woolsey wildfire:** Approximately 80% of SSFL was impacted by the wildfire, and the Site received above-average rainfall in 2018/19. Because of the post-fire hydrophobicity[12] of the soil and loss of vegetative cover, rain events following the fire produced significantly greater runoff volumes as well as an increase in the number of Permit Limits and Benchmark exceedances compared to rain events of similar size during non-fire years. Stormwater runoff volumes and water quality across the SSFL site returned to typically observed levels the following year.

[12] Soils exhibiting hydrophobicity cause water to collect on the soil surface rather than infiltrate into the ground. Wildfires generally cause soils to temporarily become more hydrophobic, increasing water repellent characteristics of the soil and exacerbating erosion with stormwater runoff in post-fire burn areas.

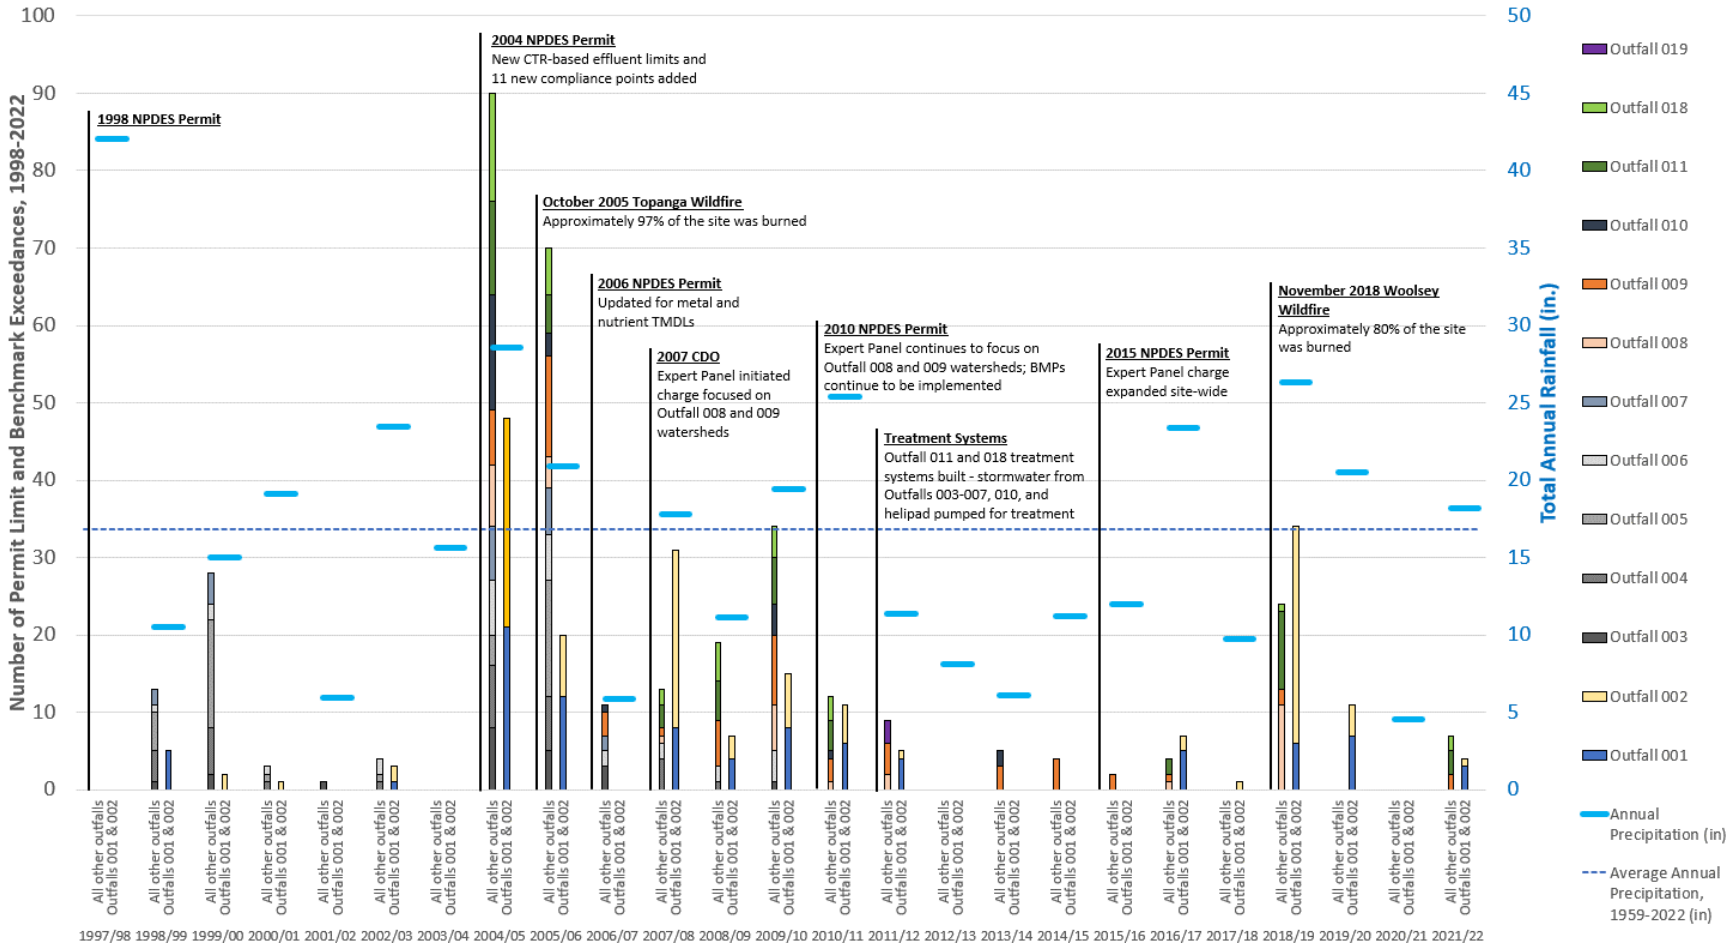

Figure 3. Summary of SSFL Permits, Surface Water Expert Panel Involvement, and Water Quality Compared to 2015 Permit Limits, 1998-2022
(Note: Benchmarks apply at Outfalls 001 and 002; effluent limits apply at all other outfalls)

2 Monitoring Activities

Characteristics of 2021/22 precipitation are presented below, alongside a summary of stormwater sample results from NPDES Permit compliance outfalls and the Outfall 009 Watershed BMP monitoring locations specified in the 2021/22 Sampling and Analysis Plan (Appendix A). Observations from the Northern Drainage assessment and results from the Non-Industrial Sources Special Study are also summarized below.

2.1 2021/22 Rainfall

The long-term average annual rainfall at SSFL from 1959 to 2022 is 16.8 inches[13], occurring primarily in winter storms from October through March. Highly variable periods of above or below average rainfall are common. Little rainfall typically occurs during the April through September dry season. A total of 18.2 inches of rainfall was measured in the 2021/22 reporting year (June 1, 2021 – May 31, 2022). Total prior year rainfall (2020/21) was 4.5 inches, marking the lowest rainfall year recorded in a combined 56-year period between 1959 and 2022 and the only year without any measurable stormwater discharges at the NPDES outfalls. A total of 8 qualifying rain events occurred in 2021/22, where a "rain event" is defined by the Permit as greater than 0.1 inches of rainfall in 24 hours, preceded by at least 72 hours of dry weather. Of the eight rain events, three produced discharge at one or more NPDES outfalls.

Table 2 summarizes historical rainfall totals observed since the submittal of the Surface Water Expert Panel Work Plan in 2010. Six of the last thirteen years have had above average rainfall (bolded in the table below) and there was a five-year drought from 2011/12-2015/16. Figure 4 illustrates the cumulative rainfall recorded in 2021/22 compared to the previous 5 years and the long-term average annual rainfall total.

Table 2. Historical Rainfall at SSFL, since 2010 Surface Water Expert Panel Work Plan

Reporting Year	Annual Rainfall (in)	Percent of Average Annual Rainfall	Number of Qualifying Rain Events
2021/22	**18.2**	**108%**	**8**
2020/21	4.5	27%	5
2019/20	**20.5**	**122%**	**9**
2018/19	**26.3**	**156%**	**12**
2017/18	9.8	58%	4
2016/17	**23.4**	**139%**	**14**
2015/16	12.0	71%	13
2014/15	11.2	67%	9
2013/14	6.1	36%	5
2012/13	8.1	48%	9
2011/12	11.3	67%	10
2010/11	**25.4**	**151%**	**14**
2009/10	**19.5**	**116%**	**11**

Note: Above average annual rainfall totals are **bolded**.

[13] Data from the Simi Hills – Rocketdyne Lab gauge (Ventura County Watershed Protection District site 249) were used to determine annual rainfall from 1958/59 through 1977/78 and from 1984/85 through 2000/01. Rainfall data from 2001/02 through 2021/22 were recorded at the Area 4 gauge, which was relocated to Area 1 on January 1, 2013), resulting in a combined period of record of 56 years.

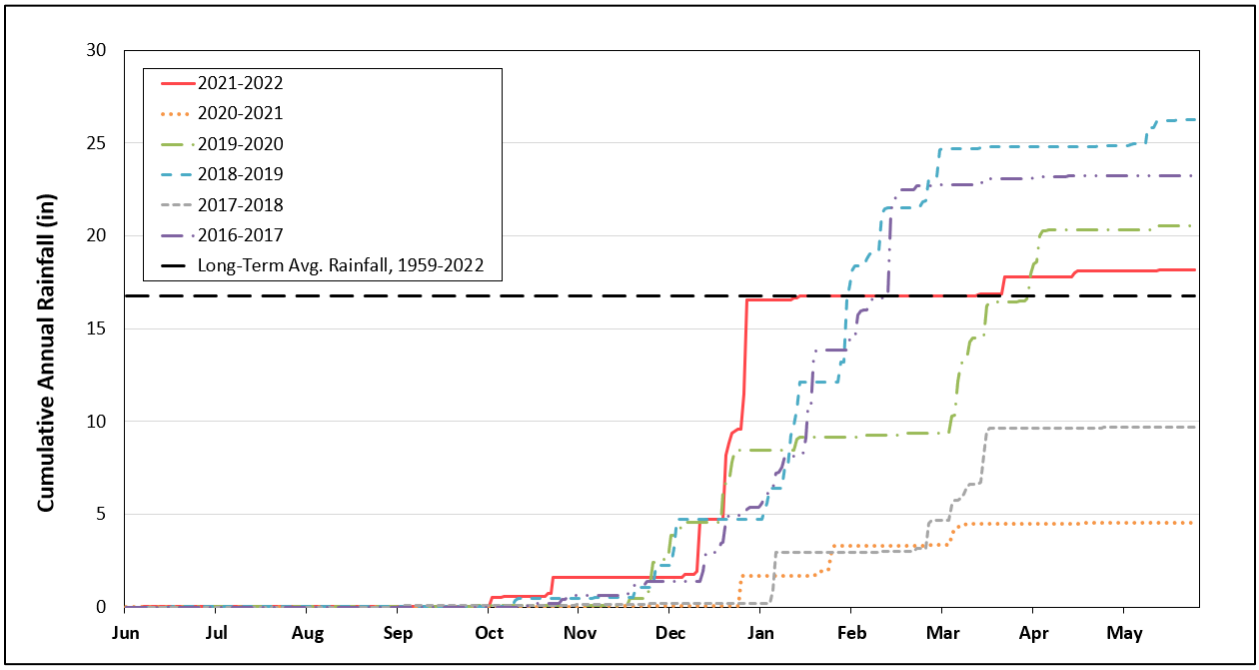

Figure 4. Annual Cumulative Rainfall, 2016-2022

Table 3 summarizes the rain event depths and number of subarea samples collected during each event. The largest rain event of 2021/22 occurred December 22-31, 2021, generating a total of 11.8 inches. The maximum 24-hour rainfall depth during the same storm was 6.22 inches, which is expected to occur once in 25 years based on the point precipitation DDF estimates for SSFL shown in Table 4 (NOAA, 2022), however, this is the highest 24-hour rainfall depth observed at the site since the rainfall record began in 1958. The previous maximum daily rainfall was 5.9 inches recorded on November 17, 1965. The second largest event in 2021/22 occurred December 13-16, 2021, generating a total of 2.96 inches with a maximum 24-hour rainfall intensity of 2.84 inches which can be expected to occur roughly every 1 to 2 years. Overall, these two storms combined measured 14.8 inches of rainfall within a 20-day period, or 81% of the total annual rainfall observed in 2021/22.

Table 3. 2021/22 Rain Event and Monitoring Summary[1]

Rain Event	Total Rainfall (in)	Rain Event Duration (hrs)	Average Rainfall Intensity During Hours with Rainfall (in/hr)	Maximum 1-hr Rainfall Intensity (in/hr)	Maximum 24-hr Rainfall Depth (in)	24-hr Recurrence Interval	Antecedent Dry Period[2] (days)	Subarea Monitoring Samples
10/4/2021	0.48	4	0.16	0.35	0.48	< 1 year	47	None
10/22-25/2021	1.04	64	0.05	0.37	0.86	< 1 year	14	10
12/7-9/2021	0.18	55	0.02	0.04	0.16	< 1 year	43	None
12/13-16/2021	2.96	72	0.11	0.78	2.84	1-2 years	4	27
12/23-31/2021	11.8	196	0.13	0.42	6.22	25 years	7	30
1/15-19/2022	0.22	87	0.02	0.06	0.12	< 1 year	15	None
3/28-29/2022	0.93	21	0.10	0.32	0.93	< 1 year	8	7
4/21-22/2022	0.35	4	0.09	0.17	0.35	< 1 year	23	None
Non-Event Total[3]	0.22	--	--	--	--	--	--	--
Total	18.18	--	--	--	--	--	--	71 samples

[1] Total rainfall, event duration, rainfall duration, average rainfall intensity, and maximum 1-hour rainfall intensity were assessed from rainfall data recorded at a calibrated and maintained weather station within Area I.

[2] Antecedent dry period represents the number of days between the start of the rain event and the last recorded rainfall, regardless of whether it qualified as a rain event.

[3] Non-Qualifying Event Total. The following rainfall measured in 2021/22 did not meet the definition of a qualifying rain event per the NPDES Permit: June 7, 2021 (0.02”), August 18, 2021 (0.04”), October 8, 2021 (0.03"), March 19-20, 2022 (0.09”), and May 20, 2022 (0.04”).

Table 4. NOAA Point Precipitation Depths (inches), Durations, and Frequencies at SSFL

Duration	Average Recurrence Interval					
	1-yr	2-yr	5-yr	10-yr	25-yr	50-yr
1-hour	0.51	0.67	0.87	1.03	1.24	1.41
3-hour	0.95	1.24	1.62	1.92	2.32	2.62
6-hour	1.38	1.8	2.35	2.78	3.36	3.79
12-hour	1.89	2.47	3.21	3.81	4.59	5.18

72-hour (3 day)	3.45	4.69	6.32	7.65	9.46	10.9
96-hour (4 day)	3.74	5.14	7.00	8.54	10.7	12.3

[1]Source: Long-term precipitation depth-duration-frequency (DDF) data, NOAA Precipitation Frequency Data Server (PFDS). NOAA Atlas 14, Volume 6, Version 2. Simi Hills-Rocketdyne Lab, Latitude: 34.2353°, Longitude: -118.6759°.

Figure 5 presents observed rainfall intensities throughout the 2021/22 rainy season. The 1-hour rainfall intensities were generally below the 1-year recurrence interval depth, with the exception of one hour during the 12/13-16/2021 storm event where the intensity was near that of a 5-year event. The 3 and 6-hour duration intensities reached the 2-5-year event depth, while the 12-96-hour durations saw intensities representative of 10-year storm events. The 24-hour period is the only one to see rainfall intensities exceed the 25-year storm depth.

2.2 2021/22 Stormwater Sampling

In the 2021/22 rainy season, 16 samples were collected at NPDES Outfalls 001, 002, 008, 009, 011, and 018. In addition to the compliance samples 73 subarea samples were collected in 2021/22 from BMP performance monitoring sites, potential future BMP subarea locations[14], demolition areas, and background area sampling points. This year 53 BMP performance monitoring samples were collected in the Outfall 009 Watershed, 6 subarea samples were collected in the Area 1 Burn Pit area of Outfall 011 Watershed, 12 samples were collected at subarea locations in the Outfall 001 and 002 watersheds. A full list of sampling locations and monitoring suites can be found in Appendix A; sampling results are discussed in the following sections. Table 5 summarizes individual 2021/22 rainfall events and lists the NPDES outfalls sampled during each event.

2.2.1 NPDES Outfalls

SSFL Outfall discharges are monitored for water quality compliance according to the 2015 NPDES Permit. This past reporting year, 16 total discharge samples were analyzed from Outfalls 001, 002, 008, 009, 011 and 018 combined, as shown in Table 5. Of the 16 stormwater discharge samples analyzed for the suite

[14] "Potential BMP subarea monitoring locations" are defined here as drainage areas to stormwater runoff sampling points that include ISRA, RCRA Facility Investigation (RFI), and/or developed areas (e.g., buildings, parking lots, roads, etc.) such that impacted runoff quality might be expected at the sampling points which could necessitate the future implementation of treatment control BMPs pending evaluations of monitoring results.

of NPDES parameters, there were 4 Benchmark exceedances (at Outfalls 001 and 002) and 7 Permit Limit exceedances (at Outfalls 009, 011, and 018). These exceedances are discussed following Table 5. No sampleable discharge (and thus no opportunities for Permit Limit or Benchmark exceedances) occurred at Outfalls 003, 004, 005, 006, 007, 010, 019, or 020.

Available storage capacities in the Outfall 018 and 011 stormwater ponds were exceeded on 12/30/21, during the largest storm event of the season, which occurred at the end of December 2021 and had a 24-hr storm depth recurrence interval of 25 years. The following summarizes times the BMPs in place at Outfall 011 and Outfall 018 overflowed in the last five years. These dates represent times when the stormwater discharge at these outfalls are partially treated – a mix of stormwater partially treated by settling in the ponds and/or outfall media filter and stormwater fully treated by advanced SWTS. Outfall 011 and 018 BMP overflow events from past years are listed below, with events in 2012-2021 shown in gray. Historically, the systems have overflowed only during exceptionally wet years (2016/17 and 2018/19 received over 130% of average annual rainfall) or during storm events larger than the design storm of 2.5 inches in 24 hours (2018/19 and 2021/22 events). The overflow events that occurred in 2021/22 are consistent with this observed trend.

- Outfall 011 media filter[15] overflowed during the following time frames:
  - 1/22/17 – 1/25-17
  - 2/17/17 until at least 2/25/17[16]
  - 2/2/19 – 2/7/19 (exceeded 24-hr 1-yr design storm depth)
  - 2/14/19 – 2/19/19 (below 24-hr 1-yr design storm depth)
  - 3/6/19 – 3/11/19 (below 24-hr 1-yr design storm depth)
  - 12/30/21 – 1/1/22[17] media filter and perimeter pond overflowed (exceeded 24-hr, 1-yr storm)
- Outfall 018 R-2A Pond[18] (bold font) and/or Silvernale Pond[19] overflowed (i.e., some flows bypassed the SWTS and the media filter was used to treat bypassed flows) during the following time frames:
  - **1/21/17 – 1/24/17** both R-2A Pond and Silvernale Pond overflowed
  - **2/7/17 – 2/9/17** both R-2A Pond and Silvernale Pond overflowed
  - 2/17/17 – 2/23/17 Silvernale overflowed
  - **2/17/17 – 2/25/17** R-2A Pond overflowed
  - **1/17/19** (below 24-hr 1-yr design storm depth) both R-2A Pond and Silvernale Pond overflowed, OF018 media filter was bypassed since it was burned in and removed after Woolsey Fire
  - **2/2/19 – 2/5/19** (exceeded 24-hr 1-yr design storm) both R-2A Pond and Silvernale Pond overflowed, OF018 media filter was bypassed since it was burned in and removed after Woolsey Fire

[15] Maximum storage volume of the media filter is approximately 15,000 gallons.
[16] Actual end flow date unknown due to field error with the flow meter and partial data were recorded on paper hard copies. The last date of flow recorded was 2/25/17.
[17] A berm on the R-1 Pond experienced piping and erosion causing the pond to discharge on 1/1/2022 before exceeding its typical maximum storage volume of 3,740,000 gallons.
[18] R-2A Pond has a maximum storage volume is 2,100,000 gallons.
[19] Silvernale Pond has a maximum storage volume is 5,700,000 gallons.

- 2/11/19 – 2/18/19 (below 24-hr 1-yr design storm depth) Silvernale overflowed
- **12/30/21 – 1/4/22** (exceeded 24-hr, 1-yr storm) R2-A overflowed and 12/30/21 – 1/3/22 Silvernale overflowed

Table 5. NPDES Outfalls –2021/22 Stormwater Discharges and Exceedances

Outfall	Dates of Discharge-Producing Storm Events or SWTS Discharge	Number of Samples Collected (Year Total)	Reported Exceedances

[a] SWTS-treated discharge
[b] SWTS-treated discharge comingled with untreated runoff
[c] Additional sample collected after 7 days of consecutive discharge
[d] The number of reported exceedances (year total) is based on the sum of the exceedances reported in the quarterly reports
[e] Both the original and baseline toxicity tests were conducted outside of the prescribed hold time.
[f] Biochemical Oxygen Demand (BOD) and Chronic Toxicity, Selenastrum analyses were conducted outside of their prescribed hold time and the results were J flagged indicating estimated result that was measured between the method detection limit and reporting limit.

An investigation into the suspected causes of each exceedance is discussed in the following sections and more detail in in Appendix C. Potential sources evaluated included surface soils in or near areas of former operations (RFI Areas), pavement solids, treated wood and nearby soils, and offsite background soils (DTSC Characterization Study). Particulate strength calculations were used to determine if solids concentrations in potential sources are high enough to cause effluent limit or benchmark exceedances in stormwater. PS is the constituent concentration associated with particulate matter in stormwater and is a means to normalize stormwater constituent concentrations by TSS. A summary of the exceeding constituents at each outfall are shown in Table 6 below. The Surface Water Expert Panel developed

recommendations based on their review of these results. This year's recommendations are discussed in Section 5 of this report.

Table 6. Summary of Exceeding Constituents by Outfall

Parameter	Outfall 001	Outfall 002	Outfall 009	Outfall 011	Outfall 018	Total*
Biochemical Oxygen Demand (BOD)	0	0	0	0	1	1
Chronic Toxicity, Selenastrum	0	0	1**	0	0	1
Copper	0	0	1	0	0	1
Iron	1	1	NR	1	1	4
Manganese	1	0	NR	1	0	2
TCDD TEQ (no DNQ)	1	0	0	1	0	2
Total	3	1	2	3	2	11

NR = this parameter does not have a Permit Limit or Benchmark at this outfall

* Note this total reflects exceedances of concentration-based limits at Outfalls 001-018. Mass-based limits at outfalls and offsite Arroyo Simi results were not considered here.

** Both the original and baseline toxicity tests were conducted outside of the prescribed hold time.

2.2.1.1 Outfall 001

During the 2021/22 rainy season, there were two events (one qualifying rain event and one Outfall 011 SWTS discharge) that produced discharge at Outfall 001, with a total of three Benchmark exceedances measured. All measured exceedances occurred in the same sample collected during the 12/22-31/2021 rain event which, with a 25-year 24-hour recurrence interval, was the largest event during the monitoring period. Outfall 001 is located in the Southern Buffer Zone and the majority of the watershed was never subject to industrial uses, however, when stormwater discharges at Outfall 011, Outfall 001 can also receive that runoff. The 2021/22 exceeding sample was collected prior to the start of discharge at Outfall 011, so it is representative of conditions only in the Outfall 001 watershed.

A brief discussion of reported exceedances is as follows; for more information, a thorough analysis of the likely causes of exceedances is available in Appendix C:

- **Iron at Outfall 001:** Iron was detected above its daily maximum Benchmark of 0.3 mg/L once at Outfall 001 at 7.1 mg/L. The source is believed to be background soils, based on three independent lines of evidence: (1) the uniform spatial pattern indicates that all outfalls likely shared the same diffuse, site-wide source of iron in stormwater; (2) the outfall stormwater particulate strengths were in line with background stormwater samples and best explained by background soils out of all the solid source materials tested (although the iron content of the stormwater particulate strengths – which represent suspended solids that are finer sized than undisturbed soils - are higher than the bulk soil samples, likely due to different soil iron concentrations by particle size); and (3) metal ratios (iron to manganese) support natural background soils as the likely source of iron in the exceeding sample.

- **Manganese at Outfall 001:** Manganese was detected above its daily maximum Benchmark of 50 ug/L once at Outfall 001 at 110 ug/L. The source is believed to be background soils, based on three independent lines of evidence: (1) the uniform spatial pattern indicates that all outfalls likely shared the same diffuse, site-wide source of manganese in stormwater; (2) the outfall stormwater particulate strengths were in line with background stormwater samples and best

explained by background soils out of all the solid source materials tested (although the manganese content of the stormwater particulate strengths – which represent suspended solids that are finer sized than undisturbed soils - are higher than the bulk soil samples, likely due to different soil manganese concentrations by particle size); and (3) metal ratios (iron to manganese) support natural background soils as the likely source of manganese in the exceeding sample.

- **TCDD TEQ (no DNQ) at Outfall 001:** TCDD TEQ (no DNQ) was calculated to be above the daily maximum Benchmark of 2.8E-08 ug/L once at Outfall 001 at 2.9E-08 ug/L. The spatial patterns indicate sources contributing to elevated TCDD TEQ (no DNQ) concentrations varied by watershed. A comparison of particulate strengths in stormwater samples and solids concentration in potential source material samples suggests the TCDD TEQ (no DNQ) exceedances in stormwater likely had contributions from pavement solids fines and/or soils near treated wood (pentachlorophenol-treated utility poles). Both have been found to be potent sources of TCDD TEQ (100x exceeding stormwater concentrations) through potential source testing data collected by the Surface Water Expert Panel and Geosyntec. Additionally, impacted soils and background soils could not be ruled out and congener fingerprinting supports majority coming from these sources. Ratios to iron and manganese further supports background soils as a primary contributing source of TCDD TEQ (no DNQ) in the exceeding sample. Recommendations to address this exceedance include removing impacted soils at the Area 1 Burn Pit (i.e., the upcoming Imminent and Substantial Endangerment (ISE) project), evaluating new culvert modification media filters near the western side of the Area 1 Burn Pit that drains to OF001, and relocating pole wattles in pervious areas to capture more pole-impacted soils.

2.2.1.2 Outfall 002

During the 2021/22 rainy season, five events (two qualifying rain events, two SWTS discharges at OF018, and one 7-day follow up sample) produced sampleable discharge at Outfall 002, with one Benchmark exceedance. The exceedances occurred in the sample collected during the 12/22-31/2021 rain event. Outfall 002 is in the Southern Buffer Zone and the majority of the watershed was never subject to industrial uses, however, it also receives runoff from the Outfall 018 watershed when stormwater discharges at Outfall 018. Most discharges at Outfall 018 are fully treated SWTS discharges with the exception of overflow events noted in Section 2.2.1. The exceeding sample at Outfall 002 was collected during SWTS discharge at Outfall 018, representing a mix of treated stormwater from Outfall 018 and stormwater representative of conditions in the Outfall 002 watershed.

A brief discussion of the reported exceedance is as follows; for more information, a thorough analysis of the causes of exceedances is available in Appendix C:

- **Iron at Outfall 002:** Iron was detected above its daily maximum Benchmark of 0.3 mg/L once at Outfall 002 at 2.5 mg/L. The source is believed to be background soils, based on three independent lines of evidence: (1) the uniform spatial pattern indicates that all outfalls likely shared the same diffuse, site-wide source of iron in stormwater; (2) the outfall stormwater particulate strengths were in line with background stormwater samples and best explained by background soils out of all the solid source materials tested (although the iron content of the stormwater particulate strengths – which represent suspended solids that are finer sized than undisturbed soils - are higher than the bulk soil samples, likely due to different soil iron

concentrations by particle size); and (3) metal ratios (iron to manganese) support natural background soils as the likely source of iron in the exceeding sample.

2.2.1.3 Outfall 008

During the 2021/22 rainy season, there was one qualifying rain events that produced sampleable discharge at Outfall 008. No Permit limit exceedances were measured in this sample.

2.2.1.4 Outfall 009

During the 2021/22 rainy season, there were three events (two qualifying rain events and one 7-day follow up sample) that produced sampleable discharge at Outfall 009. Two Permit limit exceedances were measured. Exceedances occurred during the two storm events in December 2021.

A brief discussion of reported exceedances is as follows; for more information, a thorough analysis of the causes of exceedances is available in Appendix C:

- **Copper at Outfall 009:** Copper was detected above its daily maximum Permit Limit of 13 ug/L once at Outfall 009 at 15 ug/L. However, the laboratory reanalyzed the sample and copper was detected at 6.5 ug/L, which is below the effluent Permit Limit of 13 ug/L. The laboratory was not able to reconcile the two results (6.5 ug/L and 15 ug/L), which suggests a potential laboratory error. The spatial patterns indicate sources contributing to elevated copper concentrations were unique to Outfall 009. A comparison of particulate strengths in stormwater samples and solids concentration in potential source material samples was inconclusive and suggests the copper exceedance in stormwater at Outfall 009 could have come from either an unidentified source or is a result of laboratory error. These lines of evidence combined indicate a potential laboratory error is likely. Additional quality assurance measures have been recommended as a response to reduce future lab errors.

- **Chronic Toxicity (Selenastrum) at Outfall 009:** Chronic Toxicity exceeded the Permit Limit of 50% effect once, coming in at 57.25% effect. Based on this sample result, the laboratory initiated the Toxicity Identification Evaluation (TIE) process as part of Boeing's Initial Toxicity Reduction Evaluation (TRE) Work Plan and reanalyzed the sample to establish a baseline for the TIE (Haley & Aldrich, 2015). The baseline toxicity was reported as Pass with a % Effect of 20.49%. Both the original and baseline toxicity tests were conducted outside of the prescribed hold time. Because the chronic toxicity test failed but the baseline toxicity passed, the detection is considered episodic and the TRE process was ended.

2.2.1.5 Outfall 011

During the 2021/22 rainy season, there were two events (one qualifying rain event and one Outfall 011 SWTS discharge) that produced sampleable discharge at Outfall 011 and a total of three Benchmark exceedances were measured. All exceedances occurred in the same sample collected during the 12/22-31/2021 rain event during overflow at Perimeter Pond and are representative of stormwater partially treated by the media filter at the outfall.

A brief discussion of reported exceedances is as follows; for more information, a thorough analysis of the causes of exceedances is available in Appendix C:

- **Iron at Outfall 011:** Iron was detected above its daily maximum Benchmark of 0.3 mg/L once at Outfall 011 at 5.1 mg/L. The source is believed to be background soils, based on three

independent lines of evidence: (1) the uniform spatial pattern indicates that all outfalls likely shared the same diffuse, site-wide source of iron in stormwater; (2) the outfall stormwater particulate strengths were in line with background stormwater samples and best explained by background soils out of all the solid source materials tested (although the iron content of the stormwater particulate strengths – which represent suspended solids that are finer sized than undisturbed soils - are higher than the bulk soil samples, likely due to different soil iron concentrations by particle size); and (3) metal ratios (iron to manganese) support natural background soils as the likely source of iron in the exceeding samples.

- **Manganese at Outfall 011:** Manganese was detected above its daily maximum Benchmark of 50 ug/L once at Outfall 011 at 100 ug/L. The source is believed to be background soils, based on three independent lines of evidence: (1) the uniform spatial pattern indicates that all outfalls likely shared the same diffuse, site-wide source of manganese in stormwater; (2) the outfall stormwater particulate strengths were in line with background stormwater samples and best explained by background soils out of all the solid source materials tested (although the manganese content of the stormwater particulate strengths – which represent suspended solids that are finer sized than undisturbed soils - are higher than the bulk soil samples, likely due to different soil manganese concentrations by particle size); and (3) metal ratios (iron to manganese) support natural background soils as the likely source of manganese in the exceeding samples.

- **TCDD TEQ (no DNQ) at Outfall 011:** TCDD TEQ (no DNQ) was calculated to be above the daily maximum Benchmark of 2.8E-08 ug/L once at Outfall 011 at 3.9E-08 ug/L. The spatial patterns indicate sources contributing to elevated TCDD TEQ (no DNQ) concentrations varied by watershed. A comparison of particulate strengths in stormwater samples and solids concentration in potential source material samples suggests the TCDD TEQ (no DNQ) exceedances in stormwater likely had contributions from pavement solids fines and/or soils near treated wood (pentachlorophenol-treated utility poles). Both have been found to be potent sources of TCDD TEQ (100x exceeding stormwater concentrations) through potential source testing data collected by the Surface Water Expert Panel and Geosyntec. Additionally, impacted soils and background soils could not be ruled out and congener fingerprinting supports majority coming from these sources. Ratios to iron and manganese further supports background soils as a primary contributing source of TCDD TEQ (no DNQ) in the exceeding samples. Recommendations to address this exceedance include repairing the R-1 Pond berm to improve stormwater capture and treatment, removing impacted soils at the Area 1 Burn Pit (i.e., the upcoming Imminent and Substantial Endangerment (ISE) project), and relocating pole wattles in pervious areas to capture more pole-impacted soils.

2.2.1.6 Outfall 018

During the 2021/22 rainy season, there were three events (one SWTS discharge at OF018, one rain event with SWTS discharge comingled with partially treated stormwater at OF018, and one 7-day follow up sample of SWTS discharge) that produced sampleable discharge at Outfall 018 and two Permit Limit exceedances were measured. Both exceeding samples were solely SWTS discharge at Outfall 018.

A brief discussion of the reported exceedance is as follows; for more information, a thorough analysis of the causes of exceedances is available in Appendix C:

- **Iron at Outfall 018:** Iron was detected above its daily maximum Benchmark of 0.3 mg/L once at Outfall 018 at 0.53 mg/L. The exceedance was in a 7-day follow-up sample, reflecting treated SWTS discharge only. Because the particulate strength of the sample was estimated due to TSS not being detected and because this sample is of treated stormwater discharge, it is possible that treatment may have had an effect on the usual lines of evidence used to evaluate exceedance sources. The source of the iron exceedance remains inconclusive. Iron concentrations and particulate strengths will be evaluated in the next SWTS samples to determine if an operational change is needed or if it was a sporadic event.

- **Biological Oxygen Demand (BOD) at Outfall 018:** Biological oxygen demand was measured above its daily maximum Permit Limit of 50 mg/L once at Outfall 018 at 66 mg/L. The exceedance was during a period of SWTS discharge comingled with SWTS-bypassed stormwater and the analysis was conducted outside of its prescribed hold time. Upon a closer review, the laboratory stated this is (likely) a laboratory error for the following reasons: (1) high dissolved oxygen (DO) concentrations typically correlate to a low BOD result, however, at the time of sampling, dissolved oxygen concentrations were near saturated concentrations (7.96 mg/L), and saturated (elevated) DO conditions are inconsistent with elevated BOD and (2) the laboratory ran multiple dilutions, but each dilution yielded contradictory BOD results with the final reported result conducted outside of the holding time. Additionally, BOD has never been detected above 10 mg/L at Outfall 018, including in samples collected prior to the treatment systems. Therefore, based on the historical record and issues identified by the laboratory, this exceedance is likely due to a laboratory error rather than an accurate representation of concentration in the discharge. Additional quality assurance measures have been recommended as a response to reduce future lab errors.

2.2.2 Treatment BMP Performance Monitoring

Although performance monitoring of BMPs is not a direct NPDES Permit requirement, the Surface Water Expert Panel recommended individual BMPs be monitored to assess their ability to remove stormwater COCs before they reach the NPDES outfalls. At the recommendation of the Panel, the frequency of BMP performance monitoring was temporarily reduced to 2 samples per year after 2016/17 and until additional remediation related activities at the Site were resumed. Such activities had not yet resumed as of the 2021/22 rainy season. Performance monitoring of the passive treatment BMPs in the Outfall 009 Watershed was conducted throughout the 2021/22 reporting year as outlined in the *2021/22 Rainy Season Sampling and Analysis Plan (SAP) Updates, Best Management Practice (BMP) Monitoring Program* ("2021/22 SAP") (Appendix A to this report) (HAI, 2021). The SAP is updated annually, with the 2022/23 sampling update forthcoming as discussed in Section 5.2.1. In addition to the passive treatment BMP sampling this year, untreated influent samples were collected at the two active SWTSs in Outfall 011 an 018. The results of these influent samples and corresponding treated discharge at the Outfalls are discussed in Section 4.

Where possible, structural BMPs at the Site are designed to treat the Expert Panel's recommended site-specific design storm, or the 24-hour duration, 1-year recurrence interval storm event of 2.53 inches, where sufficient space is available. Rip rap grade control structures were placed strategically within the 24-hour, 1-year design storm depth of 2.53 inches was exceeded at various times on December 14, 15,

23, 24, 30, and 31, 2021. Overflow of the CM weir boards was recorded via BMP observations at CM-3 during December 23 – 24 and CM-1 on December 30, 2021.

Outfall 009 watershed passive treatment BMP monitoring results are summarized in Table 7 along with copper, lead, mercury, and dioxins results observed above Outfall 009 Permit Limits, noting that BMP monitoring results in excess of Permit Limits are provided solely as a reference for relative water quality since Permit Limits and Benchmarks are only applicable to discharges at NPDES outfalls. Of the 53 BMP performance samples collected in Outfall 009 Watershed subareas, 30 were influent samples, 3 were intermediate samples, 17 were effluent samples, and 3 were non-BMP subarea samples. Of the BMP subarea influent samples, concentrations of copper, lead, mercury, and dioxins were above Permit Limits in 12% (2 of 17), 13% (2 of 16), 4% (1 of 23), and 60% (18 of 30) of the results, respectively. Of the treated BMP effluent samples, copper, lead, mercury, and dioxins limits for NPDES outfalls were surpassed in 0% (0 of 11), 0% (0 of 11), 0% (0 of 12), and 41% (7 of 17) of the results, respectively. These decreases of exceeding concentrations from influent to effluent indicate the BMPs are still working as expected.

An annual BMP Performance Analysis is conducted to evaluate performance of existing treatment control BMPs in the Outfall 009 Watershed using statistical, temporal, and other data analysis approaches. Performance monitoring data collected in 2021/22 has been incorporated into the collective BMP Performance Analysis dataset initiated in December 2009. Out of the numerous constituents analyzed at performance monitoring sample points, the specific COCs total lead, total copper[20], and dioxins (TCDD TEQ no DNQ) were selected for detailed analyses given the number of Permit Limits exceedances initially observed of these COCs at Outfall 009.

As in previous years, the Surface Water Expert Panel has overseen and reviewed the 2021/22 BMP performance analysis, evaluating results in consideration of any new BMP or monitoring recommendations that may be beneficial. Initial results were presented to the Expert Panel in a July 20-22, 2022 workgroup meeting. The Expert Panel then reviewed the draft BMP Performance Analysis report in October 2022. Panel recommendations regarding stormwater BMPs and BMP performance monitoring were developed during the reviews and incorporated into the recommendations presented in Sections 5.1 and 5.2 of this Annual Report. The final BMP performance report, *2021/22 BMP Performance Analysis, Santa Susana Field Laboratory* (Santa Susana Surface Water Expert Panel and Geosyntec Consultants, 2022b), is included as Appendix D. Section 4 discusses its key findings.

In addition to the standard annual BMP performance analysis, two peer-reviewed journal articles were recently published using the extensive BMP performance monitoring data collected at SSFL. The papers, titled *Laboratory Media Test Comparisons to Long-Term Performance of Biofilter and Media Filter Treatment-Train Stormwater Controls* (Pitt, et al., 2021) and *Performance Changes during Long-Term Monitoring of Full-Scale Media Filter Stormwater Controls at an Industrial Site* (Pitt, et al., 2022), were both published in the Journal of Sustainable Water in the Built Environment. These articles demonstrate through rigorous statistical analysis that laboratory column testing of SSFL media mixtures were predictive of full-scale passive treatment BMP performance in the field, that long-term pollutant removal performance of these BMPs continue unchanged in the field despite many years of operation,

[20] Copper is not included as a pollutant of concern for the Outfall 009 watershed in the 2015 Expert Panel Work Plan. However, data for total copper are still presented in the paired line plots.

and that necessary maintenance being conducted at these controls has been successfully predicted based on the initial media laboratory tests.

Table 7. Outfall 009 BMP Performance Stormwater Monitoring Results, 2021/22 Reporting Year

Sampling Location	BMP	Sample Type	Count of Results Above OF009 Permit Limit[1] / Sample Count

[1] Provided for reference – Table 7 Permit Limits apply at Outfall 009 only. NA indicates the analyte was not analyzed

2.2.3 Subarea Monitoring

Subarea stormwater sampling is used to identify potential locations for future BMPs. Subarea sampling was originally initiated in the Outfalls 009 watershed but discontinued after 2018/19 in light of the water quality improvements observed in Outfall 009 discharges.

Subarea samples were collected in the Outfall 001 and 002 Watersheds, considered "buffer zone" watersheds, beginning in 2019/20 to characterize runoff from both natural background areas and potentially impacted areas and facilitate investigations into the causes of repeated Benchmark exceedances in these areas. 12 samples were collected across the 6 subarea sampling locations in 2021/22.

Subarea samples were collected in the Outfall 011 Watershed beginning in 2021/22 to characterize runoff from the Area 1 Burn Pit and inform investigations into the causes of exceedances at Outfall 011. Six samples were collected across the 3 subarea sampling locations in 2021/22.

Subarea monitoring results are summarized in Table 8 below and in more detail in Appendix E.

Table 8. Subarea Stormwater Monitoring Results, 2021/22 Reporting Year

Watershed	Sample Location	Description	Sample Count	Results above NPDES Permit Limit or Benchmark (for reference only, not enforceable at subareas)					
				Cadmium	Copper	Lead	Mercury	TCDD TEQ No DNQ	Zinc
Outfall 001	EPSW001BG01	Non-industrial (Natural background with poles and gravel road)	4	0	4	4	3	4	4
	EPSW001IE01	Potential impacts from Area 1 Burn Pit and CTL-V	2	0	1	1	1	1	1
	EPSW001PV01	Non-industrial (Natural background with poles and paved road)	1	0	0	0	0	1	0
Outfall 002	EPSW002IE01	Potential impacts from STL-V	3	0	1	3	1	3	0
	EPSW002IE02	Potential impacts from Coca	2	0	2	2	1	2	2
Outfall 011	A1BPSW0001	Potential impacts from Area 1 Burn Pit	2	0	0	1	0	0	1
	A1BPSW0002	Potential impacts from Area 1 Burn Pit & gravel road	2	0	2	2	2	1	2
	A1BPSW0003	Potential impacts from Area 1 Burn Pit & gravel road	2	0	2	2	1	1	1

2.2.4 Demolition Subarea Monitoring

Per a 2020 SWEP recommendation to monitor stormwater near areas of demolition, subarea samples were collected to characterize runoff before reaching the Silvernale pond and SWTS for treatment. Following the completion of demolition activities of the Sodium Pump Test Facility (SPTF) in October

2021, two samples were collected on October 25, 2021 and December 14, 2021 and analyzed for metals, dioxins, radionuclides, and general water quality parameters. Concentrations in the stormwater sample collected at the SPTF demo site were above Outfall 018 Permit Limits in one or both samples for the following analytes: Arsenic, Cadmium, Chromium VI, Copper, Lead, Mercury, Zinc, Chronic Toxicity, Detergents (as MBAS), Iron, Manganese, and TCDD TEQ no DNQ. No radionuclides were detected above Outfall 018 Permit Limits in either SPTF subarea sample.

2.3 Northern Drainage Assessment

Recurring site investigations have been performed annually along the Northern Drainage during the 5 years from 2011/12 to 2016/17, as described in in the *Northern Drainage Restoration, Mitigation, and Monitoring Plan* (RMMP) (Haley & Aldrich, 2011).

Although the RMMP expired in 2017, the voluntary annual stream walk and inspection of in-channel erosion risk areas and sediment control conditions in lower portions of the Outfall 009 Watershed were held again on June 21, 2022. Three locations were identified for minor maintenance such as rearranging riprap intended for bank toe stabilization and removing accumulated sediment. No additional stabilization measures or maintenance activities were recommended this year.

2.4 Non-Industrial Sources Special Study

The Surface Water Expert Panel and Geosyntec developed the *Special Monitoring Studies for the 009 Watershed* ("Special Study Work Plan") (Santa Susana Surface Water Expert Panel and Geosyntec Consultants, 2015b), in part to address periodic lead and dioxins exceedances despite the implementation of numerous BMPs targeting former operational areas in the upper 009 watershed. Given previous findings from the BMP subarea monitoring at SSFL that runoff from paved subareas had significantly higher COC concentrations than that from unpaved subareas, regardless of whether impacted soils were known to be present in the drainage areas, the 2015 Special Study Work Plan posed the following questions as the basis for the Non-Industrial Sources Special Study:

1. Where are the predominant spatial locations within the Outfall 009 Watershed 009 contributing to dioxins and lead in stormwater?
2. What are the predominant sources of constituents in paved subareas -- e.g., either weathered or newly resurfaced pavement material itself, vehicles, treated wood utility poles, the historic shooting range area, and/or atmospheric deposition?

In 2017/18 the Expert Panel also recommended offsite sampling as well as sampling for lead isotopes in the Northern Drainage during 2018/19. The most recent lead and dioxins exceedances observed at Outfall 009 were in February 2017 and December 2018, respectively. The Non-Industrial Sources Special Study was again expanded through 2018/19 Annual Report recommendations for the inclusion of additional parameters and potential sources that could be affecting stormwater quality in the Southern Buffer Zone. The frequency and sampling dates of resulting sampling programs are summarized in Table 9. Non-Industrial Sources Special Study monitoring activities and subsequent analyses were completed in 2021/22. Over the course of this study, numerous COCs have been found to exceed Permit Limits in stormwater samples collected from the onsite and offsite background and non-industrial locations to date. A summary report is in progress and will be shared in 2022/23.

Table 9. Non-Industrial Sources Special Study – Monitoring Events Planned and Completed

Activity	Event Frequency	Events Completed/ Scoped	Consti-tuents Analyzed	Completed Event Dates	
Atmospheric Deposition (2 sites)	Monthly	12/12	Lead, Dioxins	6/14/2016 7/14/2016 8/16/2016 9/16/2016 10/17/2016 11/15/2016	12/13/2016 3/14/2017 4/27/2017 5/31/2017 6/28/2017 7/31/2017

Rinsate from Treated Wood Poles (9 samples)	Single sampling event	1/1	Metals, Dioxins	2/14/2022
Treated Wood Pole Chips (6 samples) & Fire Deterrent Mesh Wrap (1 sample)	Single sampling event	1/1	Metals, Dioxins	2/14/2022

Note: shaded rows indicate sampling events during the 2021/22 reporting year

3 BMP Activities

The following sections summarize the construction and demolition activities conducted at SSFL and BMP activities within each watershed (e.g., new BMPs, inspections, maintenance, etc.) in 2021/22.

3.1 Demolition

DOE demolition activities of above ground portions of the Sodium Pump Test Facility (SPTF) were completed in October 2021. Stormwater from this area was sampled as described in Section 2.2.4. Demolition activities were covered by a separate Construction SWPPP, which was reviewed by the Surface Water Expert Panel.

3.2 Recent Activities and Maintenance

Maintenance and other activities conducted at SSFL outfalls and BMPs in 2021/22 included BMP repairs and replacements, removal of sediment and debris from outfalls following large storm events, and inspections of existing erosion and sediment controls and vegetation across the site and repairing or supplementing where needed. They are incorporated by reference through the following quarterly NPDES Discharge Monitoring Reports (DMRs).

- The Boeing Company, 2021a. *Third Quarter 2021 NPDES Discharge Monitoring Report, Compliance File CI-6027 and NPDES No. CA0001309, Santa Susana Field Laboratory, Ventura County, California.* November 15.
- The Boeing Company, 2021b. *Fourth Quarter 2021 NPDES Discharge Monitoring Report, Compliance File CI-6027 and NPDES No. CA0001309, Santa Susana Field Laboratory, Ventura County, California.* February 15.
- The Boeing Company, 2022a. *First Quarter 2022 NPDES Discharge Monitoring Report, Compliance File CI-6027 and NPDES No. CA0001309, Santa Susana Field Laboratory, Ventura County, California.* May 15.
- The Boeing Company, 2022b. *Second Quarter 2022 NPDES Discharge Monitoring Report, Compliance File CI-6027 and NPDES No. CA0001309, Santa Susana Field Laboratory, Ventura County, California.* August 15.

As recommended in the 2020/21 SSFL Site-Wide Stormwater Annual Report (Surface Water Expert Panel and Geosyntec, 2021), the following BMP maintenance, improvement, and monitoring actions were taken this past season in addition to ongoing recommendations listed in Section 4:

- Removed 42 unused treated wood utility poles off Boeing and 12 poles off NASA property, mostly in the Outfall 009 and 011 watersheds, between April-June 2022 as shown in Figure 6.

4 Summary of Key 2021/22 Findings

To conclude the analyses referenced above, the following findings are provided. These findings inform the new BMP and monitoring recommendations that are presented in Section 5.

a. **The passive distributed treatment controls in the Outfall 009 Watershed continue to perform well despite many years of operation.**
Performance monitoring of the distributed treatment controls in the Outfall 009 Watershed demonstrates continued water quality improvement, which supports NPDES compliance at Outfall 009. Historically, most grouped BMP-COC combinations showed a reduction in the average and maximum concentrations of effluent results as compared to the influent results. Overall, constituent loads are being reduced, both because concentrations are being reduced, and because runoff volumes are being reduced by phased upstream pavement and building removal accompanied by revegetation and stormwater runoff attenuation in BMPs. The effluent from the administrative area inlet filters and detention bioswales comingles with untreated stormwater runoff from other areas within the upper Outfall 009 watershed and becomes influent to the lower lot biofilter for additional treatment.

Figure 7 and Figure 8 present summaries of influent and effluent monitoring results for dioxins and lead by BMP group[21]. The Outfall 009 Permit Limit is shown for reference only as it is not applicable at these internal BMP influent and effluent monitoring locations.

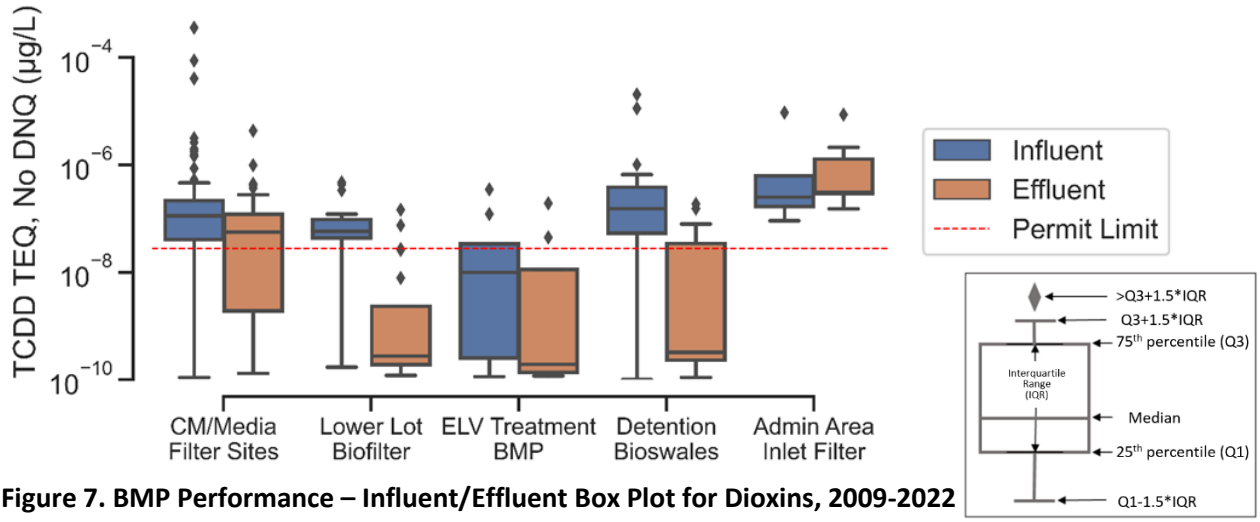

Figure 7. BMP Performance – Influent/Effluent Box Plot for Dioxins, 2009-2022

[21] Box plots identify the medians, interquartile ranges (IQRs) from the 25th-percentile to 75th-percentile values, and the 1.5x quartile values; outliers beyond the 1.5x quartile values are plotted as diamonds.

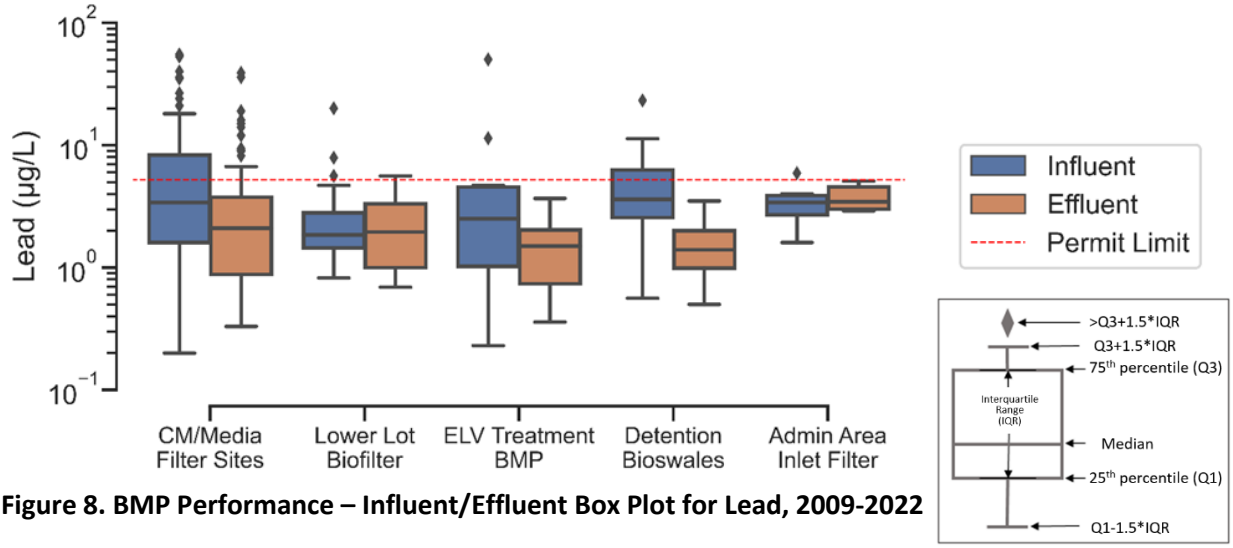

Figure 8. BMP Performance – Influent/Effluent Box Plot for Lead, 2009-2022

b. The two active stormwater treatment systems (SWTSs) are also performing well, as evidenced by compliance results at Outfalls 011 and 018 as well as reductions in concentration observed between untreated SWTS influent and treated Outfall discharge samples.

Untreated stormwater runoff entering the SWTSs was sampled once each at the Outfall 011 and 018 SWTSs and analyzed for the full monitoring suite required at the corresponding NPDES Outfall. Influent sampling at both SWTS is planned to continue in 2022/23 as required in the pending NPDES Permit. Most of the parameter concentrations in the untreated influent samples were below the Permit Limits applicable at the corresponding NPDES Outfall. A summary of SWTS influent results is as follows:

- Oil & Grease, mercury, iron, manganese, and TCDD TEQ (no DNQ) were detected above the Permit Limit in the influent samples at one or both SWTS
- One non-detect result had a detection limit above the applicable threshold (<9.1 ug/l result vs 6 ug/l Permit Limit/MCL for perchlorate)
- Most radionuclides[22] were not detected and those detected were well below Permit Limits
- ***No analytes were detected above CA Primary MCLs in the untreated influent samples***

Effluent concentrations as measured in discharge at Outfall 011 and 018 indicated reductions from influent concentrations. This is summarized for a subset of analytes in Table 10.

Table 10. SWTS Influent and Effluent Comparison

Analyte	Units	Daily Maximum Permit Limit	Outfall 018 SWTS Influent Sample 12/25/2021	Outfall 018 Discharge Sample 12/26/2021	Outfall 011 SWTS Influent Sample 1/10/2022	Outfall 011 Discharge Sample 1/18/2022

[22] Radionuclides analyzed were Gross Alpha, Gross Beta, Combined Radium-226 & Radium-228, Strontium-90, Tritium, Cesium-137, Uranium, and Potassium-40

Analyte	Units	Daily Maximum Permit Limit	Outfall 018 SWTS Influent Sample 12/25/2021	Outfall 018 Discharge Sample 12/26/2021	Outfall 011 SWTS Influent Sample 1/10/2022	Outfall 011 Discharge Sample 1/18/2022
Oil & Grease	mg/L	15	0.74 J	ND < 0.54	710	ND < 0.53
Mercury	µg/L	0.1	0.11 J	ND < 0.12	ND < 0.12	ND < 0.12
Lead	µg/L	5.2	3.2	ND < 0.5	0.87	ND < 0.5
Iron	mg/L	0.3	2.2	ND < 0.05	1.2	0.092
Manganese	µg/L	50	77	15	19 J	25
Perchlorate	µg/L	6.0	ND < 9.1	ND < 0.91	3.9	ND < 0.95
Trichloroethene (TCE)	µg/L	5	ND < 0.17	ND < 0.17	ND < 0.17	ND < 0.17
Gross Alpha	pCi/L	15	4.46+/-2.73	2.1+/-1.82	1.92+/-1.27	0.55+/-1.39
Gross Beta	pCi/L	50	4.17+/-1.75	4.07+/-1.12	3.68+/-0.904	2.81+/-1.01
TCDD TEQ (no DNQ)	µg/L	2.8E-08	6.1E-08	ND	1.3E-08	ND

Note: J indicates the analyte concentration was detected but not quantified due to being between the method detection limit and reporting limit levels. ND indicates the analyte was not detected above the method detection limit.

c. Boeing and NASA continue to implement Surface Water Expert Panel BMP and monitoring recommendations.

As described in Sections 1.3 and 3.2, recommendations from the Surface Expert Panel continue to be implemented at the site in order to continue to improve stormwater quality. A summary of recommendations from the 2020/21 Annual Report and their status to-date are provided in Table 11 and Table 12.

Table 11. Summary of 2020/21 Surface Water Expert Panel BMP Recommendations

Watershed	Recommendation	Status
Sitewide	Continue to involve the Expert Panel on review of all demolition and cleanup SWPPPs site-wide	Completed and ongoing
Sitewide	Continue to monitor the condition of existing erosion and sediment controls and vegetation across the site and repairing or supplementing where needed	Completed and ongoing
Sitewide	Move treated wood utility pole BMPs (wattles, biobags) further from poles to better contain pole-impacted soils	In progress, conducted sampling to inform what distance to recommend
Sitewide	Remove unused treated wood utility poles	First phase completed, additional removal planned
Outfall 009	Observe the newly reconstructed CM-3 to assess its	Completed and ongoing

	performance over time	
Outfall 009	Observe post-storm ponding at CM-9 in the coming year to check for indications of clogging	Completed and ongoing
Outfall 009	Continue to maintain check dams in the Northern Drainage and remove accumulated sediments as needed to preserve their function	Completed and ongoing
Outfall 009	Although the administrative area inlet filters do not appear to be removing lead and dioxins as desired, the Expert Panel has recommended to leave them in place to help as a trash control.	Completed - No action needed

Table 12. Summary of 2020/21 Surface Water Expert Panel Monitoring Recommendations

Program	Recommendation	Status
Stormwater Monitoring	Continue to sample all Outfall 009 BMP performance sites during two events per year	Completed and ongoing
Stormwater Monitoring	Continue to complete full BMP performance inspection checklists for all BMPs which includes visiting each during every storm event to observe whether there is stormwater discharging and again 72 hours after the end of each rain event to observe if any ponded water remains.	Completed with some exceptions, and ongoing
Stormwater Monitoring	Continue subarea monitoring in Outfall 001 and 002 watersheds during all runoff-producing storm events	Completed and ongoing
Stormwater Monitoring	Continue to also analyze for the filtered form of each metal when total metals are already being analyzed in Outfall samples as required by the Permit.	Completed and ongoing
Stormwater Monitoring	Restart background subarea monitoring during all runoff-producing storm events to evaluate natural background contributions of constituents found in stormwater at these Outfalls.	Completed and ongoing
Stormwater Monitoring	Start subarea monitoring in Outfall 011 watershed during all runoff-producing storm events to evaluate stormwater constituent contributions from Area 1 Burn Pit.	Completed and ongoing, reduce to most characteristic location
Northern Drainage	Continue to hold off on monitoring at Northern Drainage subarea sampling locations. If a lead exceedance is measured at Outfall 009, reevaluate monitoring at these locations, or at one site downstream of the shooting range.	Completed, no action needed due to no lead exceedances
Northern Drainage	A continued annual assessment of sediment delivery and erosion along this important reach of drainage is recommended	Completed and ongoing
Special Studies	Analysis of lead isotope sampling results to determine if the former shooting range is contributing lead to Outfall 009.	Completed

Special Studies	Wet weather sheet flow sampling upgradient and downgradient of pentachlorophenol (PCP) treated utility poles with and without BMPs (permeable barriers). The objective is to assess the impact of poles on runoff and the effectiveness of BMPs in reducing metals and dioxins.	Completed
Special Studies	Dry weather step-out sampling of soils upgradient and downgradient of treated wood utility poles. The objective is to determine the area around PCP treated utility poles that is impacted by metals and dioxins, so that BMPs can be effectively implemented.	Completed
Special Studies	Sampling near newly installed fiberglass utility poles in the Southern Buffer to determine if soils remain impacted after replacement.	Completed
Special Studies	Sampling of gross alpha in undeveloped subwatersheds and dioxin in subwatersheds with treated wood poles to better assess background and non-industrial sources to stormwater.	Completed and ongoing

d. Exceedances measured in 2021/22 (none of which exceeded primary drinking water standards) do not change prior stormwater Human Health Risk Assessment conclusions that there are not elevated human health risks from exposure to SSFL stormwater discharge.

This year's exceedance concentrations were within the previous ranges evaluated for the HHRA, with the exception of the 2021/22 copper exceedance at Outfall 009. However, the accuracy of this laboratory result is questioned due to QAQC concerns (as described in previous section 2.2.1) and the measured concentration is approximately 100x below the drinking water action level. Thus, the HHRA conclusions still hold true, that exposure to SSFL stormwater today does not represent an elevated risk to human health through the exposure pathways that were evaluated, which do *not* include drinking stormwater.

An additional evaluation was performed this year to assess human health risks through *drinking water*. While SSFL stormwater is not directly used for drinking water, some of its surface receiving waters may be designated for municipal supply use (or *potential* municipal supply use) or for recharge to groundwater that may be designated for municipal supply use (which would receive soil aquifer treatment, the process of natural contaminant attenuation that occurs as water passes through the vadose zone). Therefore, many of the SSFL Permit Limits and Benchmarks are based on drinking water-based objectives – i.e., primary Maximum Contaminant Levels (MCLs). However, in 2021/22 there were no outfall sample exceedances of the California primary MCLs themselves. **Therefore, SSFL stormwater discharges during the 2021/22 year are not found to represent an elevated risk to human health through drinking.**

5 Recommendations

5.1 BMP Recommendations

The following sections outline the site-wide and watershed-specific BMP recommendations, which are designed to address recent exceedances of Permit Limits and Benchmarks or to continue ongoing special studies. Watershed-specific recommendations are not proposed for the Outfall 002, 008, or 018 watersheds because they are covered in site-wide measures (e.g., erosion control), Outfall 008 did not have any new exceedances, and this year's exceedances at Outfall 002 and 018 were either due to natural soils (iron at Outfall 002 and 018) or were likely due to laboratory QA/QC issues (BOD at Outfall 018).

5.1.1 Site-Wide Recommendations

The Expert Panel recommends:

- continuing to involve the Surface Water Expert Panel on review of all demolition and cleanup SWPPPs site-wide to assess the robustness of the construction BMPs being used during these important source removal projects, including the proposed interim cleanup measures at the former shooting range near the Northern Drainage in the 009 watershed and the Area 1 Burn Pit near Outfall 011;
- implementing any additional Panel-recommended erosion and sediment controls in the Shooting Range and Area 1 Burn Pit areas and inspecting these BMPs (by a construction stormwater BMP expert) prior to initiating the proposed interim cleanups;
- continuing to monitor the condition of existing erosion and sediment controls and vegetation across the site and repairing or supplementing where needed;
- moving treated wood utility pole BMPs (wattles, biobags) 10 ft from poles on pervious surfaces, prioritizing the downgradient direction, to better contain pole-impacted soils;
- evaluating options to enable a faster startup of SWTSs;
- evaluating pond storage volumes (above SWTSs) relative to the 2-year design storm and incremental benefit of increased storage;
- conducting a pond infiltration study, as detailed in Appendix F, to measure infiltration rates in Silvernale and R-1 ponds to address questions raised in public comments on the Permit renewal; and
- modeling design storm scenarios on Watersheds 011 and 018 to evaluate and recommend possible enhanced combined pond storage and treatment flowrate capacity.

5.1.2 Outfall 001 and 011 Watersheds

There were three Benchmark exceedances at Outfall 001 and two Permit Limit exceedances at Outfall 011 in the 2021/22 reporting year. The Expert Panel recommends evaluating the feasibility of the following BMPs in this watershed:

- a culvert modifications where the drainage crosses the gravel road downstream of the west side of the Area I Burn Pits;
- an upland stormwater treatment control measure (e.g., sedimentation basin) that could be useful during future site cleanup around the Area I Burn Pit; and
- repairs to R-1 pond berm.

5.1.1 Outfall 009 Watershed

There were two NPDES exceedances at Outfall 009 in the 2021/22 reporting year, so existing BMPs should continue to be observed and repaired as needed.

Based on cumulative solids loading calculations, it is estimated that CM-9 is nearly due for maintenance. As such, the Expert Panel recommends that post-storm ponding at CM-9 be closely observed in the coming year to check for indications of clogging.

The Expert Panel recommends continuing to maintain check dams in the Northern Drainage and culvert modifications on Sage Ranch and remove accumulated sediments as needed to preserve their function.

5.2 Monitoring Recommendations

The sections below outline recommendations made by the Expert Panel with respect to stormwater monitoring of potential and existing BMP subareas, continuation of as-needed inspections along the Northern Drainage, and potential additions to the non-industrial source special study.

5.2.1 Stormwater Monitoring

Informed by the data analyses contained in this report and its appendices, the Expert Panel recommends the following changes to the *2021/22 Sampling and Analysis Plan (SAP) Updates, Best Management Practice (BMP) Monitoring Program* (Haley & Aldrich, 2021) for the 2022/23 stormwater monitoring season:

- Continue to sample all Outfall 009 BMP performance sites during two events per year. The Panel will revisit all voluntary (i.e., not required by the NPDES Permit) monitoring frequencies when SSFL site remediation activities increase.
- Increase ELV sampling frequency to every storm until the performance of the rebuilt system can be characterized.
- Restart monitoring at the Northern Drainage sampling location immediately downstream of the shooting range during two events per year and increase to every storm event once the former shooting range area cleanup begins (EPNDSW04).
- Discontinue BMP performance monitoring at administrative area inlet filters.
- Continue to complete full BMP performance inspection checklists for all BMPs which includes visiting each BMP during every storm event to observe whether there is stormwater discharging and again 72 hours after the end of the rain event to observe if any ponded water remains.
- Continue to also analyze for the filtered form of each metal when total metals are already being analyzed in Outfall samples as required by the Permit.
- Continue background and non-industrial subarea monitoring at Sage Ranch (BGBMP0003) and offsite locations during all runoff-producing storm events to evaluate natural background and non-industrial contributions of constituents found in local stormwater.
- Continue subarea monitoring to evaluate stormwater constituent contributions from Area 1 Burn Pit in Outfall 001 and Outfall 011 watershed during all runoff-producing storm events (EPSW001IE01 and A1BPSW0001).
- Discontinue subarea monitoring in Outfall 001 and 002 watersheds (except for EPSW001IE01).
- Independently reevaluate laboratory's QAQC plan, use 3rd party blind standards, and run replicates for all analytes on at least one decaport-split sample to assess analytical variability in stormwater.

5.2.2 Northern Drainage

As specified in the RMMP, 2016/17 was the last year of required geomorphic monitoring. As such, near-term monitoring and maintenance continues to focus on NPDES compliance needs only. A continued annual assessment of geomorphic conditions, check structure and bank toe stabilization maintenance needs, and bank erosion along this important reach of drainage is recommended.

5.2.3 Non-Industrial Source Special Study

Initial monitoring activities associated with the Non-Industrial Source Special Study are now completed, as specified in Section 2.4.

6 Key Dates and Activities

6.1 Public Involvement

Numerous stakeholder groups and members of the public have expressed interest in stormwater topics at SSFL during past public engagements and Regional Board hearings. To provide progress updates as well as opportunities for feedback from the public, public forum meetings and site tours with the Surface Water Expert Panel have been held periodically from 2011 through the currently ongoing duration of the 2015 Work Plan. Project status reports and submittal documents have been posted on the Boeing project website following completion of major project milestones and in advance of public outreach meetings. Table 13 summarizes public engagement activities since the development of the 2010 BMP Plan (MWH et al., 2010). This year's public meeting was delayed due to all the activity surrounding the permit renewal and Memorandum of Understanding (MOU) hearings, however, the public meeting and site tour are scheduled for November 17, 2022. A public survey was sent out on October 12, 2022, to gauge topics of public interest and guide development of specific presentation topics by the Surface Water Expert Panel. The annual Surface Water Expert Panel presentation summarizes rainfall and site monitoring activities, BMP performance, results from internal subarea stormwater monitoring, and responses to public questions.

Table 13. Surface Water Expert Panel Public Involvement Activities, 2011-2022

Date	Activity
Planned for November 17, 2022	Public meeting and SSFL tour
August 19, 2021	Public meeting (virtual)
August 11, 2020	Public meeting (virtual)
July 17 2019	Public meeting and SSFL tour
May 9, 2019	Presentation to LARWQCB
May 25, 2018	Public meeting and SSFL tour
August 17, 2017	DIPCON LA Conference SSFL tour
March 21, 2017	Public meeting and SSFL tour
November 19, 2014	Community Action Group meeting
March 20, 2013	Public meeting and SSFL tour
October 6, 2013	Public meeting and SSFL tour
August 25, 2011	Public meeting
January 22, 2011	Public meeting and SSFL tour

6.2 NPDES Permit and Work Plan

The following milestones are planned for the remainder of the NPDES Permit term.

2022/23 and onward

Future Expert Panel activities will be determined based on requirements of the pending NPDES Permit renewal and the Regional Water Quality Control Board's and Boeing's requests for Expert Panel involvement.

6.3 Memorandum of Understanding (MOU) and Cleanup Activities

The following milestones are planned to support the MOU and cleanup activities.

2022/23

The Expert Panel will work closely with Regional Board staff and Geosyntec to develop a sitewide stormwater model as described in the Work Plan[23] (Geosyntec, 2022). Following completion of modeling, a post-cleanup subarea stormwater monitoring plan will be developed to sample areas within Boeing areas of SSFL that have been cleaned up. Offsite and onsite background and non-industrial subarea monitoring will continue in order to build the dataset used to calculate background stormwater thresholds that the post-cleanup monitoring samples will be compared against.

2023/24 and onward

Future Expert Panel activities will be determined by the pace of cleanup actions at the site. The Expert Panel will be involved with recommending and evaluating stormwater BMPs during cleanup and disturbed area stabilization, and with revegetation and confirmation monitoring after cleanup.

[23] The Work Plan was included as Attachment D to the MOU.

Subject: 2021/2022 Rainy Season Sampling and Analysis Plan (SAP) Updates,
Best Management Practice (BMP) Monitoring Program
Santa Susana Field Laboratory
Canoga Park, California

Dear Mr. Zorba and Mr. Wokurka:

This letter presents the Sampling and Analysis Plan (SAP) updates to the Best Management Practice (BMP) subarea and BMP performance monitoring programs near or within the Outfalls 001, 002, 008, 009, and 011 watersheds at the Santa Susana Field Laboratory (SSFL) for the 2021/2022 rainy season, and serves as an addendum to the 2015/2016 and 2016/2017 rainy season SAPs (MWH Americas, Inc. [MWH], 2015; 2016) and the 2017/2018, 2018/2019, 2019/2020, and 2020/2021 SAPs (Haley & Aldrich, Inc. 2018a; 2018b; 2019; and 2020). BMP subarea monitoring is conducted at locations receiving runoff from potential source areas and other infrastructure (e.g., roads, buildings, parking areas) to evaluate the potential for contribution of constituents of concern (COCs) from the potential source areas to stormwater runoff and to identify locations for new BMPs. BMP performance monitoring is conducted at selected structural BMPs (e.g., Lower Parking Lot BMP, B1436 detention bioswales) to assess the effectiveness of the BMPs at promoting sediment settling and improving surface water quality to comply with NPDES benchmarks and permit limits at Outfalls 001, 002, 009, and 011.

The updates to the BMP monitoring program SAP for the 2021/2022 rainy season account for field observations of monitoring locations during the 2020/2021 rainy season and an evaluation of surface water sampling data collected to date. These updates are described below. In addition, attached to this letter are 2021/2022 rainy season versions of the SAP tables, figures and standardized BMP inspection forms. The changes described in this letter were developed with input from, and in accordance with, the recommendations from the SSFL Surface Water Expert Panel (Expert Panel) and Geosyntec

Consultants (Geosyntec) and were initially presented in the 2020/2021 Site-Wide Stormwater Annual Report (Surface Water Expert Panel and Geosyntec Consultants, 2021).

BMP Monitoring Updates

OUTFALL 009

Background subarea monitoring will be reinstated at four locations in the Outfall 009 watershed during the 2021/2022 rainy season.

- Two locations, A1SW0002 and A1SW0006, require only influent sampling, and will characterize background stormwater entering culvert modifications (CM) CM-8 and CM-11, respectively.
- The other two locations are in Sage Ranch Park; BGBMP0003 is within Area 1 just east of LOX, and BGBMP0004 (also previous Special Studies location EPNDSW05) is east of Area 1 and LOX, near the CM-5 tributary drainage.

These background subarea monitoring locations will be sampled every rain event that generates observable runoff, regardless of whether Outfall 009 flows. Samples will be analyzed for parameters as specified in Table I.

OUTFALL 011

A new subarea monitoring location in Outfall 011 watershed, A1BPSW0001, will be added to characterize runoff from the Area 1 Burn Pit (A1BP). This location is situated at the edge of the A1BP and the access road to Outfall 011.

A1BPSW0001 will be sampled every rain event that generates observable runoff from the A1BP during the 2021/2022 rainy season, regardless of whether Outfall 011 flows. Samples will be analyzed for parameters as specified in Table I.

BMP SAMPLING ACTIVITIES CONTINUING FROM THE 2020/2021 SAP

Subarea monitoring within the Outfalls 001 and 002 watersheds were previously established to evaluate sources of constituents found in stormwater at these outfalls. Monitoring will continue at the following locations for every rain event that produces sampleable discharge: EPSW001BG01, EPSW001IE01, EPSW001PV01, EPSW002BG01, EPSW002IE01, and EPSW002IE02. Sampling is required regardless of whether Outfalls 001 or 002 flow.

Monitoring active BMP performance sites within the Outfall 009 watershed will continue to be conducted twice a year, but with new specifications for the timing of each sampling event.

- One sample will be collected during the first discharge-producing rain event.
- The second sample will not be collected until Outfall 009 also flows.

All BMPs do not need to be sampled during the same rain event, but influent and effluent samples from a single BMP must be collected during the same event.

If a lead exceedance is measured at Outfall 009, sampling Northern Drainage subarea monitoring locations or one location downstream of the shooting range will be reevaluated.

The lower lot totalizer reading will be recorded after each pumping event, as feasible.

BMP INSPECTIONS AND FORMS

For active BMP sites within the Outfall 008 and 009 watersheds, the BMP performance inspection checklists will continue to be completed during every rain event exceeding 0.75 inches of rainfall, and once after the rainy season. The BMP Inspection Forms attached to this SAP will be used to document the inspections; these forms include observations, maintenance needs, and corrective actions and were revised in Fall 2021 to reflect current field conditions. As specified on each form, a standardized framed photo should be taken at the same location, facing the same direction, during each inspection.

Seventy-two hours after the end of each rain event exceeding 0.75 inches of rainfall, field crews will also inspect and record maximum ponding levels at locations listed in the Boeing 72 Hours After Rain Event Ponding Inspection Form and NASA 72 Hours After Rain Event Ponding Inspection Form. Both forms are included as attachments to this SAP. The ponding inspection may occur at a time slightly before or after the 72 hours.

CM-9 has approximately one year prior to its expected initial maintenance needs. To check for any indications of clogging during the 2021/2022 rainy season, CM-9 will be closely inspected and observed during each rain event and post-rain period. To assess performance following its recent reconstruction, CM-3 will also be inspected and observed with close attention during each rain event and post-rain period.

The new subarea monitoring location in Outfall 011 will also be inspected using the BMP Inspection and Ponding forms will be completed to record the runoff and ponding patterns in the area.

Sincerely yours,
HALEY & ALDRICH, INC.

EPSW002IE02	Boeing	OF002 Watershed	Impacted Soils Evaluation (Coca)	Potential BMP Location	Located along the Southern Buffer Zone Road at the culvert inlet on the north side of the road. Approx. 400ft east of the turnout.	Every Storm[3]		X		X	X	X			X	X	X	X	X											
A1BPSW0001	Boeing	A1BP	Impacted Soils Evaluation (A1BP)	Potential BMP Location	At edge of A1BP and access road to Outfall 011.	Every Storm[3]		X		X	X	X			X	X	X	X	X											
A1SW0002	Boeing	CM-8	Background	US, Treatment BMP Performance Monitoring	CM-8 upstream, before treatment. Influent sample only.	Every Storm[3]		X		X	X	X	X					X	X	X	X	X	X	X	X	X	X	X	X	X
A1SW0006	Boeing	CM-11	Background	US, Treatment BMP Performance Monitoring	CM-11 upstream, before treatment. Influent sample only.	Every Storm[3]		X		X	X	X	X					X	X	X	X	X	X	X	X	X	X	X	X	X
BGBMP0003	Boeing	Sage Ranch	Background	US, Treatment BMP Performance Monitoring	Sage Ranch near LOX	Every Storm[3]		X		X	X	X	X					X	X	X	X	X	X	X	X	X	X	X	X	X
BGBMP0004	Boeing	Sage Ranch	Background	US, Treatment BMP Performance Monitoring	Sage Ranch - CM-5 tributary drainage east of LOX. Previous Northern Drainage special studies location (EPNDSW05).	Every Storm[3]		X		X	X	X	X					X	X	X	X	X	X	X	X	X	X	X	X	X

Notes:

[1] All BMPs do not need to be sampled during the same rain event, but influent and effluent samples from a single BMP must be collected during the same event.

*[2] One sample should be collected during the **first discharge event** and then wait until OF009 flows to take , the second sample.*

[3] Sampling is required at every discharge-producing rain event, regardless of whether outfalls flow.

** Collect one equipment blank (EB) per sampling day from the equipment used to sample the B1436 Detention Bioswales downstream monitoring location (under drains). Place metals and dioxins analysis on hold; the analyses will be performed if unusual results are reported for primary samples.*

The EB sample ID will be based on the ID of the primary sample collected immediately before collecting the equipment blank, and will be ILQW0007_yyyymmdd.

Happy Valley - Road Leading Down to Lower BMP Area

BMP Performance Inspection Checklist

Client	**The Boeing Company**	Inspection Date	
Project Name	**Santa Susana**	Inspector Name	
County	**Ventura County**	Inspector Company	
State	**California**	Project Manager	
Inspection Type(s)	**Stormwater Inspection**	Precip. Present	

Happy Valley - Road Leading Down to Lower BMP Area

Inspection Status: **Conducted/Not Conducted**

Inspection Checklist Questions:	*Inspection Answers:*
During Rain Event Inspection	
Any odors, suspended materials, floating material, etc. observed?	No/Yes/NA with comment
Are erosion/sediment controls in good condition?	No/Yes/NA with comment
Is the road leading down to BMP area free of erosion?	No/Yes/NA with comment
Are rip rap berms free of sediment/debris?	No/Yes/NA with comment
Are upstream areas free of erosion or sediment?	No/Yes/NA with comment
72 Hours After the End of the Rain Event Inspection	
Any odors, suspended materials, floating material, etc. observed?	No/Yes/NA with comment
Are erosion/sediment controls in good condition?	No/Yes/NA with comment
Is the road leading down to BMP area free of erosion?	No/Yes/NA with comment
Are rip rap berms free of sediment/debris?	No/Yes/NA with comment
Are upstream areas free of erosion or sediment?	No/Yes/NA with comment

Corrective action identified during this inspection event: No/Yes/NA with comment

OF009 CM-9 AILF Area *Inspection Checklist Questions:*	Inspection Status:	**Conducted/Not Conducted** *Inspection Answers:*
During Rain Event Inspection		
Any odors, suspended materials, floating material, etc. observed?		No/Yes/NA with comment
Are erosion/sediment controls in good condition?		No/Yes/NA with comment
Are upstream areas free of erosion or sediment?		No/Yes/NA with comment
Is there flow overtopping the weir board?		No/Yes/NA with comment
If above is YES, does the underdrain appear to be constricted?		No/Yes/NA with comment
If above is YES, please record a video.		N/A
Is the upstream perforated pipeline draining properly?		No/Yes/NA with comment
Is the culvert basin clear of unwanted sediment/debris?		No/Yes/NA with comment
If above is NO, note approximate depth		Depth
Is the inlet swale along Area II Road clear of unwanted sediment/debris?		No/Yes/NA with comment
Is rip rap berm clear of unwanted sediment/debris?		No/Yes/NA with comment
Is any water observed coming out of landfill slope?		No/Yes/NA with comment
Does the CM-9 discharge pipe (north of Area II Road) show any additional signs of erosion?		No/Yes/NA with comment
72 Hours After the End of the Rain Event Inspection		
Any odors, suspended materials, floating material, etc. observed?		No/Yes/NA with comment
Are erosion/sediment controls in good condition?		No/Yes/NA with comment
Are upstream areas free of erosion or sediment?		No/Yes/NA with comment
Are underdrain(s) clear of unwanted sediment/debris?		No/Yes/NA with comment
Is weir board filter fabric in good condition?		No/Yes/NA with comment
Is the culvert basin clear of unwanted sediment/debris?		No/Yes/NA with comment
If above is NO, note approximate depth		Depth
Is a recent high-water mark visible on weir boards?		No/Yes/NA with comment
If above is YES, note approximate depth from top of weir boards		Depth
Is water ponded in front of weir boards?		No/Yes/NA with comment
If above is YES, note approximate depth from top of weir boards		Depth
Is the inlet swale along Area II Road clear of unwanted sediment/debris?		No/Yes/NA with comment
Is rip rap berm clear of unwanted sediment/debris?		No/Yes/NA with comment
Does the CM-9 discharge pipe (north of Area II Road) show any additional signs of erosion?		No/Yes/NA with comment

Corrective action identified during this inspection event: No/Yes/NA with comment

Inspection Checklist Questions:	*Inspection Answers:*
During Rain Event Inspection	
Any odors, suspended materials, floating material, etc. observed?	No/Yes/NA with comment
Are erosion/sediment controls in good condition?	No/Yes/NA with comment
Are upstream areas free of erosion or sediment?	No/Yes/NA with comment
Is there flow overtopping the weir boards?	No/Yes/NA with comment
If above is YES, does the underdrain appear to be constricted?	No/Yes/NA with comment
If above is YES, please record a video.	N/A
Is there sediment accumulation in the culvert basin?	No/Yes/NA with comment
If above is YES, record approximate depth.	Depth
Is there erosion at the diversion pipe outlet?	No/Yes/NA with comment
72 Hours After the End of the Rain Event Inspection	
Any odors, suspended materials, floating material, etc. observed?	No/Yes/NA with comment
Are erosion/sediment controls in good condition?	No/Yes/NA with comment
Are upstream areas free of erosion or sediment?	No/Yes/NA with comment
Is there sediment accumulation in the culvert basin?	No/Yes/NA with comment
If above is YES, record approximate depth.	Depth
Is there erosion at the diversion pipe outlet?	No/Yes/NA with comment
Is a recent high-water mark visible on weir boards?	No/Yes/NA with comment
If above is YES, note approximate depth from top of weir boards	Depth
Is water ponded in front of weir boards?	No/Yes/NA with comment
If above is YES, note approximate depth from top of weir boards	Depth
Are underdrain(s) clear of unwanted sediment/debris?	No/Yes/NA with comment
Is weir board filter fabric in good condition?	No/Yes/NA with comment

Corrective action identified during this inspection event: No/Yes/NA with comment

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Narrative

Job Narrative
440-290654-1

Comments
No additional comments.

Receipt
The samples were received on 10/26/2021 6:18 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 0.5º C, 0.8º C and 1.0º C.

HPLC/IC
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Dioxin
Method 1613B: EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV). The 13C-1,2,3,4-TCDD and 13C-1,2,3,7,8,9-HxCDD associated with the following samples run on instrument 10D5 exceeded this criteria: ILBMP0004_20211025 (440-290654-1), ILBMP0005_20211025 (440-290654-2), ILBMP0008_20211025 (440-290654-3), ILBMP0009_20211025 (440-290654-4), ILBMP0010_20211025 (440-290654-5), LPBMP0002_20211026 (440-290654-6), LPBMP0003_20211026 (440-290654-7), LPBMP0004_20211026 (440-290654-8), EPSW001BG01_20211025 (440-290654-9), (CCV 320-539719/17), (LCS 320-538153/2-A), (LCSD 320-538153/3-A) and (MB 320-538153/1-A). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

Method 1613B: The concentration of one or more analytes associated with the following samples exceeded the instrument calibration range: ILBMP0009_20211025 (440-290654-4) and ILBMP0010_20211025 (440-290654-5). These analytes have been qualified; however, the peaks did not saturate the instrument detector. Historical data indicate that for the isotope dilution method, dilution and re-analysis will not produce significantly different results from those reported above the calibration range.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method FILTRATION: The following samples requested dissolved metals and were not filtered in the field: ILBMP0004_20211025 (440-290654-1), ILBMP0005_20211025 (440-290654-2), ILBMP0008_20211025 (440-290654-3), ILBMP0009_20211025 (440-290654-4), ILBMP0010_20211025 (440-290654-5), LPBMP0002_20211026 (440-290654-6), LPBMP0003_20211026 (440-290654-7), LPBMP0004_20211026 (440-290654-8) and EPSW001BG01_20211025 (440-290654-9). These samples were filtered and preserved upon receipt to the laboratory.

10/27/21@ 10:20
2.5ml HNO3
HNO3 Lot:0000264786

Method 200.8: The method blank for preparation batch 440-659972 and analytical batch 440-660038 contained Iron above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
Method D4464: The sample duplicate precision for the following sample associated with analytical batch 570-192366 was outside control limits: ILBMP0008_20211025 (440-290654-3) and (440-290654-A-3 DU). The associated Laboratory Control Sample / Laboratory Control Sample Duplicate (LCS/LCSD) precision met acceptance criteria.

Job ID: 440-290654-1 (Continued)

Laboratory: Eurofins Calscience Irvine (Continued)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Dioxin Prep
Method 1613B: Elevated reporting limits are provided for the following sample due to insufficient sample provided for preparation: LPBMP0003_20211026 (440-290654-7).
Nominal volume required by method is 1.0 L

preparation batch 320-538153
method: 1613B_Sox_Sep_P
matrix: water

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
BB	Sample > 4X spike concentration

Dioxin

Qualifier	Qualifier Description
EY	Result exceeds normal dynamic range; reported as a min. est.
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL
MB	Analyte present in the method blank
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.

Metals

Qualifier	Qualifier Description
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL
MB	Analyte present in the method blank

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Accreditation/Certification Summary

Client: Haley & Aldrich, Inc.
Project/Site: Boeing SSFL ISRA and BMP

Job ID: 440-290654-1

Laboratory: Eurofins Calscience Irvine

The accreditations/certifications listed below are applicable to this report.

Authority	Program	Identification Number	Expiration Date
California	State	2706	06-30-22

Laboratory: Eurofins Calscience LLC

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Possible Hazard Identification:
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample.
☐ Non-Hazard Flammable ☐ Skin Irritant Poison B ☐ Unknown

Sample Disposal
Return to Client Disposal by Lab Archive for 6 Months

Special Instructions/QC Requirements & Comments.
Please email data to kmiller@haleyaldrich.com and post to Total Access; Bill to Haley & Aldrich at AP@haleyaldrich.com; Report Level II Data Package and provide EDD. All dissolved metal samples are to be filtered within 24 hours of receipt, even those placed on hold.

Note: Since laboratory accreditations are subject to change, Eurofins Calscience places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Calscience laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Calscience attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said complicance to Eurofins Calscience.

Possible Hazard Identification *Unconfirmed*	***Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)*** ☐ *Return To Client* ☐ *Disposal By Lab* ☐ *Archive For _____ Months*

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments
No additional comments.

Receipt
The samples were received on 10/26/2021 6:18 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 0.5º C, 0.8º C and 1.0º C.

RAD
Method 900.0: Gross Alpha batch 536398
Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

EPSW001BG01_20211025 (440-290654-9), (LCS 160-536398/2-A), (MB 160-536398/1-A), (440-290654-H-9-J MS) and (440-290654-H-9-K MSD)

Method 900.0: ABT batch 160-538622: The gross alpha and/or gross beta detection goal was not met for the following samples due to a reduction of the sample size attributed to high residual mass: EPSW001BG01_20211025 (440-290654-9), (280-154901-A-2-C) and (280-154901-A-2-F DU). Analytical results are reported with the detection limit achieved.

Method 900.0: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

EPSW001BG01_20211025 (440-290654-9), (LCS 160-538622/2-A), (LCSB 160-538622/3-A), (MB 160-538622/1-A), (280-154901-A-2-C), (280-154901-A-2-F DU), (280-154901-A-2-D MS) and (280-154901-A-2-E MSBT)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

Rad

Qualifier	Qualifier Description
G	The Sample MDC is greater than the requested RL.
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Accreditation/Certification Summary

Possible Hazard Identification:
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample.
☐ Non-Hazard Flammable ☐ Skin Irritant Poison B ☐ Unknown

Sample Disposal
Return to Client Disposal by Lab Archive for 6 Months

Special Instructions/QC Requirements & Comments.
Please email data to kmiller@haleyaldrich.com and post to Total Access; Bill to Haley & Aldrich at AP@haleyaldrich.com; Report Level II Data Package and provide EDD. All dissolved metal samples are to be filtered within 24 hours of receipt, even those placed on hold.

SAP COC 2019/2020 VERSION 2

440-290654 Chain of Custody

Login Sample Receipt Checklist

Client: Haley & Aldrich, Inc.

Job Number: 440-290654-2

Login Number: 290654
List Number: 1
Creator: Escalante, Maria I

List Source: Eurofins Calscience Irvine

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: Haley & Aldrich, Inc.
Project/Site: Boeing SSFL ISRA and BMP

Job ID: 570-78810-1

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL

Metals

Qualifier	Qualifier Description
BB	Sample > 4X spike concentration
BU	Analyzed out of holding time
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL
LM	MS and/or MSD above acceptance limits. See Blank Spike (LCS)
MB	Analyte present in the method blank

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 570-78810-1

Laboratory: Eurofins Calscience

Narrative

Job Narrative

Comments
No additional comments.

Receipt
The samples were received on 12/14/2021 8:05 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 3.8º C and 4.0º C.

HPLC/IC
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method 200.7 Rev 4.4: The method blank for preparation batch 440-663808 and analytical batch 440-663859 contained Iron above the reporting limit (RL). Associated sample(s) were not re-extracted and/or re-analyzed because results were greater than 10X the value found in the method blank.(MB 440-663808/1-A)

Method 200.7 Rev 4.4: The matrix spike / matrix spike duplicate (MS/MSD) recoveries of Iron for preparation batch 440-663017 and 440-663985 and analytical batch 440-664049 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.(570-78810-H-6-C MS)

Method 245.1: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for Mercurypreparation batch 440-664199 and 440-664200 and analytical batch 440-664223 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 245.1: The following sample was analyzed outside of analytical holding time due to laboratory oversight: EPSW001IE01_20211214 (570-78810-1).

Method FILTRATION: The following samples requested dissolved metals and were not filtered in the field: EPSW002IE01_20211214 (570-78810-2), EPSW002IE02_20211214 (570-78810-3), A1BPSW0001_20211214 (570-78810-4), A1BPSW0002_20211214 (570-78810-5) and A1BPSW0003_20211214 (570-78810-6). These samples were filtered and preserved past the 24 hrs from receipt in the laboratory due to samples received with insufficient time to filter within the HT.

12/15/21 @ 11:10 hours by KE
2.5 mL HNO3
HNO3 Lot # 0000280251

Method FILTRATION: The following samples requested dissolved metals and were not filtered in the field: EPSW001IE01_20211214 (570-78810-1). These samples were filtered and preserved past the 24 hrs from receipt in the laboratory due to Tustin relocation.

12/29/21 @ 09:45 hours
2.5 mL HNO3
HNO3 Lot # 0000280251

Method FILTRATION: The following samples requested dissolved metals and were not filtered in the field: EPSW001IE01_20211214 (570-78810-1). These samples were filtered and preserved past the 24 hrs from receipt in the laboratory due to samples received with insufficient time to filter within the HT.

01/06/21 @ 16:17 hours
2.5 mL HNO3
HNO3 Lot # 0000280251

Job ID: 570-78810-1 (Continued)

Laboratory: Eurofins Calscience (Continued)

Method FILTRATION: The following samples requested dissolved metals and were not filtered in the field: A1BPSW0003_20211214 (570-78810-6). These samples were filtered and preserved past 24 hr upon receipt to the laboratory, due to sample requiring re-filtering.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Refer to Job Narrative for details.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: Haley & Aldrich, Inc.
Project/Site: Boeing SSFL ISRA and BMP

Job ID: 570-78810-2

Qualifiers

Rad

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
G	The Sample MDC is greater than the requested RL.
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 570-78810-2

Laboratory: Eurofins Calscience

Narrative

Job Narrative
570-78810-2

Comments
No additional comments.

Receipt
The samples were received on 12/14/2021 8:05 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 3.8º C and 4.0º C.

RAD
Method 900.0: Gross alpha beta batch 544519
The detection goal was not met for the following sample due to a reduction of the sample size attributed to high residual mass: EPSW002IE02_20211214 (570-78810-3). Analytical results are reported with the detection limit achieved.

Method 900.0: Gross alpha beta batch 544519
The gross (alpha) detection goal(s) was not met. The activity in the samples however exhibit concentrations greater than five (5) times the concentrations observed in the MB), therefore, re-analysis is not required. The data have been reported.

(570-78818-O-1-C)

Method 900.0: Gross alpha beta batch 544519
The matrix spike (MS) recoveries for gross alpha were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits. (570-78818-O-1-D MS)

Method 900.0: Gross alpha beta batch 544519
Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

EPSW001IE01_20211214 (570-78810-1), EPSW002IE01_20211214 (570-78810-2), EPSW002IE02_20211214 (570-78810-3), A1BPSW0001_20211214 (570-78810-4), A1BPSW0002_20211214 (570-78810-5), A1BPSW0003_20211214 (570-78810-6), (LCS 160-544519/2-A), (MB 160-544519/1-A), (570-78818-O-1-C), (570-78818-O-1-F DU) and (570-78818-O-1-D MS)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method Filtration: Filtration_Rad Prep Batch 160-542896:

Sample were received already preserved. PM instructed Pre-Prep to complete Filtration_Rad with preserved samples

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Detection Summary

Client: Haley & Aldrich, Inc.
Project/Site: Boeing SSFL ISRA and BMP

Job ID: 570-78810-2

Client Sample ID: EPSW001IE01_20211214 — Lab Sample ID: 570-78810-1

No Detections.

Client Sample ID: EPSW002IE01_20211214 — Lab Sample ID: 570-78810-2

No Detections.

Preservation Used: 1= Ice, 2= HCl; 3= H2SO4; 4=HNO3; 5=NaOH; 6= Other								1	1	4	4	1	4	4	

Possible Hazard Identification:
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample.
▪ Non-Hazard ▫ Flammable ▪ Skin Irritant ▫ Poison B ▫ Unknown

Sample Disposal
▫ Return to Client ▫ Disposal by Lab ▪ Archive for 6 Months

Special Instructions/QC Requirements & Comments: ECI #44009815
Please email data to kmiller@haleyaldrich.com and post to Total Access; Bill to Haley & Aldrich at AP@haleyaldrich.com; Report Level II Data Package and provide EDD; All dissolved samples are to be filtered within 24 hours of receipt, even those placed on hold.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Refer to Job Narrative for details.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: Haley & Aldrich, Inc.
Project/Site: Boeing SSFL ISRA and BMP

Job ID: 570-78810-3

Qualifiers

Dioxin

Qualifier	Qualifier Description
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL
MB	Analyte present in the method blank
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 570-78810-3

Laboratory: Eurofins Calscience

Narrative

Job Narrative
570-78810-3

Comments
No additional comments.

Receipt
The samples were received on 12/14/2021 8:05 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 3.8º C and 4.0º C.

Dioxin
Method 1613B: EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV). The 13C-1,2,3,4-TCDD associated with the following samples run on instrument 11D2 exceeded this criteria: EPSW001IE01_20211214 (570-78810-1), EPSW002IE01_20211214 (570-78810-2), EPSW002IE02_20211214 (570-78810-3), A1BPSW0001_20211214 (570-78810-4), A1BPSW0002_20211214 (570-78810-5), A1BPSW0003_20211214 (570-78810-6), (CCV 320-555723/2) and (MB 320-553086/1-A). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Dioxin Prep
Method 1613B: Elevated reporting limits are provided for the following samples due to insufficient sample provided for preparation: EPSW001IE01_20211214 (570-78810-1) and EPSW002IE01_20211214 (570-78810-2). Nominal volume is 1L.

preparation batch 320-553086
Method: 1613B_Sox_Sep_P
Matrix: Water

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Refer to Job Narrative for details.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Job ID: 570-78815-1

Qualifiers

Metals

Qualifier	Qualifier Description
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Comments
No additional comments.

Receipt
The samples were received on 12/14/2021 8:05 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 6 coolers at receipt time were 2.7º C, 2.9º C, 3.3º C, 3.4º C, 3.6º C and 3.9º C.

Metals
Method FILTRATION: The following samples requested dissolved metals and were not filtered in the field: A1BMP0002_20211214 (570-78815-1), A1BMP0003_20211214 (570-78815-2), B1BMP0009_20211214 (570-78815-3), B1BMP0010_20211214 (570-78815-4), B1BMP0011_20211214 (570-78815-5), ILBMP0002_20211214 (570-78815-6), ILBMP0004_20211214 (570-78815-7), ILBMP0005_20211214 (570-78815-8), ILBMP0008_20211214 (570-78815-9), ILBMP0009_20211214 (570-78815-10) and ILBMP0010_20211214 (570-78815-11). These samples were filtered and preserved upon receipt to the laboratory.

12/15/21 @ 11:10 hours by KE
2.5 mL HNO3
HNO3 Lot # 0000280251

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Preservation Used: 1= Ice, 2= HCl; 3= H2SO4; 4=HNO3; 5=NaOH; 6= Other

Possible Hazard Identification:
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample.
▫ Non-Hazard ▫ Flammable ▫ Skin Irritant ▫ Poison B ▫ Unknown

Sample Disposal
▫ Return to Client ▫ Disposal by Lab ▪ Archive for 6 Months

Special Instructions/QC Requirements & Comments: ECI #44009815
Please email data to kmiller@haleyaldrich.com and post to Total Access; Bill to Haley & Aldrich at AP@haleyaldrich.com, Report Level II Data Package and provide EDD; All dissolved samples are to be filtered within 24 hours of receipt, even those placed on hold.

Note: Since laboratory accreditations are subject to change, Eurofins Calscience places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Calscience laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Calscience attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said complicance to Eurofins Calscience.

Possible Hazard Identification	Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)
Unconfirmed	☐ Return To Client ☐ Disposal By Lab ☐ Archive For Months

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: Haley & Aldrich, Inc.
Project/Site: Boeing SSFL BMP Performance OF 001,002,009,011

Job ID: 570-78815-2

Qualifiers

Dioxin

Qualifier	Qualifier Description
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL
MB	Analyte present in the method blank
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Comments
No additional comments.

Receipt
The samples were received on 12/14/2021 8:05 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 6 coolers at receipt time were 2.7º C, 2.9º C, 3.3º C, 3.4º C, 3.6º C and 3.9º C.

Dioxin
Method 1613B: EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV). The 13C-1,2,3,4-TCDD and 13C-1,2,3,7,8,9-HxCDD associated with the following samples run on instrument DFS 1 exceeded this criteria: A1BMP0002_20211214 (570-78815-1), A1BMP0003_20211214 (570-78815-2), B1BMP0009_20211214 (570-78815-3), (CCV 320-554787/2), (LCS 320-553366/2-A), (LCSD 320-553366/3-A) and (MB 320-553366/1-A). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

Method 1613B: EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV). The 13C-1,2,3,4-TCDD associated with the following samples run on instrument 11D2 exceeded this criteria: B1BMP0010_20211214 (570-78815-4), B1BMP0011_20211214 (570-78815-5), ILBMP0002_20211214 (570-78815-6), ILBMP0004_20211214 (570-78815-7), ILBMP0005_20211214 (570-78815-8), ILBMP0008_20211214 (570-78815-9), ILBMP0009_20211214 (570-78815-10), ILBMP0010_20211214 (570-78815-11), (CCV 320-555893/2) and (MB 320-553395/1-A). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Dioxin Prep
Method 1613B: Elevated reporting limits are provided for the following sample due to insufficient sample provided for preparation: A1BMP0003_20211214 (570-78815-2). Nominal volume required by method is 1 liter.

preparation batch 320-553366
method: 1613B_Sox_Sep_P
matrix: Water

Method 1613B: Elevated reporting limits are provided for the following samples due to insufficient sample provided for preparation: B1BMP0010_20211214 (570-78815-4), B1BMP0011_20211214 (570-78815-5), ILBMP0004_20211214 (570-78815-7) and ILBMP0010_20211214 (570-78815-11).
Nominal volume required by method is 1.0 L

preparation batch 320-553395
method: 1613B_Sox_Sep_P
matrix: water

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Client: Haley & Aldrich, Inc.
Project/Site: Boeing SSFL BMP Performance OF 001,002,009,011

Job ID: 570-78818-1

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
LG	LG=Surrogate recovery below the acceptance limits

HPLC/IC

Qualifier	Qualifier Description
BB	Sample > 4X spike concentration
EY	Result exceeds normal dynamic range; reported as a min. est.
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL

Metals

Qualifier	Qualifier Description
BA	Relative percent difference out of control
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL
LM	MS and/or MSD above acceptance limits. See Blank Spike (LCS)

General Chemistry

Qualifier	Qualifier Description
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL
LM	MS and/or MSD above acceptance limits. See Blank Spike (LCS)

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
TNTC	Too Numerous To Count

Job ID: 570-78818-1

Laboratory: Eurofins Calscience

Narrative

Job Narrative
570-78818-1

Comments
No additional comments.

Receipt
The samples were received on 12/14/2021 8:05 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 3.4º C and 3.5º C.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC/MS Semi VOA
Method 625.1 SIM: Surrogate recovery for the following sample was outside control limits: EPSW001BG01_20211214 (570-78818-1). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

HPLC/IC
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method 200.8: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for preparation batch 440-663560 and 440-663570 and analytical batch 440-663615 were outside control limits for Manganese. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) was within acceptance limits.

Methods 245.1, 7470A: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for Mercurypreparation batch 440-664059 and analytical batch 440-664187 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method FILTRATION: The following samples requested dissolved metals and were not filtered in the field: EPSW001BG01_20211214 (570-78818-1). These samples were filtered and preserved past the 24 hrs from receipt in the laboratory due to Tustin relocation.

12/29/21 @ 09:45 hours
2.5 mL HNO3
HNO3 Lot # 0000280251

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
Method 625: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 570-201771. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch. 625.1 Sim

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Detection Summary

Client: Haley & Aldrich, Inc.
Project/Site: Boeing SSFL BMP Performance OF 001,002,009,011

Job ID: 570-78818-1

Client Sample ID: EPSW001BG01_20211214 — Lab Sample ID: 570-78818-1

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: Haley & Aldrich, Inc.
Project/Site: Boeing SSFL BMP Performance OF 001,002,009,011

Job ID: 570-78818-2

Qualifiers

Dioxin

Qualifier	Qualifier Description
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL
MB	Analyte present in the method blank
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Laboratory: Eurofins Calscience

Narrative

Job Narrative
570-78818-2

Comments
No additional comments.

Receipt
The samples were received on 12/14/2021 8:05 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 3.4º C and 3.5º C.

Dioxin
Method 1613B: EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV). The 13C-1,2,3,4-TCDD associated with the following samples run on instrument 11D2 exceeded this criteria: EPSW001BG01_20211214 (570-78818-1), (CCV 320-555723/2) and (MB 320-553086/1-A). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Dioxin Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

Metals

Qualifier	Qualifier Description
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL
LM	MS and/or MSD above acceptance limits. See Blank Spike (LCS)

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Narrative

Job Narrative
570-79044-1

Comments
No additional comments.

Receipt
The samples were received on 12/16/2021 4:12 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.5º C.

Metals
Method FILTRATION: The following samples requested dissolved metals and were not filtered in the field: LPBMP0002_20211215 (570-79044-1), LPBMP0003_20211215 (570-79044-2) and LPBMP0004_20211215 (570-79044-3). These samples were filtered and preserved past the 24 hrs from receipt in the laboratory due to Tustin relocation.

12/29/21 @ 14:32 hours and 15:30 hours
2.5 mL HNO3
HNO3 Lot # 0000280251

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
Method D4464: The sample duplicate precision for the following sample associated with analytical batch 570-205144 was outside control limits: LPBMP0002_20211215 (570-79044-1) and (570-79044-E-3 DU). The associated Laboratory Control Sample / Laboratory Control Sample Duplicate (LCS/LCSD) precision met acceptance criteria.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Detection Summary

Client: Haley & Aldrich, Inc.
Project/Site: Boeing SSFL BMP Performance OF 001,002,009,011

Job ID: 570-79044-1

Client Sample ID: LPBMP0002_20211215 — Lab Sample ID: 570-79044-1

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Copper	16		2.0	0.50	ug/L	1		200.8	Total Recoverable

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: Haley & Aldrich, Inc.
Project/Site: Boeing SSFL BMP Performance OF 001,002,009,011

Job ID: 570-79044-2

Qualifiers

Dioxin

Qualifier	Qualifier Description
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL
MB	Analyte present in the method blank
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Comments
No additional comments.

Receipt
The samples were received on 12/16/2021 4:12 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.5º C.

Dioxin
Method 1613B: EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV). The 13C-1,2,3,4-TCDD and 13C-1,2,3,7,8,9-HxCDD associated with the following samples run on instrument DFS 1 exceeded this criteria: LPBMP0002_20211215 (570-79044-1), LPBMP0003_20211215 (570-79044-2), LPBMP0004_20211215 (570-79044-3), (CCV 320-555655/1), (LCS 320-554373/2-A), (LCSD 320-554373/3-A) and (MB 320-554373/1-A). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

Method 1613B: EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV). The 13C-1,2,3,4-TCDD associated with the following samples run on instrument 11D2 exceeded this criteria: LPBMP0004_20211215 (570-79044-3) and (CCV 320-555893/2). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Dioxin Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Note: Since laboratory accreditations are subject to change, Eurofins Calscience places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Calscience laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Calscience attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said complicance to Eurofins Calscience.

Possible Hazard Identification	***Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)***

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: Haley & Aldrich, Inc.
Project/Site: Boeing SSFL ISRA and BMP

Job ID: 570-80269-1

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
EY	Result exceeds normal dynamic range; reported as a min. est.
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL

Metals

Qualifier	Qualifier Description
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL
LM	MS and/or MSD above acceptance limits. See Blank Spike (LCS)

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Narrative

Job Narrative
570-80269-1

Comments
No additional comments.

Receipt
The samples were received on 12/28/2021 6:00 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 2.9º C and 3.3º C.

HPLC/IC
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method 200.7 Rev 4.4: The matrix spike / matrix spike duplicate (MS/MSD) recoveries of Iron for preparation batch 440-663654 and 440-663752 and analytical batch 440-663802 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 200.7 Rev 4.4: The matrix spike / matrix spike duplicate (MS/MSD) recoveries of Iron for preparation batch 440-663922 and analytical batch 440-664049 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.(440-293568-D-2-C MS)

Method FILTRATION: The following samples requested dissolved metals and were not filtered in the field: EPSW001IE01_20211223 (570-80269-1), EPSW002IE01_20211223 (570-80269-2), EPSW002IE02_20211223 (570-80269-3), A1BPSW0001_20211223 (570-80269-4), A1BPSW0002_20211223 (570-80269-5) and A1BPSW0003_20211223 (570-80269-6). These samples were filtered and preserved.past 24 hrs from receipt in the laboratory due to samples received with insufficient
time to filter with the HT.

1/03/2022 08:50 HOURS
2.5 mL HNO3
Lot # 0000280251

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: Haley & Aldrich, Inc.
Project/Site: Boeing SSFL ISRA and BMP

Job ID: 570-80269-1

Laboratory: Eurofins Calscience

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Authority	Program	Identification Number	Expiration Date
California	Los Angeles County Sanitation Districts	10109	09-30-22
California	SCAQMD LAP	17LA0919	11-30-21 *
California	State	2944	09-30-22
Guam	State	21-003R	06-22-22
Nevada	State	CA00111	07-31-22
Oregon	NELAP	CA300001	01-30-22
USDA	US Federal Programs	P330-20-00034	02-10-23
Washington	State	C916-18	10-12-22

Laboratory: Eurofins Calscience Tustin

The accreditations/certifications listed below are applicable to this report.

Authority	Program	Identification Number	Expiration Date
California	State	2706	06-30-22

* Accreditation/Certification renewal pending - accreditation/certification considered valid.

Method Summary

Client: Haley & Aldrich, Inc.
Project/Site: Boeing SSFL ISRA and BMP

Job ID: 570-80269-1

Method	Method Description	Protocol	Laboratory
300.0	Anions, Ion Chromatography	MCAWW	ECL 1
200.7 Rev 4.4	Metals (ICP)	EPA	IRV 2
200.8	Metals (ICP/MS)	EPA	IRV 2

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: Haley & Aldrich, Inc.
Project/Site: Boeing SSFL ISRA and BMP

Job ID: 570-80269-2

Qualifiers

Dioxin

Qualifier	Qualifier Description
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL
MB	Analyte present in the method blank
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 570-80269-2

Laboratory: Eurofins Calscience

Comments
No additional comments.

Receipt
The samples were received on 12/28/2021 6:00 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 2.9º C and 3.3º C.

Receipt Exceptions

The following samples were received at the laboratory outside the required temperature criteria at 11.9C EPSW001IE01_20211223 (570-80269-1), EPSW002IE01_20211223 (570-80269-2), EPSW002IE02_20211223 (570-80269-3), A1BPSW0001_20211223 (570-80269-4), A1BPSW0002_20211223 (570-80269-5) and A1BPSW0003_20211223 (570-80269-6). The second cooler was received on 1/5/22. There were no tags on the cooler because they were attached to the first cooler.

The following sample(s) was listed on the Chain-of-Custody (COC); however, due to a shipping delay, the sample was not received. Only 1 of 2 coolers were received. Missing 7756 2990 7127

The AWB and Copy ICOCs were taped on top of coolers. Cooler 2/2 - 7756 2990 7127 AWB was rolled up an attached to the back of Cooler 1/2. So the 2/2 Cooler has no Identification on the outside. So hoping it is not lost.

1. Both Bottles were received
2. Received the H Bottle
3. Both Bottles were received
2. Received the H Bottle
4. Received the H Bottle
5. Received the H Bottle
6. Received the H Bottle

2. Missing the G Bottle
4. Missing the G Bottle
5. Missing the G Bottle
6. Missing the G Bottle

Dioxin
Method 1613B: EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV). The 13C-1,2,3,4-TCDD associated with the following samples run on instrument 11D2 exceeded this criteria: EPSW002IE01_20211223 (570-80269-2) and (CCV 320-559680/2). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Dioxin Prep
Method 1613B: Elevated reporting limits are provided for the following samples due to insufficient sample provided for preparation: EPSW001IE01_20211223 (570-80269-1), A1BPSW0001_20211223 (570-80269-4) and A1BPSW0003_20211223 (570-80269-6). Nominal volume required by method is 1.0 L

preparation batch 320-556383
method: 1613B_Sox_Sep_P
matrix: water

Job ID: 570-80269-2 (Continued)

Laboratory: Eurofins Calscience (Continued)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Qualifiers

Rad

Qualifier	Qualifier Description
G	The Sample MDC is greater than the requested RL.
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Comments
No additional comments.

Receipt
The samples were received on 12/28/2021 6:00 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 2.9º C and 3.3º C.

Receipt Exceptions

The following samples were received at the laboratory outside the required temperature criteria at 11.9C EPSW001IE01_20211223 (570-80269-1), EPSW002IE01_20211223 (570-80269-2), EPSW002IE02_20211223 (570-80269-3), A1BPSW0001_20211223 (570-80269-4), A1BPSW0002_20211223 (570-80269-5) and A1BPSW0003_20211223 (570-80269-6). The second cooler was received on 1/5/22. There were no tags on the cooler because they were attached to the first cooler.

The following sample(s) was listed on the Chain-of-Custody (COC); however, due to a shipping delay, the sample was not received. Only 1 of 2 coolers were received. Missing 7756 2990 7127

The AWB and Copy ICOCs were taped on top of coolers. Cooler 2/2 - 7756 2990 7127 AWB was rolled up an attached to the back of Cooler 1/2. So the 2/2 Cooler has no Identification on the outside. So hoping it is not lost.

1. Both Bottles were received
2. Received the H Bottle
3. Both Bottles were received
2. Received the H Bottle
4. Received the H Bottle
5. Received the H Bottle
6. Received the H Bottle

2. Missing the G Bottle
4. Missing the G Bottle
5. Missing the G Bottle
6. Missing the G Bottle

RAD
Method 900.0: Gross alpha beta batch 544893
The detection goal was not met for the following samples due to a reduction of the sample size attributed to high residual mass: EPSW001IE01_20211223 (570-80269-1), EPSW002IE01_20211223 (570-80269-2) and EPSW002IE02_20211223 (570-80269-3). Analytical results are reported with the detection limit achieved.

Method 900.0: Gross alpha beta batch 544893
Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

EPSW001IE01_20211223 (570-80269-1), EPSW002IE01_20211223 (570-80269-2), EPSW002IE02_20211223 (570-80269-3), A1BPSW0001_20211223 (570-80269-4), A1BPSW0002_20211223 (570-80269-5), A1BPSW0003_20211223 (570-80269-6), (LCS 160-544893/2-A), (MB 160-544893/1-A), (570-80269-E-6-D MS) and (570-80269-E-6-E MSD)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Job ID: 570-80270-1

Qualifiers

Metals

Qualifier	Qualifier Description
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Comments
No additional comments.

Receipt
The samples were received on 12/28/2021 6:00 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 2.8º C, 3.1º C and 3.3º C.

Receipt Exceptions

One container for the following sample: ILBMP0004_20211224 (#7E) was received broken inside of the cooler. ILBMP0004_20211224 (570-80270-7).

Metals
Method FILTRATION: The following samples requested dissolved metals and were not filtered in the field: A1BMP0002_20211224 (570-80270-1), A1BMP0003_20211224 (570-80270-2), A1BMP0009_20211224 (570-80270-3), B1BMP0010_20211224 (570-80270-4), B1BMP0011_20211224 (570-80270-5), ILBMP0002_20211224 (570-80270-6), ILBMP0004_20211224 (570-80270-7), ILBMP0005_20211224 (570-80270-8), ILBMP0008_20211224 (570-80270-9), ILBMP0009_20211224 (570-80270-10), ILBMP0010_20211224 (570-80270-11) and LXBMP0012_20211224 (570-80270-12). These samples were filtered and preserved.past 24 hrs from receipt in the laboratory due to samples received with insufficient
time to filter with the HT.

1/03/2022 08:50 HOURS
2.5 mL HNO3
Lot # 0000280251

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
Method D4464: Insufficient particulates in sample for analysis.

A1BMP0002_20211224 (570-80270-1), A1BMP0003_20211224 (570-80270-2), A1BMP0009_20211224 (570-80270-3), B1BMP0011_20211224 (570-80270-5) and ILBMP0002_20211224 (570-80270-6)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Preservation Used: 1= Ice, 2= HCl; 3= H2SO4; 4=HNO3; 5=NaOH; 6= Other ____

Possible Hazard Identification:
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the samples in the Comments Section if the lab is to dispose of the sample.

Sample Disposal: ☐ Return to Client ☐ Disposal by Lab ☑ Archive for 6 Months

Special Instructions/QC Requirements & Comments: **ECI #44009815**
Please email data to kmiller@haleyaldrich.com and post to Total Access, Bill to Haley & Aldrich at AP@haleyaldrich.com, Report Level II Data Package and provide EDD; All dissolved samples are to be filtered within 24 hours of receipt, even those placed on hold.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	N/A	Received project as a subcontract.
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: Haley & Aldrich, Inc.
Project/Site: Boeing SSFL ISRA and BMP

Job ID: 570-80270-2

Qualifiers

Dioxin

Qualifier	Qualifier Description
EY	Result exceeds normal dynamic range; reported as a min. est.
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL
MB	Analyte present in the method blank
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 570-80270-2

Narrative

Job Narrative
570-80270-2

Comments
No additional comments.

Receipt
The samples were received on 12/28/2021 6:00 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 2.8º C, 3.1º C and 3.3º C.

Receipt Exceptions

One container for the following sample: ILBMP0004_20211224 (#7E) was received broken inside of the cooler. ILBMP0004_20211224 (570-80270-7).

Dioxin
Method 1613B: The concentration of one or more analytes associated with the following samples exceeded the instrument calibration range: A1BMP0009_20211224 (570-80270-3) and ILBMP0004_20211224 (570-80270-7). These analytes have been qualified; however, the peaks did not saturate the instrument detector. Historical data indicate that for the isotope dilution method, dilution and re-analysis will not produce significantly different results from those reported above the calibration range.

Method 1613B: EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV). The 13C-1,2,3,4-TCDD associated with the following samples run on instrument 11D2 exceeded this criteria: A1BMP0009_20211224 (570-80270-3), (CCV 320-559680/2) and (MB 320-556933/1-A). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Dioxin Prep
Method 1613B: Due to the matrix, the initial volumes used for the following samples deviated from the standard procedure: A1BMP0002_20211224 (570-80270-1), A1BMP0003_20211224 (570-80270-2), A1BMP0009_20211224 (570-80270-3), B1BMP0011_20211224 (570-80270-5), ILBMP0002_20211224 (570-80270-6), ILBMP0004_20211224 (570-80270-7) and ILBMP0005_20211224 (570-80270-8). The reporting limits (RLs) have been adjusted proportionately.

preparation batch 320-556604
matrix:water
method:1613B_Sox_Sep_P

Method 1613B: Elevated reporting limits are provided for the following samples due to insufficient sample provided for preparation: ILBMP0008_20211224 (570-80270-9), ILBMP0009_20211224 (570-80270-10), ILBMP0010_20211224 (570-80270-11) and LXBMP0012_20211224 (570-80270-12).
Nominal volume required by method is 1 liter.

preparation batch 320-556933
method: 1613B_Sox_Sep_P
matrix: Water

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

This Detection Summary does not include radiochemical test results.

Method: 1613B - Dioxins and Furans (HRGC/HRMS)

Client Sample ID: A1BMP0002_20211224
Date Collected: 12/24/21 07:50
Date Received: 12/28/21 18:00

Lab Sample ID: 570-80270-1
Matrix: Water

Preservation Used: 1= Ice, 2= HCl; 3= H2SO4; 4=HNO3; 5=NaOH; 6= Other ____

Possible Hazard Identification:
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the samples in the Comments Section if the lab is to dispose of the sample.

Sample Disposal: ☐ Return to Client ☐ Disposal by Lab ☑ Archive for 6 Months

Special Instructions/QC Requirements & Comments: **ECI #44009815**
Please email data to kmiller@haleyaldrich.com and post to Total Access, Bill to Haley & Aldrich at AP@haleyaldrich.com, Report Level II Data Package and provide EDD; All dissolved samples are to be filtered within 24 hours of receipt, even those placed on hold.

Note: Since laboratory accreditations are subject to change, Eurofins Calscience places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Calscience laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Calscience attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said complicance to Eurofins Calscience.

Possible Hazard Identification: Unconfirmed	Sample Disposal (A fee may be assessed if samples are retained longer than 1 month): ☐ Return To Client ☐ Disposal By Lab ☐ Archive For ____ Months

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: Haley & Aldrich, Inc.
Project/Site: Boeing SSFL ISRA and BMP

Job ID: 570-80272-1

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
BU	Analyzed out of holding time
BV	Sample received after holding time expired

Metals

Qualifier	Qualifier Description
BU	Sample was prepped beyond the specified holding time
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL
MB	Analyte present in the method blank

General Chemistry

Qualifier	Qualifier Description
LM	MS and/or MSD above acceptance limits. See Blank Spike (LCS)

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 570-80272-1

Laboratory: Eurofins Calscience

Narrative

Job Narrative
570-80272-1

Comments
No additional comments.

Receipt
The sample was received on 12/28/2021 6:00 PM. Unless otherwise noted below, the sample arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 4.0º C.

Receipt Exceptions

The number of containers for the following samples did not match the information listed on the Chain-of-Custody (COC): LXBMP001_20211224 (570-80272-1). Received 24 containers, while the COC lists 27.

GC/MS VOA
Method 624.1: Internal standard (ISTD) response for TBA-d9 for the following samples in analytical batch 570-205379 was outside acceptance criteria: LXBMP001_20211224 (570-80272-1) and (CCVIS 570-205379/6). This ISTD does not correspond to any of the requested target compounds reported from this analytical batch; therefore, the data have been reported.

Method 624.1: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-205379.The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

HPLC/IC
Method 300.0: The following sample was received outside of holding time: LXBMP001_20211224 (570-80272-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method 200.2: The reference method requires samples to be preserved to a pH of <2. The following samples were received with insufficient preservation at a pH of >2: Outfall009_20211215_Comp (570-78864-1) and LXBMP001_20211224 (570-80272-1). The sample was preserved to the appropriate pH in the laboratory.

01/07/22 @ 08:36 hours
1.0 mL 1:1 HNO3
1:1 HNO3 # 6803471

Method Filtration: The following sample was not filtered within 15 minutes of sample collection as required by the method: LXBMP001_20211224 (570-80272-1). The sample(s) was filtered prior to analysis at the laboratory, and the results have been reported.

Method 200.8: The method blank for preparation batch 440-664156 and analytical batch 440-664217 contained Iron above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Methods 245.1, 7470A: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for Mercurypreparation batch 440-664074 and analytical batch 440-664187 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the

Job ID: 570-80272-1 (Continued)

Laboratory: Eurofins Calscience (Continued)

associated laboratory control sample (LCS) recovery was within acceptance limits.

Method FILTRATION: The following samples requested dissolved metals and were not filtered in the field: LXBMP001_20211224 (570-80272-1). These samples were filtered and preserved upon receipt to the laboratory past 24 hrs from receipt in the laboratory due to samples received with insufficient time to filter within the HT.

1/05/22 11:30 Hours
2.5 HNO3
HNO3 LOT # 0000280251

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
Method 625: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 570-204641. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch. 625.1 Sim

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Refer to Job Narrative for details.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: Haley & Aldrich, Inc.
Project/Site: Boeing SSFL ISRA and BMP

Job ID: 570-80272-2

Qualifiers

Dioxin

Qualifier	Qualifier Description
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL
MB	Analyte present in the method blank
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 570-80272-2

Laboratory: Eurofins Calscience

Narrative

Job Narrative
570-80272-2

Comments
No additional comments.

Receipt
The sample was received on 12/28/2021 6:00 PM. Unless otherwise noted below, the sample arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 4.0º C.

Receipt Exceptions

The number of containers for the following samples did not match the information listed on the Chain-of-Custody (COC): LXBMP001_20211224 (570-80272-1). Received 24 containers, while the COC lists 27.

Dioxin
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method 200.2: The reference method requires samples to be preserved to a pH of <2. The following samples were received with insufficient preservation at a pH of >2: Outfall009_20211215_Comp (570-78864-1) and LXBMP001_20211224 (570-80272-1). The sample was preserved to the appropriate pH in the laboratory.

01/07/22 @ 08:36 hours
1.0 mL 1:1 HNO3
1:1 HNO3 # 6803471

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Dioxin Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Lab Admin
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Subcontract Work
Method EPA 1631E LL Mercury: This method was subcontracted to Eurofins Frontier Global Sciences LLC. The subcontract laboratory certification is different from that of the facility issuing the final report.

RE: Low Level Hg - 2019

Enclosed are the analytical results for samples received by Eurofins Frontier Global Sciences. All quality control measurements are within established control limits and there were no analytical difficulties encountered with the exception of those listed in the case narrative section of this report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Curtis Deer
Project Manager

SAMPLE RECEIPT

Samples were received at Eurofins Frontier Global Sciences (EFGS) on 04-Jan-22 10:45. The samples were received intact, on-ice within a sealed cooler at

Cooler	Temp C°
Default Cooler	0.5

SAMPLE PREPARATION AND ANALYSIS

Samples were prepared and analyzed for total mercury by flow injection atomic fluorescence spectrometry (FI-AFS) in accordance with EPA 1631E.

ANALYTICAL AND QUALITY CONTROL ISSUES

Method blanks were prepared for every preparation to assess possible blank contribution from the sample preparation procedure. The method blanks were carried through the entire analytical procedure. All blanks fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

Liquid spikes, certified reference material (CRM) or a quality control samples (QCS) were prepared for every preparation as a measure of accuracy. All liquid spikes, CRMs and/or QCS samples fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

As an additional measure of the accuracy of the methods used and to check for matrix interference, matrix spikes (MS) and matrix spike duplicates (MSD) were digested and analyzed. All of the matrix spike recoveries fell within the established acceptance criteria with the exception of any items flagged and described in the notes and definitions section of the report.

A reasonable measure of the precision of the analytical methods is the relative percent difference (RPD) between a matrix spike recovery and a matrix spike duplicate recovery and between laboratory control sample recovery and laboratory control sample duplicate recoveries. All of the relative percent differences fell within established acceptance criteria with the exception of any items flagged and described in the notes and definitions section of the report.

Garden Grove CA, 92841	Project Manager: Virendra Patel	12-Jan-22 15:32

Notes and Definitions

U	Analyte was not detected and is reported as less than the LOD or as defined by the client. The LOD has been adjusted for any dilution or concentration of the sample.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the method detection limit if reported to the MDL or above the reporting limit if reported to the MRL.
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

Job ID: 570-80272-3

Qualifiers

Rad

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
G	The Sample MDC is greater than the requested RL.
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 570-80272-3

Laboratory: Eurofins Calscience

Narrative

Job Narrative
570-80272-3

Comments
No additional comments.

Receipt
The sample was received on 12/28/2021 6:00 PM. Unless otherwise noted below, the sample arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 4.0º C.

Receipt Exceptions

The number of containers for the following samples did not match the information listed on the Chain-of-Custody (COC):
LXBMP001_20211224 (570-80272-1). Received 24 containers, while the COC lists 27.

RAD
Method 900.0: Gross alpha beta batch 544905
The detection goal was not met for the following sample due to a reduction of the sample size attributed to high residual mass:
LXBMP001_20211224 (570-80272-1). Analytical results are reported with the detection limit achieved.

Method 900.0: Gross alpha beta batch 544905
Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.
LXBMP001_20211224 (570-80272-1), (LCS 160-544905/2-A), (LCSB 160-544905/3-A), (MB 160-544905/1-A), (570-80145-R-1-G), (570-80145-R-1-J DU), (570-80145-R-1-H MS) and (570-80145-R-1-I MSBT)

Method 900.0: Gross alpha beta batch 546013
The matrix spike (MS) recoveries for gross alpha were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits. (570-80422-S-1-G MS)

Method 900.0: Gross alpha beta batch 546013
The detection goal was not met for the following samples due to a reduction of the sample size attributed to high residual mass:
(570-80422-S-1-D) and (570-80422-S-1-I DU). Analytical results are reported with the detection limit achieved.

Method 900.0: Gross alpha beta batch 546013
Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

LXBMP001_20211224 (570-80272-1), (LCS 160-546013/2-A), (LCSB 160-546013/3-A), (MB 160-546013/1-A), (570-80422-S-1-D), (570-80422-S-1-I DU), (570-80422-S-1-G MS) and (570-80422-S-1-H MSBT)

Methods 903.0, 9315: Radium 226 batch 544912
Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

The GFPC long monthly backgrounds (ICB) were counted for 800 minutes, but due to current software limitations with the Protean instruments the long monthly backgrounds are calculated at 1000 minutes. This discrepancy has been manually updated, and data is correct, but the raw data printouts still show the incorrect time of 1000 minutes. The ICB raw data includes the correct count time of 800 minutes and counts.

LXBMP001_20211224 (570-80272-1), (LCS 160-544912/1-A), (LCSD 160-544912/2-A) and (MB 160-544912/19-A)

Job ID: 570-80272-3 (Continued)

Laboratory: Eurofins Calscience (Continued)

Methods 904.0, 9320: Radium 228 batch 544914
Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

The GFPC long monthly backgrounds (ICB) were counted for 800 minutes, but due to current software limitations with the Protean instruments the long monthly backgrounds are calculated at 1000 minutes. This discrepancy has been manually updated, and data is correct, but the raw data printouts still show the incorrect time of 1000 minutes. The ICB raw data includes the correct count time of 800 minutes and counts.

LXBMP001_20211224 (570-80272-1), (LCS 160-544914/1-A), (LCSD 160-544914/2-A) and (MB 160-544914/19-A)

Method 905: Strontium 90 batch 544884
Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

The GFPC long monthly backgrounds (ICB) were counted for 800 minutes, but due to current software limitations with the Protean instruments the long monthly backgrounds are calculated at 1000 minutes. This discrepancy has been manually updated, and data is correct, but the raw data printouts still show the incorrect time of 1000 minutes. The ICB raw data includes the correct count time of 800 minutes and counts.

LXBMP001_20211224 (570-80272-1), (LCS 160-544884/1-A), (LCSD 160-544884/2-A) and (MB 160-544884/16-A)

Method 906.0: Tritium in liquid batch 160-544885
Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative.

Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.
LXBMP001_20211224 (570-80272-1), (LCS 160-544885/2-A), (MB 160-544885/1-A), (570-80272-X-1-B DU), (570-80274-V-3-A) and (570-80274-V-3-B MS)

Method LSC_Dist_Susp: Tritium Prep Batch 544885:

The following samples had unclear matrices: LXBMP001_20211224 (570-80272-1). The samples were slightly yellow-orange in color and transparent.

Method PrecSep_0: Radium-228 Prep Batch 160-544914

The following samples were prepared at a reduced aliquot due to Matrix: LXBMP001_20211224 (570-80272-1). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead of a sample duplicate (DUP) to demonstrate batch precision.

Method PrecSep-21: Radium-226 Prep Batch 160-544912

The following samples were prepared at a reduced aliquot due to Matrix: LXBMP001_20211224 (570-80272-1). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead of a sample duplicate (DUP) to demonstrate batch precision.

Method PrecSep-7: Strontium-90 Prep Batch 160-544884

The following samples were prepared at a reduced aliquot due to Matrix: LXBMP001_20211224 (570-80272-1). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead of a sample duplicate (DUP) to demonstrate batch

precision.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method 200.2: The reference method requires samples to be preserved to a pH of <2. The following samples were received with insufficient preservation at a pH of >2: Outfall009_20211215_Comp (570-78864-1) and LXBMP001_20211224 (570-80272-1). The sample was preserved to the appropriate pH in the laboratory.

01/07/22 @ 08:36 hours
1.0 mL 1:1 HNO3
1:1 HNO3 # 6803471

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Detection Summary

Client: Haley & Aldrich, Inc.
Project/Site: Boeing SSFL ISRA and BMP

Job ID: 570-80272-3

Client Sample ID: LXBMP001_20211224 **Lab Sample ID: 570-80272-1**

No Detections.

This Detection Summary does not include radiochemical test results.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Refer to Job Narrative for details.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Definitions/Glossary

Client: Haley & Aldrich, Inc.
Project/Site: Boeing SSFL ISRA and BMP

Job ID: 570-80274-1

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
BU	Analyzed out of holding time
BV	Sample received after holding time expired
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL

Metals

Qualifier	Qualifier Description
BU	Sample was prepped beyond the specified holding time
IB	CCV recovery above limit; analyte not detected
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL
LM	MS and/or MSD above acceptance limits. See Blank Spike (LCS)
MB	Analyte present in the method blank

General Chemistry

Qualifier	Qualifier Description
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL
LM	MS and/or MSD above acceptance limits. See Blank Spike (LCS)

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Narrative

Job Narrative
570-80274-1

Comments
No additional comments.

Receipt
The samples were received on 12/28/2021 6:00 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 2.7º C, 2.9º C and 3.5º C.

Receipt Exceptions

The number of containers for the following samples did not match the information listed on the Chain-of-Custody (COC): EPSW001BG01_20211223 (570-80274-1) and EPSW001PV01_20211223 (570-80274-2). Received 24 containers, while the COC lists 27.

The number of containers for the following samples did not match the information listed on the Chain-of-Custody (COC): EPSW001B003_20211223 (570-80274-3). Received 23 containers, while the COC lists 23.

Received unpreserved 1L plastic instead on 1L plastic w/NaOH for CN: EPSW001PV01_20211223 (570-80274-2).

The laboratory did not receive 1L plastic container w/NaOH for EPA Cyanide analysis that was requested on the Chain-of-Custody on the following sample: EPSW001B003_20211223 (570-80274-3).

GC/MS VOA
Method 624.1: Internal standard (ISTD) response for TBA-d9 for the following samples in analytical batch 570-205379 was outside acceptance criteria: EPSW001BG01_20211223 (570-80274-1), EPSW001PV01_20211223 (570-80274-2), EPSW001B003_20211223 (570-80274-3) and (CCVIS 570-205379/6). This ISTD does not correspond to any of the requested target compounds reported from this analytical batch; therefore, the data have been reported.

Method 624.1: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-205379.The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

HPLC/IC
Method 300.0: The following samples were received outside of holding time: EPSW001BG01_20211223 (570-80274-1), EPSW001PV01_20211223 (570-80274-2) and EPSW001B003_20211223 (570-80274-3).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method Filtration: The following samples were not filtered within 15 minutes of sample collection as required by the method: EPSW001BG01_20211223 (570-80274-1), EPSW001PV01_20211223 (570-80274-2) and EPSW001B003_20211223 (570-80274-3). The sample(s) was filtered prior to analysis at the laboratory, and the results have been reported.

Method 200.7 Rev 4.4: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision of Zinc for preparation batch 440-664527 and analytical batch 440-664607 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) precision was within acceptance limits.

Job ID: 570-80274-1 (Continued)

Laboratory: Eurofins Calscience (Continued)

Method 200.8: The method blank for preparation batch 440-663889 and analytical batch 440-663967 contained Iron above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method 200.8: The method blank for preparation batch 440-663889 and analytical batch 440-664004 contained Iron above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Methods 245.1, 7470A: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for Mercurypreparation batch 440-664074 and analytical batch 440-664187 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method FILTRATION: The following samples requested dissolved metals and were not filtered in the field: EPSW001BG01_20211223 (570-80274-1), EPSW001PV01_20211223 (570-80274-2) and EPSW001B003_20211223 (570-80274-3). These samples were filtered and preserved upon receipt to the laboratory past 24 hrs from receipt in the laboratory due to
samples received with insufficient time to filter within the HT.

1/05/22 11:30 Hours
2.5 HNO3
HNO3 LOT # 0000280251

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
Method 625: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 570-204641. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch. 625.1 Sim

Method D4464: Insufficient particulates in sample for analysis.

EPSW001B003_20211223 (570-80274-3)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Subject: RE: <RESPONSE REQUESTED> Eurofins Calscience report files from 570-80274-1 Boeing SSFL ISRA and BMP

EXTERNAL EMAIL*

1. Please run cyanide from unpreserved bottle.
2. Do we have extra volume from another method (even if unpreserved)?

Subject: <RESPONSE REQUESTED> Eurofins Calscience report files from 570-80274-1 Boeing SSFL ISRA and BMP
Importance: High

CAUTION: External Email

Hello,

Attached please find the report files for job 570-80274-1; Boeing SSFL ISRA and BMP

1. Sample #2 - EPSW001PV01_20211223 -- received Cyanide bottle unpreserved

ACTION: Please provide directoin on how to proceed.

2. Sample #3 - EPSW001B001_20211223 -- we did not receive a Cyanide bottle?

ACTION: Please provide directoin on how to proceed.

Please feel free to contact me if you have any questions.

Thank you.

Virendra Patel

Possible Hazard Identification:
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample.
▫ Non-Hazard ▫ Flammable ▫ Skin Irritant ▫ Poison B ▫ Unknown

Sample Disposal
▫ Return to Client ▫ Disposal by Lab ▪ Archive for 6 Months

Special Instructions/QC Requirements & Comments: ECI #44009815
Please email data to kmiller@haleyaldrich.com and post to Total Access; Bill to Haley & Aldrich at AP@haleyaldrich.com; Report Level II Data Package and provide EDD; All dissolved samples are to be filtered within 24 hours of receipt, even those placed on hold. Low limits needed for Mercury (MDL 0.017 ug/L, RL 0.05 ug/L).

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Refer to Job Narrative for details.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: Haley & Aldrich, Inc.
Project/Site: Boeing SSFL ISRA and BMP

Job ID: 570-80274-2

Qualifiers

Dioxin

Qualifier	Qualifier Description
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL
MB	Analyte present in the method blank
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Comments
No additional comments.

Receipt
The samples were received on 12/28/2021 6:00 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 2.7º C, 2.9º C and 3.5º C.

Dioxin
Method 1613B: EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV). The 13C-1,2,3,4-TCDD and 13C-1,2,3,7,8,9-HxCDD associated with the following samples run on instrument DFS 1 exceeded this criteria: EPSW001BG01_20211223 (570-80274-1), (CCV 320-556660/2), (LCS 320-556042/2-A), (LCSD 320-556042/3-A), (MB 320-556042/1-A) and (WDM 320-556660/1). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

Method 1613B: EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV). The 13C-1,2,3,4-TCDD associated with the following samples run on instrument 11D2 exceeded this criteria: EPSW001BG01_20211223 (570-80274-1) and (CCV 320-557131/2). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Dioxin Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Lab Admin
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

RE: Low Level Hg - 2019

Enclosed are the analytical results for samples received by Eurofins Frontier Global Sciences. All quality control measurements are within established control limits and there were no analytical difficulties encountered with the exception of those listed in the case narrative section of this report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Curtis Deer
Project Manager

SAMPLE RECEIPT

Samples were received at Eurofins Frontier Global Sciences (EFGS) on 07-Jan-22 11:00. The samples were received intact, on-ice within a sealed cooler at

Cooler	Temp C°
Default Cooler	0.7

SAMPLE PREPARATION AND ANALYSIS

Samples were prepared and analyzed for total mercury by flow injection atomic fluorescence spectrometry (FI-AFS) in accordance with EPA 1631E.

ANALYTICAL AND QUALITY CONTROL ISSUES

Method blanks were prepared for every preparation to assess possible blank contribution from the sample preparation procedure. The method blanks were carried through the entire analytical procedure. All blanks fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

Liquid spikes, certified reference material (CRM) or a quality control samples (QCS) were prepared for every preparation as a measure of accuracy. All liquid spikes, CRMs and/or QCS samples fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

As an additional measure of the accuracy of the methods used and to check for matrix interference, matrix spikes (MS) and matrix spike duplicates (MSD) were digested and analyzed. All of the matrix spike recoveries fell within the established acceptance criteria with the exception of any items flagged and described in the notes and definitions section of the report.

A reasonable measure of the precision of the analytical methods is the relative percent difference (RPD) between a matrix spike recovery and a matrix spike duplicate recovery and between laboratory control sample recovery and laboratory control sample duplicate recoveries. All of the relative percent differences fell within established acceptance criteria with the exception of any items flagged and described in the notes and definitions section of the report.

Note: Since laboratory accreditations are subject to change, Eurofins Southwest places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Southwest laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Southwest attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Southwest.

Hello,

Attached please find the report files for job 570-80274-1; Boeing SSFL ISRA and BMP

1. Sample #2 - EPSW001PV01_20211223 -- received Cyanide bottle unpreserved

ACTION: Please provide directoin on how to proceed.

2. Sample #3 - EPSW001B001_20211223 -- we did not receive a Cyanide bottle?

ACTION: Please provide directoin on how to proceed.

Please feel free to contact me if you have any questions.

Thank you.
